Constructing the Infrastructure for the Knowledge Economy

The Engineering Design of Systems

In recent years the construction industry has been criticised for lack of successful innovation compared to other major industries. The question of why the industry

Read Free System Requirements Document

Brandon Miller

has not been seen to be innovative has created concern among many involved with construction and property. The driving concern is where the motivation for this innovation should come from. Although construction clients have made an impact in this area, the industry itself seems divided as to whether, when and where clients should drive the innovation process. Clients Driving Innovation brings together an international group of researchers and practitioners to investigate the role of clients in construction innovation. Written in three parts, it covers the context for innovation driven by clients, the client impact on the innovation process and how new ideas can be pushed through into practice.

Brandon Miller

Numerous case studies illustrate the role clients can play and the key issues that need to be addressed. With increasing interest in the contribution clients can make to construction innovation, *Clients Driving Innovation* will be essential reading for construction management researchers, major construction contractors and clients and government policy makers.

The idea of *The Fingerprint Sourcebook* originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a

Read Free System Requirements Document

Brandon Miller

joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community. In an exhaustive compilation of current knowledge, *Wastewater Treatment* covers subjects that run the gamut from wastewater sources, characteristics, and monitoring to chemical treatments and nutrient removal. Thoroughly examining basic and advanced topics, this

Brandon Miller

resource has it all. The wealth of easy-to-use tables and illustrations provides quick and clear references, making it indispensable. Schematic drawings of equipment and devices explain the technology and techniques. With the level of detail included, you can count on finding both introductory material and very technical answers to complex questions. It's seamless style clearly delineates what can and must be done to continue to improve the quality of our water. Wastewater Treatment is a valuable resource; appropriate for engineers and students but readable enough for anyone interested in the discipline. Béla G. Lipták speaks on Post-Oil Energy Technology on the AT&T Tech Channel.
