"This book provides guidance on how to employ enterprise architecture (EA) in deploying and managing information technology (IT) solutions from the perspectives of pragmatic strategies. There is now widespread agreement that innovation holds the key to future economic and social prosperity in developed countries. Experts studying contemporary capitalism also agree that the battle against unemployment and relocations can only be won through innovation. But what kind of innovation is required and what is the best way to manage, steer and organize it? Grounded on experiences of innovative firms and based on recent design theories, this book argues that instead of relying on traditional R&D and project management techniques, the strategic management of innovation must be based on innovative design activities. It analyses and explains new management principles and techniques that deal with these activities, including innovation fields, lineages, C-K (Concept-Knowledge) diagrams and design spaces. The book is ideal for advanced courses in innovation management in industrial design schools, business schools, engineering

schools, as well as managers looking to improve their practice.

Due to the dramatic shifts in the knowledge economy, this book provides a significant departure from traditional strategic management concepts and practice. Designed for both advanced students and business managers, it presents a unique combination of new strategic management theory, carefully selected strategic management articles by prominent scholars such as Gary Hamel, Michael Porter, Peter Senge, and real-world case studies. On top of this, the authors link powerful new benchmarks in strategic management thinking, including the concepts of Socio-Cultural Network Dynamics, Systemic Scorecards, and Customer Knowledge Management with practical business challenges and solutions of blue-chip companies with a superior performance (Lafite-Rothschild, Who's Who, Holcim, BRL Hardy, Kuoni BTI, Deutsche Bank, Unisys, Novartis).

The 4th Edition of Strategic Management of Technology and Innovation by Burgelman, Christensen, and Wheelwright continues its unmatched tradition of market leadership, by using a combination of text, readings, and cases to bring to life the latest business research on these critical business challenges. New co-author Clay Christensen provides his insights on innovation management and new market entries through several new cases. Approximately 40% of the cases are entirely new to this edition. Strategic Management of Technology and Innovation takes the perspective of the general manager at the product line, business unit, and corporate levels. The book not only examines each of these levels in some detail, but also addresses the interaction between the different levels of general management - for example, the fit between product strategy and business unit strategy, and the link between business and corporate level technology strategy. Each part of the book starts with an introductory chapter laying out an overall framework and offering a brief discussion of key tools and findings from existing literature. The remainder of each part offers a selected handful of seminar readings and case studies. Almost all of the cases deal with recent events and situations, including several that are concerned with the impact of the Internet. A few "classics" have been retained, however, because they capture a timeless issue or problem in such a definitive way that the historical date of their writing is irrelevant.
