This book details the battle one must fight to be an independent thinker, showing how an honest reassessment of what it means to be a professional in today's corporate society can be remarkably liberating. Poignant examples from the world of work reveal the workplace as a battleground for the very identity of the individual. Schmidt contends that professional work is inherently political—that the unstated duty of professionals is to maintain strict "ideological discipline." Career dissatisfaction evolves as workers lose control over the political component of their creative work. After reading this insightful book, no one who works for a living will ever think the same way about their job. Jeff Schmidt lives in Washington, D.C., where he is an editor for Physics Today.

The text analyzes social issues and policies, using the concepts of sociological theory and the everyday language of politics. This text helps students understand the attitudes and values that define the political spectrum in the United States. This is the official account of the experiments carried out at the Hawthorne Works of the Eastern Electric Company in Chicago. These were divided into test room studies, interviewing studies and observational studies. The test room studies were experiments into what variables in a workplace environment might affect worker fatigue. The findings of these tests led to extensive interviewing on the attitudes of the workers. The final phase of the Hawthorne experiment focused on social factors, using techniques of cultural anthropology to observe small working groups. The results of these experiments profoundly influenced the Human Relations movement.

*Introductory Psychology in Modules: Understanding Our Heads, Hearts, and Hands is a unique and comprehensive introduction to psychology. It consists of 36 short modules that keep students engaged with humor, a narrative style, and hands-on activities that facilitate interactive learning and critical thinking. Each stand-alone module focuses on a major topic in psychology, from the brain, sensation, memory, and cognition to human development, personality, social psychology, and clinical psychology. The modular format also allows a deep dive into important topics that have less coverage in other introductory psychology textbooks. This includes cross-cultural psychology, stereotypes and discrimination, evolutionary psychology, sex and gender, climate change, health psychology, and sport psychology. This truly modular format – ideal for both face to face and virtual learning – makes it easy for instructors to customize their readings and assign exactly what they wish to emphasize. The book also contains an abundance of pedagogical features, including numerous hands-on activities and/or group discussion activities, multiple-choice practice quizzes, and an instructor exam bank written by the authors. By covering both classic and contemporary topics, this book will delight students and instructors alike. The modular format also makes this a useful supplementary text for classes in nursing, medicine, social work, policing, and sociology.*

"Raven's 8th edition of Environment offers more detailed content than the Visualizing text for a better understanding and integration of the core environmental systems and to view and analyze the role those systems play. Shorter, but still comprehensive coverage focuses on ethical decision making and key local environmental science issues, requiring readers to think critically about the course material outside of the classroom. Other features include brief text in the comprehensive segment; extensive chapter pedagogy to help reinforce the systems approach; more opportunities to think critically about the how systems intersect and fit together; and new data interpretation questions at the end of each chapter"--
