**The ultimate in recycling, composting has been in use in some form since ancient times. A well-managed composting facility should exist as a good neighbor contributing to ecology. However, since local populations often perceive risks if a composting facility is built nearby, composting facilities must be designed and operated with minimal odor, dus**

**Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:**

- physical principles of various material handling systems;
- considerations in selecting technically efficient and environmentally friendly equipment;
- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

This book showcases cutting-edge research papers from the 7th International Conference on Research into Design (ICoRD 2019) - the largest in India in this area - written by eminent researchers from across the world on design processes, technologies, methods and tools, and their impact on innovation, for supporting design for a connected world. The theme of ICoRD'19 has been "Design for a Connected World". While Design traditionally focused on developing products that worked on their own, an emerging trend is to have products with a smart layer that makes them context aware and responsive, individually and collectively, through collaboration with other physical and digital objects with which these are connected. The papers in this volume explore these themes, and their key focus is connectivity: how do products and their development change in a connected world? The volume will be of interest to researchers, professionals and entrepreneurs working in the areas on industrial design, manufacturing, consumer goods, and industrial management who are interested in the use of emerging technologies such as IOT, IIOT, Digital Twins, I4.0 etc. as well as new and emerging methods and tools to design new products, systems and services.

**This collection brings together global perspectives which critically examine the ways in which language as a resource is used and managed in myriad ways in various blue-collar workplace settings in today's globalized economy. In focusing on blue-collar work environments, the book sheds further light on the informal processes through which top down language policies take place in different multilingual settings and the resultant asymmetrical power relations which emerge among employees and employers in such settings. Taking into account the latest debates on poststructuralist theories of language, the volume also extends its conceptualization of language to demonstrate the ways in which it extends to a wider range of multilingual and multimodal resources and communicative practices, all of which combine in unique and different ways toward constructing meaning in the workplace. The volume's unique focus on such workplaces also showcases domains of work which have generally until now been less visible within existing research on language in the workplace and the subsequent methodological challenges that arise from studying them. Integrating a range of theoretical and methodological approaches, along with empirical data from a diverse range of blue-collar workplaces, this book will be of particular interest to students and researchers in critical sociolinguistics, applied linguistics, sociology, and linguistic anthropology.**
