nursing programs An interdisciplinary exploration of pharmacology. By its very nature, pharmacology is a challenging interdisciplinary subject that requires understanding concepts from a wide variety of the natural and applied sciences to predict drug action. For this reason, authors Holland, Adams, and Brice have organized Core Concepts in Pharmacology according to body systems and diseases, placing drugs in the context of their therapeutic use. This gives students easier access to the prerequisite anatomy, physiology, pathophysiology, and pharmacology organized in the same chapter where the drugs are discussed. The Fifth Edition continues its prototype approach of introducing, in detail, the one or two most representative drugs in each class. It also maintains a strong emphasis on safe, effective nursing care with a new chapter on preventing medication errors, features new Drug Focus boxes to cover emerging drugs, and includes many more new and updated features.

When we published Land of Hope in May of 2019, we had an immediate response from teachers and students that (1) they loved the book, and (2) they would need ancillary materials to aid them in the use of the book for classroom instruction. We jumped right on that, and produced a Teacher's Guide, which appeared in spring of 2020, and we're now following up with a Student Workbook, which is completely coordinated with the Teacher's Guide, featuring study questions (which can also be used for testing by teachers), objective exercises (matching, identification, temporal ordering), primary-source documents and accompanying study questions, a section of map exercises which include in-text outline maps for student use, as well as back-of-the-book resources such as reference tables for the British monarchy, the American presidency, and a list of suggestive questions that are suitable for extended essays or term papers. It is the perfect resource for both classroom teaching, home education, and hybrid versions of both.
