The CPSM qualification enables professionals to gain a clear understanding of their organization's supply operation and enable managers to take an active role in critical decisions. The theme of this new edition of Cross-Cultural Business Behavior is CHANGE. First of all, cultures change. In markets around the world, business behavior is constantly evolving, impelled by generational shifts, improvements in education, and (especially) increasing exposure to the world marketplace. That is why all of the book's 43 'Negotiator Profiles' have been thoroughly updated, with new cases and fresh examples added. In addition to the change in culture, international managers' challenges have changed too. For example, just a few years ago, participants at global management seminars around the world were mainly interested in how to communicate and negotiate with overseas partners. But, they now find that their toughest challenges are how to manage overseas subsidiaries, strategic alliances, and international partnerships. To reflect these new realities, the book's time-tested framework for understanding cross-cultural negotiating behavior has been expanded to include a wide variety of practical pointers on managing in today's global marketplace. This fifth edition is important for everyone involved with global management, whether student or manager, because cultures and business challenges do change. The book is an essential survival

SMR was the final module to take in the past. Now it becomes module 1 of the new part 2 exam. Is it tough? Well, in a sense, yes. It is tough because there is no fixed answer to the test questions. You are asked to choose the best possible answer among all potentially OK answers. Also, most questions are long and with complicated scenarios to confuse you. To pick up the "politically correct" answers you have to use your business sense to make judgment on a case by case basis. SMR is all about supply-side management at a higher global and strategic level. What is serious supply management all about? Accenture has developed seven principles of supply-chain management: 1. Segment customers based on their service needs. 2. Design the logistics network based on service requirements. 3. Listen to the signals of market demand and plan accordingly. 4. Differentiate products based on actual consumer demand. 5. Strategically manage the sources

of supply. 6. Develop a supply-chain-wide technology strategy. 7. Adopt measures that apply to every link in the supply chain. Because of advances in manufacturing and distribution, the cost of developing new products and services is dropping, and time to market is speeding up. This has resulted in increasing customer demands, local and global competition, and increased pressure on the supply chain. To stay competitive, companies must reinvent themselves so that the supply chain-sourcing and procurement, production scheduling, order fulfillment, inventory management, and customer care-is no longer a cost-based back-office exercise, but rather a flexible operation designed to effectively address today's challenges. If you have been specializing in manufacturing or shop floor functions, it is now the time to move yourself to a managerial position - you need to see things from a broader MBA style perspective.

The modules are: Module 1 - Supply Chain Design Module 2 - Supply Chain Planning and Execution Module 3 - Supply Chain Improvements and Best Practices

There are overlapping knowledge, and it is suggested that you study these modules together. In reality, the CSCP exam and the CPIM BSCM exam share a lot of common topics on SCM.
