

## Study Skills For High School Students

This new guide builds on the hugely successful materials the authors have developed over the last 15 years. Along with highly practical guidance on traditional learning skills, The Guide to Learning and Study Skills provides guidance for students on learning in a blended environment; the increased use of personal and professional development planning, continuing professional development and work-based learning.

Study Skills for Success presents basic study strategies and academic skills that students need to excel in their last years of high school or in college. This textbook was written for students whose schoolwork has not given them enough practice in applying these basic study skills so they can perform well in academic settings. Major topics covered in the book include: \* Organizing Information (alphabetizing, outlining, reading timelines, taking notes) \* Reading and Interpreting Illustrated Information (maps, graphs, charts, tables) \* Skills for Better Reading (skimming and scanning, vocabulary strategies, determining the main idea) \* Research Strategies (avoiding plagiarism, using the Internet) A list of the many skills taught is provided in the front of the book. Study Skills for Success emphasizes skill building through practice, as the lessons on each topic contain a plethora of tips and several exercises. A review lesson caps the end of each section of the textbook, and the final lesson of the book reviews the major skills taught. Appendixes include various abbreviations and conversion tables.

**STUDY LESS. UNDERSTAND MORE.** Do you have a high school student who struggles to study well? The Study Skills Guide - Study Tips & Strategies for Test Preparation for High School Students is filled with study tips and test preparation strategies for high school students. Using the guide, students learn how to: Clear the brain fog with step-by-step tips for studying a topic from start to finish. Includes CD-Rom There are many 'Do-it-Yourself' manuals for students and young people experiencing study skills problems. However, if this group of young people could study these books then they would already have the skills necessary! In order to use a self help manual the student needs internal motivation, the ability to self-instruct from text and the ability to put the learned strategy into place... but these are the same attributes that these students find difficult. In this book, Pat Guy provides a series of lesson plans making up a taught study skills course for secondary schools, sixth forms, FE colleges and Pupil Referral Units. She shows the reader how to teach, through self assessment, practice and confidence-building techniques, the techniques and self management required to achieve independent study skills. All the activities and worksheets, including revision and exam tips for the students, are easily printable from the accompanying CD-rom. The sessions can be delivered by teachers, tutors, Learning Mentors, or anyone whose aim is to improve attendance and achievement in older students. Pat Guy has taught for over twenty years in LEA and secondary schools in Outer London, Northamptonshire, Birmingham and Bedfordshire as a class teacher, subject teacher, SEN support, SENCO and advisory teacher. Provides high school students tips on ways to achieve academic success with information on learning styles, goal setting, note taking, preparing for tests, and developing critical thinking skills.

Provides opportunities for active learning and student practice in the study skills and strategies most important for success in high school.

#### **Level III (Grades 11-13) The hm Learning and Study Skills**

Program: Level III was designed to provide an introduction to learning and study skills for high school juniors and seniors and beginning college students through a series of activity-oriented units. It is structured on the assumption that an activity-oriented lesson is the most effective instructional strategy for the teaching of study skills: more succinctly, that "learning by doing" is the best way "study smart." Learning and study skills are important for learning. They are methods and ways of doing things that help make learning easier.

Understanding how to study can also facilitate learning by assisting students as they complete assignments correctly and efficiently during a specified period of time. Just like any other skill, knowing how to learn and study proficiently must be learned and practiced over time. The Program has been designed to help students learn more efficiently and effectively.

Miriam, a freshman Calculus student at Louisiana State

University, made 37.5% on her first exam but 83% and 93% on the next two. Matt, a first year General Chemistry student at the University of Utah, scored 65% and 55% on his first two exams and 95% on his third—These are representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple, straightforward strategies to use, they can significantly increase their learning and performance. For over a decade Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years, ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning; finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively, and that readers can be flexible in picking and choosing among the strategies she presents, Sandra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with

no background in education or cognitive psychology, the book avoids jargon and esoteric theory.
