This study guide will be a reliable support and easy-to-use source of information for students in the fields of dosimetry, physics, radiation oncology, and therapy as they progress through the educational levels in preparation for board examinations. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level I questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student, while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or those taking equivalent exams elsewhere in the world. The study guide is

broken down into different subject areas, with provision of multiple questions and answers on each subject. In addition, the mathematical and physics questions include brief explanations of how the student can solve each problem. At the end of the guide, three practice tests are included with the same number of questions as are found in the MDCB exam. These tests will help students to test their knowledge and improve their test-taking speed.

A study guide is an invaluable tool for any student, but this is particularly true of advanced anatomy classes. Anatomy classes require the memorization of potentially hundreds of terms, definitions and body parts for a single test, which can be quite a difficult task. The use of a study guide enables a student to compile all needed information into a single, easily read paper. Also, the act of writing down information has been shown to aid

in memorization. While it is certainly possible to study for a test without a written study guide on hand, the use of a study guide will help a student focus and make connections that they might otherwise miss.

PREFACE The Commander, United States Special Operations Command (USSOCOM) directed that all Special Operational Forces (SOF) Medics be trained to a single, interoperable standard. He directed that the USSOCOM's Advanced Tactical Practitioner's (ATP) Critical Task List (CTL) be implemented into all SOF enlisted medical training as a minimum standard. Upon completion of SOF medical training, all SOF students are required to sit and successfully pass the USSOCOM Advanced Tactical Practitioner's Certification Examination as official recognition and proof of the student's knowledge of the CTL medical requirements. This study guide reflects the hybrid nature of the USSOCOM certification examination. Where applicable, SOF medical requirements and standards have been merged with the DOT based curriculum. The DOT/Civilian standards of care are always applicable to the military but there may be times when it is difficult to achieve. Many questions on the examination will be

appropriate in either setting. Where so, there has been an attempt both on the examination and in this study guide, to differentiate the standard of care in the pertinent setting. The ATP student will find that like the Department of Transportation's Curriculum and the National Registry's Certification program and any other "Medical Certification" process; most of the material covered within the pages of this study guide will be covered during the student's formal phase of instruction. However, some of it may not. The student must recognize that not all subject material can be taught in a formal setting. It is the ATP student's responsibility to use this study guide to complement their formal instruction in preparation to successfully pass the USSOCOM ATP Certification Examination.
