

## T Le Wing User Guide

It's 2048, eleven years after America's second revolution. Timothy Delgreco is hopelessly imprisoned in an appalling federal jail. While incarcerated he encounters a wise old man with startling information. "The end began at the beginning with an institution," the sage tells him. "Slavery started a chain of events that caused America to go full circle. Slavery for one group of people produced slavery for all people." Delgreco's world is turned upside down by what he hears. He learns commonly held perceptions are mostly wrong, many things he'd been taught aren't true, and the prison he lives in goes far beyond the penitentiary walls. Along the way, he discovers mankind's only hope. Join Timothy and the wise old sage as they examine US history from a whole new perspective. Learn how the world's freest nation lost its freedoms, and how it was slave initiated the process. Chains of Slavery is a work of fiction, but its warning is all too real. In its United States' past is revealed, and its future foretold. The chain needs to be broken; if it isn't, the experiment which began in 1776 will end in tyranny not many days from now.

**Division II: Aerodynamics, Volume 7: Wing Theory in Supersonic Flow** examines the cases of isolated simple wings, wings with vertical plane tail, cruciform wings, and simple or cruciform wings fitted with a body. This book presents the method for the actual calculation of isolated wings or of more complex system. Organized into 12 chapters, this volume starts with an overview of the basic equations in the mechanics of inviscid fluids. This text then presents a unified theory that is established for angularly shaped wings in supersonic flow. Other chapters consider the method for calculating the characteristics of drag, lift, and moments for various shapes of the trailing edge line. This book discusses as well the wings of ordinary shapes, delta wings, yawed wings, polygonal wings, trapezoid wings, and arrow-head or swept-back wings. The final chapter deals with a delta wing with a central fusiform body. This book is a valuable resource for teachers, students, and specialists engaged in modern aerodynamics.

The aerodynamic design of propellers from considerations of centrifugal force is presented. A solution is obtained for the span wise distribution of cross-sectional area required to attain constant centrifugal stress over most of the blade.

In this extraordinary journey, Alan Tennant recounts his attempt to track the transcontinental migration of the majestic peregrine falcon — an investigation no one before him had ever taken to such lengths. From the windswept flats of the Texas barrier islands to the Arctic and then south again into the Caribbean, *On the Wing* provides a hilariously picaresque and bumpy flight.
