In times of declining economic growth, companies have to control their costs more than ever to save resources needed in the future. Regardless of the economic size of the company, the processes of production and logistics play a

decisive role in stabilizing procedures and avoiding waste.

Both are important cost drivers in manufacturing companies and therefore they offer large potential savings. Pervasive networking in the last years has

to be found in missed goals. It is not unusual that important cost factors were disregarded in the original basis of decision-making. In the meantime many companies have realized that it is easier to achieve stability of processes and
