Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

In typical "Basic Concepts" fashion, the subject is treated with maximum emphasis on demystifying basic science topics using analogy, charts and algorithms, clinical examples, mnemonics and other proven teaching methods. Organized from simple to more complicated concepts, students will enjoy the uniquely lucid review of cell biology including cell membranes, intracellular trafficking, signal conduction, mitosis and meiosis, cell motility, and more. Histology is also reviews, starting with epithelium and junctional complexes, connective tissue, muscle, and a system-by-system review of cell structure.

Contemporary Autobiography of a Science Educator reminds readers that they teach who they are, and understanding who they are is fundamental for meaningful communication and effective classroom instruction. Human Biology is a new book for readers preparing for careers in human biology or anatomy & physiology. As in Belk and Borden's highly successful "Biology: Science for Life," science is presented as a story that is integrated into the narrative to motivate readers to read further and make real-life connections to the concepts they are learning. Critical thinking is emphasized through figure captions that encourage readers to think further, "Stop and Stretch" vignettes that ask them to reflect on earlier concepts, and end-of-chapter problems that pose questions that integrate and synthesize the chapter material. The unique presentation of molecular genetics early in the book (Chapter 4) allows the authors to apply molecular ideas in subsequent chapters. Clear and friendly writing continues as a hallmark of these authors. **KEY TOPS:** The Scientific Method: Proven Effective, The Chemistry of Life: Drink to Your Health?, Cell Structure and Metabolism: Diet, Genes—Transcription, Translation, Mutation, and Cloning: Genetically Modified Foods, Tissues, Organs, and Organ Systems: Work Out, The Musculoskeletal System: Sex Differences in Athleticism, The Digestive System: Weight-Loss Surgery, The Blood: Malaria-A Deadly Bite, The Cardiovascular System: Can We Stop the Number-One Killer?, The Respiratory System: Secondhand Smoke, The Urinary System: Surviving the Ironman, Immune System, Bacteria, Viruses, and Other Pathogens: Will Mad-Cow Disease Become an Epidemic?, Sexually Transmitted Infections: The Cervical Cancer Vaccine, Brain Structure and Function: Attention Deficit Disorder, The Senses: Is Danger Near?, The Endocrine System: Worried Sick, DNA Synthesis, Mitosis, and Meiosis: Cancer, Human Reproduction: Is There Something in the Water?, Mendelian and Quantitative Genetics: Are You Only as Smart as Your Genes?, Extensions of Mendelism, Sex Linkage, Pedigree Analysis, and DNA Fingerprinting DNA Detective, Development and Aging : The Promise and Perils of Stem Cells, Evolution: Where Did We Come From?, Ecosystems and Biomes: Where Do You Live?, Population, Community, and Ecosystem Ecology: Is Earth Experiencing a Biodiversity Crisis?
