I would like to enter a partnership with you, sharing what these assigned passages say to me, setting forth what I might do with each assigned text, hopefully igniting ideas in your busy and at times overburdened mind and spirit, so that together we may bring that word from the Lord. ... My hope is not to take the work entirely out of sermon preparation, but to generate a process whereby the busy -- sometimes overworked -- preacher can get off to a running start.

In *Wetlands and Western Cultures: Denigration to Conservation*, Rod Giblett examines the portrayal of wetlands in Western culture and argues for their conservation. Giblett's analysis of the wetland motif in literature and the arts, including in *Beowulf* and the writings of Tolkien and Thoreau, demonstrates two approaches to wetlands—their denigration as dead waters or their commendation as living waters with a potent cultural history.

The Arab economy witnessed in the last three decades some developments as expressed by GDP per capita as well as by the human development index. However, such developments are not enough. It's varied, not comprehensive, and not as hoped. It's varied not only between individual states, but also within sectors of economy as well as within segments of the society including women and children. This conclusion is valid to the Arab economy in general as well as to the Arab financial markets and institutions. Accordingly, this book aims to delve into the theme of the financial sector including financial markets and institutions within the context of the Arab economy.

The papers in this collection present the numeral systems of more than twenty Nigerian languages. The papers mainly emanate from a workshop on the numeral systems of Nigerian languages organised by the Linguistic Association of Nigeria during its 23rd Annual Conference which was held at the University of Port Harcourt, Nigeria. The workshop arose from awareness created by Dr. Eugene S.L. Chan on the need for Nigerian linguists to document this severely endangered but very important aspect of natural languages. The quantum of mathematical computations - addition, multiplication, subtraction, or a combination of two or all of these - involved in the numeral systems of Nigerian languages is remarkable. The papers reveal that a variety of numeral systems do exist, such as: binary, decimal, incomplete decimal, duodecimal, quinary, quaternary, ternary, mixed, body-part tally systems, and much more. The book is a resource about how different languages manipulate their numeral systems.
