Harnessing the power of software platforms: what executives and entrepreneurs must know about how to use this technology to transform industries and how to develop the strategies that will create value and drive profits. Software platforms are the invisible engines that have created, touched, or transformed nearly every major industry for the past quarter century. They power everything from mobile phones and automobile navigation systems to search engines and web portals. They have been the source of enormous value to consumers and helped some entrepreneurs build great fortunes. And they are likely to drive change that will dwarf the business and technology revolution we have seen to this point.

Invisible Engines examines the business dynamics and strategies used by firms that recognize the transformative power unleashed by this new revolution—a revolution that will change both new and old industries. The authors argue that in order to understand the successes of software platforms, we must first understand their role as a technological meeting ground where application developers and end users converge. Apple, Microsoft, and Google, for example, charge developers little or nothing for using their platforms and make most of their money from end users; Sony PlayStation and other game consoles, by contrast, subsidize users and make more money from developers, who pay royalties for access to the code they need to write games. More

applications attract more users, and more users attract more applications. And more applications and more users lead to more profits. Invisible Engines explores this story through the lens of the companies that have mastered this platform-balancing act. It offers detailed studies of the personal computer, video game console, personal digital assistant, smart mobile phone, and digital media software platform industries, focusing on the business decisions made by industry players to drive profits and stay a step ahead of the competition. Shorter discussions of Internet-based software platforms provide an important glimpse into a future in which the way we buy, pay, watch, listen, learn, and communicate will change forever. Continued technology innovations, Web 2.0, social networking, app phones and mobility are also stretching traditional banking models to the limit. BANK 2.0 reveals why customer behaviour is so rapidly changing, how branches will evolve, why cheques are disappearing, and why your mobile phone will replace your wallet all within the next 10 years. Mander argues that capitalism is no longer a viable system: "What may have worked in 1900 is calamitous in 2010." Capitalism, utterly dependent on never-ending economic growth, is an impossible absurdity on a finite planet with limited resources. Climate change, together with global food, water, and resource shortages, are only the start. Mander draws attention to capitalism's obsessive need to dominate and undermine democracy, as well as to diminish social and economic equity. Designed to operate free of "morality," the system promotes "permanent war" as a key economic strategy. Worst of all, the problems of capitalism are intrinsic to the form. Many

Now they've turned their research and analysis to a new vital business subject—customer loyalty—with a new book that turns the conventional wisdom on its head. The idea that companies must delight customers by exceeding service expectations is so entrenched that managers rarely even question it. They devote untold time, energy, and resources to trying to dazzle people and inspire their undying loyalty. Yet CEB's careful research over five years and tens of thousands of respondents proves that the “dazzle factor” is wildly overrated—it simply

doesn't predict repeat sales, share of wallet, or positive word-of-mouth. The reality: Loyalty is driven by how well a company delivers on its basic promises and solves day-to-day problems, not on how spectacular its service experience might be. Most customers don't want to be "wowed"; they want an effortless experience. And they are far more likely to punish you for bad service than to reward you for good service. If you put on your customer hat rather than your manager or marketer hat, this makes a lot of sense. This development ensures our corps of engineers obtain the depth of technical acumen that they require, first as discipline engineers and then as Chief Engineers and Lead Systems Engineers, but also the
