In his new history of food, acclaimed historian Massimo Montanari traces the development of medieval tastes—both culinary and cultural—from raw materials to market and captures their reflections in today's food trends. Tying the ingredients of our diet evolution to the growth of human civilization, he immerses readers in the passionate debates and bold inventions that transformed food from a simple staple to a potent factor in health and a symbol of social and ideological standing. Montanari returns to the prestigious Salerno school of medicine, the "mother of all medical schools," to plot the theory of food that took shape in the twelfth century. He reviews the influence of the Near Eastern spice routes, which introduced new flavors and cooking techniques to European kitchens, and reads Europe's earliest cookbooks, which took cues from old Roman practices that valued artifice and mixed flavors. Dishes were largely low-fat, and meats and fish were seasoned with vinegar, citrus juices, and wine. He highlights other dishes, habits, and battles that mirror contemporary culinary identity, including the refinement of pasta, polenta, bread, and other flour-based foods; the transition to more advanced cooking tools and formal dining implements; the controversy over cooking with oil, lard, or butter; dietary regimens; and the

consumption and cultural meaning of water and wine. As people became more cognizant of their physicality, individuality, and place in the cosmos, Montanari shows, they adopted a new attitude toward food, investing as much in its pleasure and possibilities as in its acquisition.

This volume examines the aristocracy in Tuscany and in England across a period of two and a half centuries (1000-1250). It deals first with Tuscany, tracing the history of the aristocracy and illustrating its nature and evolution, and observing aristocratic behaviour and attitudes, and how aristocrats related to other members of society. Peter Coss then examines the history of England in the same periods. It is not, however, a comparative history, but employs Italian

insights to look at the aristocracy in England and to move away from the traditional interpretation which revolves around Magna Carta and the idea of English exceptionalism. By offering a study of the aristocracy across a wide time-frame and with themes drawn from Italian historiography, Coss offers a new approach to studying aristocracy within its own contexts.

fabric of power in the kingdom of Italy in the period between the late eleventh century and the early twelfth century. The study analyses the major socio-political change of this period, the crisis of royal and public structures, and the development of seigneurial powers, using as a starting point the structures of power over men and land, and the discourses about the exercise of local power. This period was marked by a rapid reshaping of the structures of local power; while the outbreak of civil wars in the 1080s did not imply a clear-cut rupture with the past, it led to a staggering acceleration of pre-existing dynamics, with a reconfiguration of the matrix of power, in turn expressed in a transformation both of the instruments of local political communications and of the practices of power.

A bold new history of the rise of the medieval Italian commune Amid the disintegration of the Kingdom of Italy in the eleventh and twelfth centuries, a new form of collective government—the commune—arose in the cities of northern and central Italy. Sleepwalking into a New World takes a bold new look at how these autonomous city-states came about, and fundamentally alters our

understanding of one of the most important political and cultural innovations of the medieval world. Chris Wickham provides richly textured portraits of three cities—Milan, Pisa, and Rome—and sets them against a vibrant backcloth of other towns. He argues that, in all but a few cases, the elites of these cities and towns developed one of the first nonmonarchical forms of government in medieval Europe, unaware that they were creating something altogether new. Wickham makes clear that the Italian city commune was by no means a democracy in the modern sense, but that it was so novel that outsiders did not know what to make of it. He describes how, as the old order unraveled, the communes emerged, governed by consular elites "chosen by the people," and subject to neither emperor nor king. They regularly fought each other, yet they grew organized and confident enough to ally together to defeat Frederick Barbarossa, the German emperor, at the Battle of Legnano in 1176. *Sleepwalking into a New World* reveals how the development of the autonomous city-state took place, which would in the end make possible the robust civic culture of the Renaissance.

Homo sapiens, homo pugnans, and so it has been since the beginning of recorded history. In the Middle Ages, especially, armed conflict and the military life were so much a part of the political and cultural development that a general account of this period is, in large measure, a description of how men went to

war.

Integrating the written sources with Rome's surviving remains and, most importantly, with the results of the past half-century's worth of medieval archaeology in the city, *The Making of Medieval Rome* is the first in-depth profile of Rome's transformation over a millennium to appear in any language in over forty years. Though the main focus rests on Rome's urban trajectory in topographical, architectural, and archaeological terms, Hendrik folds aspects of ecclesiastical, political, social, military, economic, and intellectual history into the narrative in order to illustrate how and why the cityscape evolved as it did during the thousand years between the end of the Roman Empire and the start of the Renaissance. A wide-ranging synthesis of decades' worth of specialized research and remarkable archaeological discoveries, this book is essential reading for anyone interested in how and why the ancient imperial capital transformed into the spiritual heart of Western Christendom.

In recent years historical studies on adoption and fosterage have greatly advanced, very likely due to the importance that such practices have acquired in our own societies. Also in the past – not only during Roman or Late Antique periods, but throughout the Middle Ages and the Modern Era as well – a rather significant number of family units went through adoption and fosterage, experiencing these kinds of ties and relationships on the daily basis. Articles collected in this volume are aimed at analysing the various forms and methods by means of which the concept of “adoption” was interpreted and practiced during the Medieval and Early Modern periods,

identifying especially relevant chronological points, examples from different regional and local contexts, reciprocal influences, and family relationships shaped by adoption.

'Medieval Rome' analyses the history of the city of Rome between 900 and 1150, a period of major changes in the city.

It takes the urban economy, the social history of the different strata of society, the articulation between the city's regions and the cultural identity of Rome as seen in its processions, its material culture, its legal transformations and its sense of the past. These are the underpinnings of a major reinterpretation of the city's political history in the era of the 'reform papacy', one of the greatest crises in Rome's history.

encyclopedia examines all aspects of warfare and military technology in medieval times. Featuring the latest research from the leading experts in medieval military history, the set provides an exhaustive and accurate view of how and why wars were waged throughout Europe, the Byzantine Empire, and the Crusader States from circa 500 CE to circa 1500. Although many reference works have been published in medieval history, this is the first and only encyclopedia to focus exclusively on medieval warfare, offering unique insight into the subject by addressing developments in military technology across the period with articles on topics such as gunpowder and shields. The encyclopedia will appeal to scholars and readers of all levels interested in military history and in the medieval world.

Medieval Sovereignty examines the idea of sovereignty in the Middle Ages and asks if it can be considered a fundamental element of medieval constitutional order. Francesco Maiolo analyzes the writings of Marsilius of Padua (1275/80–1342/43) and Bartolous of Saxoferrato (1314–57) and assesses their relative contributions as early proponents of popular sovereignty. Both are credited with having provided the legal justification for medieval popular government. Maiolo's cogent reconsideration of this primacy is an important addition to current medieval studies. Based on papers presented at the 41st Conference on Editorial Problems held at the University of Toronto, Toronto, Ont., from Nov. 6 - 8th, 2005.

comprehensive analysis of sanctity and pilgrimage in southern Italy between 1000 and 1200, Paul Oldfield presents a fascinating picture of a politically and culturally fragmented land which, as well as hosting its own important relics as important pilgrimage centres, was a transit point for pilgrims and commercial traffic. Drawing on a diverse range of sources from hagiographical material to calendars, martyrologies, charters and pilgrim travel guides, the book examines how sanctity functioned at this key cultural crossroads and, by integrating the analysis of sanctity with that of pilgrimage, offers important new insights into society, cross-cultural interaction and faith in the region and across the medieval world.

This landmark volume combines classic and revisionist essays to explore the historiography of Sardinia's exceptional transition from an island of the Byzantine empire to the rise of its own autonomous rulers, the iudikes, by the 1000s. This book shows how the Italian legal system developed mainly thanks to the cooperation of universities. In this way a Continental 'common law' was built which even today is useful as a common heritage.

Fin dalla metà del XIII secolo la presenza degli Ordini mendicanti diventa elemento caratterizzante della città medievale. Questo fenomeno sempre più esteso, che si consolida progressivamente nei decenni seguenti, raggiungendo l'apice nel corso del Trecento, provoca un acceso dibattito all'interno delle comunità conventuali sull'opportunità o meno di erigere complessi duraturi e monumentali nei contesti urbani. La successiva costruzione di una rilevante moltitudine di conventi nella penisola italiana incide profondamente sulle scelte artistiche e architettoniche con soluzioni innovative che verranno replicate, con opportune declinazioni locali, in un ampio contesto territoriale. La crescita della città europea tra XIII e XIV secolo risentirà profondamente della presenza dei conventi mendicanti, determinando l'espansione di alcune aree, l'incremento residenziale e demografico in altre, la trasformazione del tessuto storico prossimo ai principali poli urbani, religiosi e politici. Questo volume, esito del progetto di ricerca interdisciplinare e internazionale, La città medievale. La città dei frati | Medieval city. City of the friars, sostenuto da diversi enti e istituzioni, prospetta molteplici approcci e competenze utili a far luce sulla complessità e la ricchezza di una delle più significative esperienze religiose dell'età medievale e della prima età moderna.

La città medievale è la città dei frati? / Is the medieval town the city of the friars?

Through a close study of local demographics and topographies, this study considers patterns of piety, charity and patronage, and by extension, the development of art and architecture in Siena's southern contado during the thirteenth and fourteenth centuries. Garrisoning the Borderlands of Medieval Siena describes Sant'Angelo in Colle as a designated 'castello di frontiera' under the Sienese Government of the Nine (1287-1355), against the background of Siena's military and economic buoyancy during the early fourteenth century. At the same time, mining thoroughly the Tax Record of 1320 and the Boundary Registration of 1318 and presenting a large number of individual records that have not been published before-including wills, tenancy agreements, land exchange and sharecropping contracts-the author constructs a portrait of the people, buildings and surrounding countryside of Sant'Angelo in Colle. Finally, adopting the methodological approach of first considering patterns of ownership of land and property in the context of identifying potential patrons of art, the study considers patterns of piety and charity established in the early fourteenth-century village and the extent to which these affected the development of the urban fabric and the embellishment of key buildings in medieval Sant'Angelo in Colle.

William McCuaig explores the intellectual turbulence of the late Italian Renaissance through a full examination of the work of one scholar--the humanist Carlo Sigonio (1523-84), whose insistence on critical methods for reconstructing the past revolutionized the study of ancient Roman history and the Italian Middle Ages. An internationally published scholar caught in the political tension of the Counter-Reformation, Sigonio was harshly censored by ecclesiastical authorities in Rome, who opposed his application of critical methods to the history of the post-classical world. McCuaig traces Sigonio's interactions with his opponents and supporters, both academic and clerical, to provide a fascinating and detailed portrait of a cultural milieu. On a general level, this study of Sigonio's works helps explain how the republican ethos of the Italian Renaissance came to an end and how the modern study of ancient history evolved in Italy and France after 1550. Among many topics, this book emphasizes Sigonio's contributions to social history, and points to parallels between the changing social stratifications of ancient Rome and those of early modern Italy. Interdisciplinary in its approach, the work also touches upon the history of education, political theory, the book trade, and historiography. Originally published in 1989. Italy in the Middle Ages was unique among the countries of Europe in recreating, in a changed environment, the urban civilization of antiquity - the society, culture, and political formations of city-states. This book examines the origins and nature of this phenomenon from the fall of Rome to the eve of its consummation, the Italian Renaissance. The explanation is sought in Italy's singular 'double existence' between two contrasted worlds - ancient and medieval. The ancient was characterised by the total predominance of the landed aristocracy in economy and society, enforced through a peculiar system of city states embracing town and country. The new medieval influences were marked by the separation of town, country and aristocracy, by the identification of towns with trade and a mercantile bourgeoisie, and by commercial and proto-industrial revolution. Italy shared in both worlds. It remained a land of cities and of an urbanized ruling class (except in the Norman South) and re-established territorial city states; but the states were very different from those of antiquity, the city leaders in the commercial revolution, and Italy itself seen as a nation of shopkeepers, birthplace of capitalism. In this fascinating and ground-breaking study, Philip Jones traces in detail the tension and interaction between the two traditions, civic and patrician, mercantile and bourgeois, through all phases of Italian life to their culmination in two rival regimes of communes and despots.

The richest and most politically complex regions in Italy in the earliest middle ages were the Byzantine sections of the peninsula, thanks to their links with the most coherent early medieval state, the Byzantine empire. This comparative study of the histories of Rome, Ravenna, and Venice examines their common Byzantine past, since all three escaped incorporation into the Lombard kingdom in the late 7th and early 8th centuries. By 750, however, Rome and Ravenna's political links with the Byzantine Empire had been irrevocably severed. Thus, did these cities remain socially and culturally heirs of Byzantium? How did their political structures, social organisation, material culture, and identities change? Did they become part of the Western political and ideological framework of Italy? This study identifies and analyses the ways in which each of these cities preserved the structures of the Late Antique social and cultural world; or in which they adapted each and every element available to them to their own needs, at various times and in various ways, to create a new identity based partly on their Roman heritage and partly on their growing integration with the rest of medieval Italy. It tells a story which

encompasses the main contemporary narratives, documentary evidence, recent archaeological discoveries, and discussions on art history; it follows the markers of status and identity through titles, names, ethnic groups, liturgy and ritual, foundation myths, representations, symbols, and topographies of power to shed light on a relatively little known area of early medieval Italian history.

Daniel Waley and Trevor Dean illustrate how, from the eleventh century onwards, many dozens of Italian towns achieved independence as political entities, unhindered by any centralising power. Until the fourteenth century, when the regimes of individual ‘tyrants’ took over in most towns, these communes were the scene of a precocious, and very well-documented, experiment in republican self-government. Focusing on the typical medium-sized towns rather than the better-known cities, the authors draw on a rich variety of contemporary material (both documentary and literary) to portray the world of the communes, illustrating the patriotism and public spirit as well as the equally characteristic factional strife which was to tear them apart. Discussion of the artistic and social lives of the inhabitants shows how these towns were the seed-bed of the cultural achievements of the early Renaissance. In this fourth edition, Trevor Dean has expanded the book’s treatment of religion, women, housing, architecture and art, to take account of recent trends in the abundant historiography of these topics. A new selection of illuminating images has been included, and the bibliography brought up to date. Both students and the general reader interested in Italian history, literature and art will find this accessible book

a rewarding and fascinating read.

This book traces the intellectual life of the Kingdom of Italy, the area in which humanism began in the mid thirteenth century, a century or more before exerting its influence on the rest of Europe. Covering a period of over four and a half centuries, this study offers the first integrated analysis of Latin writings produced in the area, examining not only religious, literary, and legal texts. Ronald G. Witt characterizes the changes reflected in these Latin writings as products of the interaction of thought with economic, political, and religious tendencies in Italian society as well as with intellectual influences coming from abroad. His research ultimately traces the early emergence of humanism in northern Italy in the mid thirteenth century to the precocious development of a lay intelligentsia in the region, whose participation in the culture of Latin writing fostered the beginnings of the intellectual movement which would eventually revolutionize all of Europe.
