This book is a philosophical analysis of ordinary concepts like human action and consciousness, and how they get

represented in our language. It examines the philosophical history of the issues that emerge and places the discussion across different paradigms. It brings into contemporary focus some problems like intentionality, relation between mind and body, and the structure of explanations. Examining fundamental concepts of

thought, this book explores a range of approaches related to human consciousness. Realist paradigms of consciousness as expressed through linguistic and phenomenological structures are also discussed along with their epistemological and semantic implications. Though some of the

discussions are contextualized within certain philosophical traditions, we can fruitfully reframe some of the problematics within alternative philosophical traditions for deeper insights into some of the tricky problems of philosophy. For instance, the vocabulary of action within the Indian philosophical

framework offers an alternative perspective that treats action itself as a fundamental category that has causal as well as moral implications. This book will be useful for anyone interested in pursuing concepts philosophically and chart its implications for various areas of knowledge.

Today most scientists and
philosophers have come to regard

the notion of the self as a kind of illusion, as a theoretical construct similar to the notion we have of the center of gravity. There are two reasons for this phenomenon: the first is due to the view propagated by the empirical sciences that all

things in the universe, including the presence of consciousness, can be explained solely from physical causes; and the second is due to the philosophical arguments marshaled against substance ontology by David Hume and

Emmanuel Kant and the consequent discarding of the idea of self as substance. This book confronts both these views – in two separate parts of the book - and shows them to be untenable. It provides a fresh proof of the self's

existence by demonstrating that the goal-oriented actions of living beings cannot be explained solely through the laws of physics and that these actions point to a unique power possessed by the self, known in Indian philosophy as kriya-shakti.

This original work focuses on the rational principles of Indian philosophical theory, rather than the mysticism more usually associated with it. Ganeri explores the philosophical projects of a number

The work includes the Tattva Kaumudi of Sri Vacaspati Misra.
