NEW YORK TIMES BESTSELLER WALL STREET JOURNAL BESTSELLER “Sprint offers a transformative formula for testing ideas that works whether you’re at a startup or a large organization. Within five days, you’ll move from idea to prototype to decision, saving you and your team countless hours and countless dollars. A must read for entrepreneurs of all stripes.” —Eric Ries,

author of The Lean Startup From three partners at Google Ventures, a unique five-day process for solving tough problems, proven at more than a hundred companies. Entrepreneurs and leaders face big questions every day: What's the most important place to focus your effort, and how do you start? What will your idea look like in real life? How many meetings and discussions does it take before you can be sure you have the right solution? Now there's a surefire way to answer these important questions: the sprint.

Designer Jake Knapp created the five-day process at Google, where sprints were used on everything from Google Search to Google X. He joined Braden Kowitz and John Zeratsky at Google Ventures, and together they have completed more than a hundred sprints with companies in mobile, e-commerce, healthcare, finance, and more. A practical guide to answering critical business questions, Sprint is a book for teams of any size, from small startups to Fortune 100s, from teachers to nonprofits. It's for anyone

with a big opportunity, problem, or idea who needs to get answers today.

What's the difference between CEOs like Lou Gerstner of IBM and Larry Ellison of Oracle? Between basketball coaches Phil Jackson and Bobby Knight? Or media entrepreneurs Oprah Winfrey and Rupert Murdoch? Gerstner, Jackson, and Winfrey are provocateurs, leaders

who are successful not just because they have built a company or an organization, but because they have created a community. Provocateurs are changing both the form and the content of leadership and are in sync with a world being turned upside down by technology, the global economy, and the social landscape. Success has traditionally been based on command and control, and the model for many leaders was the general who marshaled people and resources to get the product out the door and onto the shelf. Early in his career, Larry Weber had the opportunity to meet or work with people like Mitch Kapor, the founder of Lotus, and Steve Jobs, the cofounder of Apple. He saw that they were more like the leaders of rock

bands (or the directors of theater groups or circus ringmasters), who encourage innovation and individuality. A rock band does have a leader—think of Mick Jagger and the Rolling Stones—but one who promotes the group and encourages individuality. And when a rival band comes to town, it's not cause for head-to-head competition but an opportunity to increase the size of the pie by creating more fans, or customers, for their genre of music. Provocateurs think and act differently because they put the customer at the center of everything. They are: * Educators like Patrick McGovern, who built IDG into a publishing and research powerhouse by empowering his employees to think globally and act locally; * Entertainers like Jeff

Taylor, who managed to build a bond with Monster.com employees and customers through talent and charisma; * Sherpas like Rick Wagoner, who is guiding General Motors into new territories; * Concierges like Lou Gerstner of IBM, who believe the product is important but so are customer service, delivery, financing, and every other element. They keep everything running smoothly from check-in to check-out. So, if someone says, “Your company is like a circus,” Larry Weber wants you to take it as a compliment. After all, who wouldn’t want to be compared with Cirque du Soleil, an organization that combines creativity, artistry, and caring for its people with success and profit. The people running organizations like

this circus are provocateurs at the cutting edge of business. For a free subscription to the Crown Business E-Newsletter, e-mail CrownBusiness@RandomHouse.com. Visit the Crown Business website at www.CrownBusiness.com.

The book aims to provide a broad overview of various topics of the Internet of Things (IoT) from the research and development priorities to enabling technologies, architecture, security, privacy, interoperability and industrial applications. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC ? Internet of Things European Research Cluster from technology to international cooperation and the global "state of play". The book builds on the ideas put forward by the European research Cluster on the Internet of Things Strategic Research Agenda and presents global views and state of

the art results on the challenges facing the research, development and deployment of IoT at the global level. Today we see the integration of Industrial, Business and Consumer Internet which is bringing together the Internet of People, Internet of Things, Internet of Energy, Internet of Vehicles, Internet of Media, Services and Enterprises in forming the backbone of the digital economy, the digital society and the foundation for the future knowledge and innovation based economy in supporting solutions for the emerging challenges of public health, aging population, environmental protection and climate change, the conservation of energy and scarce materials, enhancements to safety and security and the continuation and growth of economic prosperity. Penetration of smartphones and advances in machine to machine and wireless communication technology will be the main drivers

for IoT development. The IoT contribution is in the increased value of information created by the number of interconnections among things and the transformation of the processed information into knowledge shared into the Internet of Everything. The connected devices are part of ecosystems connecting people, processes, data, and things which are communicating in the cloud using the increased storage and computing power and pushing for standardization of communication and metadata. In this context the next generation of the Cloud technologies will need to be flexible enough to scale autonomously, adaptive enough to handle constantly changing connections and resilient enough to stand up to the huge flows in data that will occur. For 2025 analysts forecast that there will be six devices per human on the planet, which means 50 billion more

connected devices over the next 12 years. The Internet of Things market is connected to this devices growth from industrial machine to machine (M2M) systems, smart meters and wireless sensors. Enabling technologies such as nanoelectronics, MEMS, embedded systems, intelligent device management, smart phones, telematics, smart network infrastructure, cloud computing and software technologies will create new products, new services, new interfaces by creating smart environments and smart spaces with applications ranging from Smart Cities, smart transport, buildings, energy, grid, to smart health and life. User interface (UI) design rules and guidelines, developed by early HCI gurus and recognized throughout the field, were based on cognitive psychology (study of mental processes such as problem solving, memory, and language), and early practitioners were well informed of its tenets. But today practitioners with backgrounds in cognitive psychology are a minority, as user interface designers and developers enter the field from a wide array of disciplines. HCI practitioners today have enough experience in UI design that they
