radon in homes, electromagnetic fields, and lead. Design and analysis issues, risk assessment and meta-analysis, and future directions in environmental epidemiology are also discussed. All chapters provide a review of

the relevant literature as well as an overview of important methodologic issues, particularly exposure assessment and statistical methods. Most of these exposures are widespread and low-level, and are thought to increase

the risk of chronic diseases that have many causes. Even though the disease risks due to these exposures may be low, the public health burden may be significant because large numbers of people are exposed. Such exposures are

inherently difficult to detect via observational epidemiology. This book clarifies the problems and suggests ways to move forward. It will be useful to students and practitioners of public health, environmental health, and

The Nutritional Psychology of Childhood is a systematic account of research on the psychological aspects of nutrition in children from birth to adolescence. It deals with two major themes: the

development of eating and the effects of malnutrition on the developing child. Robert Drewett discusses the developmental problems that arise with eating and food intake, including nursing and weaning in infancy, the

more generally malnourished, and in children with physical illnesses, including phenylketonuria and cerebral palsy. The development of eating disorders and obesity are also considered. Drawing on research from both developing

and industrialised countries, this book will be of interest to students, researchers and professionals in psychology, nutrition and child health.

The first International Congress on Science and Skiing was held in

Austria in January 1996. The main aim of the conference was to bring together original key research in this area and provide an essential update for those in the field. The link between theory and practice was also addressed, making the

research more applicable for both researchers and coaches. This book is divided into five parts, each containing a group of papers that are related by theme or disciplinary approach. They are as follows: Biomechanics of Skiing;

The technology of polymer science has developed considerably during the past half-century, and this volume describes some of the aspects of this technology that will have a great impact in the future. Among these advances, for

example, are gene delivery to specific disease sites and carrier polymers that respond to a stimulus or particular environment. Cancer targeted drug delivery is another focused area of this volume because of the
