sequential networks and finite state machines, together with the essential tools to design and simulate systems composed of a controller and a datapath. The numerous worked examples and solved exercises allow a better understanding and more effective learning. All of the examples and exercises can be run on the Deeds software, freely available online on a webpage developed and maintained by the authors. Thanks to the learning-by-doing approach and the plentiful examples, no prior knowledge in electronics of programming is required. Moreover, the book

can be adapted to different level of education, with different targets and depth, be used for self-study, and even independently from the simulator. The book draws on the authors' extensive experience in teaching and developing learning materials.

The Firmware Handbook provides a comprehensive reference for firmware developers looking to increase their skills and productivity. It addresses each critical step of the development process in detail, including how to optimize hardware design for better firmware.

Preface to the First Edition This textbook is an introduction to Scientific Computing. We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil. We will show how to compute the zeros or the integrals of continuous functions, solve linear systems, approximate functions by polynomials and construct accurate approximations for the solution of differential equations. With

this aim, in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers, vectors and matrices. In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion. We will gradually discover its principal commands, statements and constructs. We will show how to execute all the algorithms that we introduce throughout the book. This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability, accuracy and complexity. We will solve several problems that will be raised through exercises and examples, often stemming from scientific applications.

A passionate climber, he is also an accomplished helicopter pilot and founder of a helicopter rescue program in Nepal. The Call of the Ice was written during Moro ' s dramatic winter attempt on Nanga Parbat in 2012—his twelfth attempt on that mountain—during weather delays and other breaks in the climb. Moro reflects on past climbs and partners, including the death of his longtime friend and climbing partner, Anatoli Boukreev, on Annapurna, his mourning when Boukreev died,

and his subsequent recovery; Denis Urubko and the nature of climbing partnerships; two attempts on Shisha Pangma; Broad Peak; Makalu; and Gasherbrum II, which he, Urubko, and Cory Richards completed in February 2011 despite near-tragic moments when they miraculously escaped after being swept away by an avalanche. Many of Moro ' s climbs do not result in a summit and he explains why his interest lies in the attempt itself. In addition to these reflections, we relive in real-time his attempt on Nanga Parbat, which he and Urubko had to abandon after 51 days and 6600 meters! " I will go in winter. Again. Yes in winter. This book offers an up-to-date review on the principles and practice of multidimensional assessment and management of the older individual, which represents the cornerstone of modern clinical practice in the elderly. The early chapters cover the main elements and scope of the comprehensive geriatric approach and explain the pathways of care from screening and case finding through to in-depth assessment and treatment planning. Subsequent chapters review the evidence of how best to apply the multidimensional assessment and management approach in defined healthcare settings and

within specific clinical areas, such as cancer and surgery. Finally, the education and training challenges are reviewed and the prospects for future clinical service and research in this important field are examined. The book is very timely given the recent advances in application of this approach, which reflect the growing international realization that older people are “core business” in many clinical areas where the role of specialist geriatric medicine has hitherto been limited. Accordingly, the book will be relevant to a wide range of clinicians. The authorship comprises many of the best known and widely published experts in their respective fields. The authors deal not only with finding and using scientific evidence, but also with implementation and evaluation of

interventions that generate new evidence on effectiveness. Each chapter covers the basic issues and provides multiple examples to illustrate important concepts.

In this biography of Enrico Fermi (1901-54), who won the Nobel Prize in physics in 1938 for his work on radioactivity by neutron bombardment and his discovery of transuranic elements and who achieved the first controlled nuclear chain reaction in Chicago in 1942, his student, collaborator, fellow Nobel Prize winner and lifelong friend Emilio Segrè presents the scientist, and explains in nontechnical terms Fermi's work and his achievements. "Segrè's description of Fermi's early life and his involvement with and commitment to physics is extremely interesting... Segrè understands and describes very

clearly the outstanding characteristics of Fermi's theoretical work: clarity and completeness... Segrè has succeeded admirably in describing Fermi's entire scientific career, and this book is strongly recommended." — M. L. Goldberger, *Science* "We must thank Emilio Segrè for this authoritative, revealing and inspiring book. It covers in a masterly fashion the most exciting thirty years of modern physics and the character and activities of one of its greatest contributors." — *Nature* "A rich, well-rounded portrait of [Fermi] the scientist, his methods, intellectual history, and achievements. Explaining in nontechnical terms the scientific problems Fermi faced or solved, *Enrico Fermi, Physicist* contains illuminating material concerning Fermi's youth in Italy and

the development of his scientific style.” — Physics Today
“All that might be hoped for in a biography of one Nobel Prize winner in physics by another has been realized in Emilio Segrè’s biography of his friend, Enrico Fermi... A truly masterly drawing of Fermi’s character, along with his physics and the events through which he moved, Segrè has provided us with a brilliant appreciation of one of the most pre-eminent figures of modern physics.” — Physics Bulletin
“This excellent biography, written by one of the original group who worked with him during the 1930s at Rome, catches beautifully the style and spirit of its subject... With Fermi’s passing the age of the universal experimental and theoretical physicist is gone. Segrè’s book tells the story of this

heroic age of physics and of its principal actor; it is a delight to read, and I recommend it heartily.” — American Scientist

“Here we meet the man at work and we see the meticulous scientist... This book also shows us another facet of Fermi: that of the conscientious scientist torn between his love of pure research and his love of teaching.” — V. Barocas, Annals of Science

“Segrè is a sensitive biographer, responsive to all problems that can plague the creative scientist; he shows, above all, Fermi’s dedication, zeal, and extraordinary talents. Segrè has provided more than sympathy. Much that is new about Fermi’s youth in Italy appears here... [A] very rewarding book... **NEW PRACTICAL METHOD OF FUNCTIONAL
EXERCISES FOR CHOIR**

**This method synthesizes a work I began in 1987 which
involved several vocal ensembles. Above all, I would like to
mention “Gaudium choir” to whom are dedicated most of**

these exercises. This method has been thought as a sort of “ideal journey” that can be done by a choir or vocal ensemble for a period of a decade at least. These exercises have been written with the aim to fill in, until a certain extent, choir-singers technical and musical deficiencies, as my choir has. Many of the singers with whom I have worked, seem to have problems in reading or learning music, in particular in memorizing texts. They were often lacking a sense of rhythm, besides having a musical ear to improve as a result of many intonation problems (ex. diatonic intervals within the same pure octave). Sometimes our amateur choirs, but also professional ones, are lacking in some important parts considered essential for a

musician background however underestimated or even ignored by many choirmasters. I have decided to entitle this book: “New practical method: functional exercises for choir” because each exercise has been thought to improve a specific musical matter as vocal training, musical phrasing and intonation. Exercises are not in a progressive order, as usual, but alternately according to their musical and didactic function. The method shows a sort of “general plan” which can be followed by a choirmaster; however, it can be used also, as a kind of “Reference book”, that I wish can be useful to improve choir musical skills. In my opinion, methods that are structured according to ascending levels of difficulties, are never going to be done

until the end. Usually, the simpler exercises are carefully chosen from the index by students to avoid the most difficult ones, which are obviously omitted. This necessarily means that a student will not improve as much as he could do from his initial stage of knowledge. Each exercise has been thought to solve one by one choir problems and those of a single voice. This manual is divided into four sections: the first part contains vocalizes and preparatory exercises or a series of exercises that can be learned by a group in a very short time if they are practiced with patience, constant effort and methodology. In the second section you can find “Exercises to sung reading on different tempos”. These pieces are written

following the main harmonic-scheme: I-IV-I (2r) V-I of major scale and can be performed also in minor keys as all the other exercises of this method. Voices can be freely moved around to obtain various choral sounds and also many other ways to solve vocal intonation problems of a choir. When a choir-singer will have learned the basic harmonic-scheme he can concentrate on rhythm and different tempos that are going to change for each exercise. In this way, choir singer will improve his reading skills in a natural way. Third section is on “Polyphonic singing”. Based on the same harmonic-scheme, these exercises are at a higher level with a contrapuntal writing inside. Then we get to the “heart” of this method: “Practical exercises for

choir”. It consists in different exercises for choral singing, using specific techniques to raise the level of the choir from both a technical and musical point of view. These techniques combine intonation as psycho-acoustic features, without forgetting a careful ear-training and an effective memorization. Each exercise should be practiced using all possible phonemes. For this reason it is necessary that the choirmaster changes consonants and vowels articulation to solve specific problems of the choir. I hope it is quite clear that the use of consonants and vowels in the exercises, as well as dynamics, are merely intended as suggestions and can be changed at any time. I wish with this method to be able to help any choir to improve and get better. One’s

never have to forget that a chorus is a wonderful, but at the same time, mysterious instrument. Here you can express the deepest feelings of human beings, make closer friends, improve your temperament and much more. At last, I must say, that a choir is mainly a “school of life” that is the highest way to practice “Great music”, without forgetting that is also the most economical one! A delightful intellectual feast from the bestselling author of Seven Brief Lessons on Physics and The Order of Time One of the world's most prominent physicists and fearless free spirit, Carlo Rovelli is also a masterful storyteller. His bestselling books have introduced millions of

readers to the wonders of modern physics and his singular perspective on the cosmos. This new collection of essays reveals a curious intellect always on the move. Rovelli invites us on an accessible and enlightening voyage through science, literature, philosophy, and politics. Written with his usual clarity and wit, this journey ranges widely across time and space: from Newton's alchemy to Einstein's mistakes, from Nabokov's lepidopterology to Dante's cosmology, from mind-altering psychedelic substances to the meaning of

atheism, from the future of physics to the power of uncertainty. Charming, pithy, and elegant, this book is the perfect gateway to the universe of one of the most influential minds of our age. This book concerns digital communication. Specifically, we treat the transport of bit streams from one geographical location to another over various physical media, such as wire pairs, coaxial cable, optical fiber, and radio waves. Further, we cover the mul tiplexing, multiple access, and synchronization issues relevant to constructing com munication networks that

simultaneously transport bit streams from many users. The material in this book is thus directly relevant to the design of a multitude of digital communication systems, including for example local and metropolitan area data networks, voice and video telephony systems, the integrated services digital network (ISDN), computer communication systems, voiceband data modems, and satellite communication systems. We extract the common principles underlying these and other applications and present them in a unified framework. This book is intended for

designers and would-be designers of digital communication systems. To limit the scope to manageable proportions we have had to be selective in the topics covered and in the depth of coverage. In the case of advanced information, coding, and detection theory, for example, we have not tried to duplicate the in-depth coverage of many advanced textbooks, but rather have tried to cover those aspects directly relevant to the design of digital communication systems.
