From the author of *Submergence* comes a digital-original triptych of essays that examine humanity in the modern age. *Terra Firma Triptych* begins in a wilderness in South Sudan. J. M. Ledgard is there in search of a still point, untouched by humankind--a goal complicated by the contingent of armed rangers accompanying him. Next, a trip through Rwanda--taking a borrowed car toward crocodile-infested lakes near the border with Burundi--a road trip that unexpectedly ends up at the site of the country's proposed future in the sky. And finally Ledgard takes us straight into a vision of that very future, of a continent poised to take advantage of current and near-future technological advances--a vision that feels *Star Trek* fanciful at first, then not just practical but necessary. As a novelist, Ledgard is celebrated for his ability to allow his imagination and ideas to fly wide and free even as he grounds his stories in contemporary political reality, earning simultaneous comparisons to both W. G. Sebald and John le Carré. As a journalist, he has covered East Africa for *The Economist* for more than a decade. In *Terra Firma Triptych*, Ledgard is able to summon the searching, soaring, poetic voice of the novelist and to latch it to the gritty vision of the reporter on the ground to show us a world in which connectivity has become paramount, in which isolation and uncharted landscapes verge on obsolete, and yet new frontiers still beckon. Each panel of the triptych informs the one before--each goads us forward even as it questions the acceleration. What is certain is that we are hurtling into tomorrow together, and our potential depends on the generosity of our imagination.

TERRA FIRMA is set in a not-so-distant Beckettian future--years after a conflict known as the Big War, in which a tiny kingdom wrestles with the problems of running a nation--and opposing notions of what makes a citizen, a country, and a civilization.

In *Mysteries of Terra Firma*, James Lawrence Powell tells an engrossing three-part tale of how we came to understand the ground on which we walk, and how that ground holds the key to the greatest secrets of deep space and time. Naming his profound stories Time, Drift, and Chance, he tells of the three twentieth-century revolutions in thought that created the amazing science of Earth -- and of all planets to the edge of the universe. The riddle that drove the first revolution is obvious and yet in 1904 remained impenetrable: how old is Earth? An encounter between the imperious Lord Kelvin and a New Zealand farm-boy-turned-physicist, Ernest Rutherford, set the stage for the solution and launched a golden century of geology. As a result, scientists learned that if the 4.5 billion years of geologic time were compressed into a single twenty-four-hour period, *Homo sapiens* would have arrived only in the last second. The geological Revolution of Time reveals how long the ground on which we walk has existed, and how briefly we have trod that ground. In the early twentieth century, German meteorologist and polar explorer Alfred Wegener proposed a counterintuitive, heretical theory: that terra firma is not so firm; instead of being fixed in place, continents drift. In 1926, petroleum geologists convened in New York City to discuss Wegener's radical idea, where it was met with outrage and skepticism: "If we are to believe Wegener's hypothesis we must forget everything which has been learned in the last seventy years and start all over again," one attendee said. Forty years later, a new generation did exactly that. The Revolution of Drift, the second part of Powell's narrative, showed us how the ground on which we walk moves. Throughout geologic time, meteorites have incessantly bombarded everything in the solar system. Far from serene and predictable, the planets are ruled by random violence on an unimaginable scale. Once a mountain-sized meteorite flew through space, struck the Earth, killed the dinosaurs and two-thirds of all species, and spared the small hamster-sized creature that happened to be our ancestor. The chance of that happening again is essentially zero. So, the final revolution in Powell's history of a golden century of geology is the Revolution of Chance. Simply put, this revolution in thought has transformed our understanding of how lucky we really are. If we can learn so much from considering no more than the rocks beneath our feet, what will we learn when we begin walking on other planets? *Mysteries of Terra Firma* is both charming in its storytelling and staggering in its implications. Discovering the ground on which we stand is a fascinating journey into our past -- and our future.

Every 2549 days a ritualistic murder takes place within the city limits of San Francisco. The 7-year cycle has gone on since the 1920s without exception and is performed with exacting precision. No part of the rite has ever been missed or an error found and all we can do is take pictures, write reports, and clean up the mess. Each crime scene is exactly the same, except for the victim. The killer, or killers as I think, select the victim using a specific methodology that is intended to balance out the forces of good, evil, and neutrality. In some way, the death of a single individual puts the world back in equilibrium. The ritual is confounding and we have no clues as to where the murder will take place, except that it will be within the city limits. Each time we find the desecrated body covered in numbers and shapes. The walls within the location the body is found are covered by prime numbers and there is always a note left next to the victim. "Terra Firma - The earth is once more solid. Good, evil, neutrality, all must be in balance. Chaos has been fended off once more through sacrifice." There are very few that even know that this serial murderer exists. For this case, the fourteenth that we know of, only myself, Theo my new partner, our boss, and one very complex individual. Our subject matter expert, the complex individual, suffers from Dr. Jekyll and Mr. Hyde Syndrome and we have always referred to him in that way. The media has been kept out of this for nearly a century. It is time to make this public and that is why I am contacting you. Please meet Theo and me so that we can tell you the entire story of the Terra Firma Murders. This creative thesis features a preliminary framework for a fantasy novel in the making, illustrating the project's evolution through the author's daily musings and documenting the author's progression from fine art to creative writing. It is primarily focused on the story's main characters and the many months it took to develop them.

A critical and interdisciplinary exploration of our world's continuously urbanizing and expanding coastline. For centuries, cities have grown and expanded onto previously saturated grounds; "reclaiming" land from estuaries, marshes, mangroves, and seabeds. While these artificial coastlines are sites of tremendous real estate, civic, and infrastructural investments, they are also the most vulnerable to the effects of climate change. Terra-Sorta-Firma documents the global extent of reclaimed coastal lands, and provides a framework for comparison across varying

geographies, cultures, and histories. It renders visible the ubiquity and precarity of urban coastal reclamation in an age of increased environmental and economic indeterminacy. It challenges designers, developers, policymakers, engineers, and urbanists to reconsider the design and construction of land itself, and to re-imagine this most fundamental of all infrastructures along a gradient of inundation.

Excerpt from Terra Firma, the Earth Not a Planet: Proved From Scripture, Reason and Fact I am now an old man, and, had I consulted my own comfort, would never have penned a line of this book, as for some years I have had cataract in both eyes, so that it was not without difficulty that I could read or write. So great, however, appeared to be the need, and being still anxious to serve my generation, I determined to undertake this work, in order to expose the fallacies of Modern Astronomy, which are so contrary to the Word of God, and so conducive to the promotion of Infidelity. I do not enter the lists arrayed in the panoply of Neo Science, to fight this great Goliath, but only with a few pebbles of the brook, yet I trust that, with God's blessing, the attempt may not be altogether fruitless. An inside account of the multi-billion pound world of private equity and a masterclass on the art of deal-making. The Dealmaker is a frank and honest account of how a severely dyslexic child who struggled at school went on to graduate from Oxford and become a serial entrepreneur. It describes Guy Hand's career in private equity, first at Nomura and then as head of his own company, Terra Firma. It looks in detail at the huge deals that Terra Firma has done over the years, involving everything from cinema chains and pubs to waste management, aircraft leasing and green energy. And it offers a brutally honest appraisal of the deal that almost bankrupted him - the acquisition of multinational music recording and publishing company EMI in 2007, just as a global financial crash loomed on the horizon. Above all, he gives the reader a real sense of what it's like inside the secretive world of private equity, describing in frank detail the pressures and rewards involved. Insightful and page-turning, The Dealmaker will prove inspirational and essential reading for all those who want to understand how huge business negotiations are done, and what makes one of private equity's biggest players tick.

Terra Firma: The Earth is Not A Planet, Proved From Scripture, Reason and Fact was Written by David Wardlaw Scott in 1901. A Flat Earth Theorist, He Worked To Educate Others About Why He Believed the Earth Was Flat Instead Of A Planet. In This Book, Scott Uses the Bible to Prove His Case for a Flat Earth. Although Written at the Turn of the Century, this Flat Earth Book is Very Relevant for Today. This 2018 Edition Is Updated With A Brief History of the Flat Earth Theory, and Facebook and Website Resources.

Charting the exploration of an unknown world—our own—with a new cartography of living things rather than space available for conquest or colonization. This book charts the exploration of an unknown world: our own. Just as Renaissance travelers set out to map the terra incognita of the New World, the mapmakers of Terra Firma have set out to rediscover the world that we think we know. They do this with a new kind of cartography that maps living things rather than space emptied of life and available to be conquered or colonized. The maps in Terra Firma lead us inward, not off into the distance, moving from the horizon line of conventional cartography to the thickness of the ground, from the global to the local. Each map in Terra Firma is based on a specific territory or territories, and each tool, or model, creates a new focal point through which the territory is redrawn. The maps are “living maps,” always under construction, spaces where stories and situations unfold. They may map the Earth’s underside rather than its surface, suggest turning the layers of the Earth inside out, link the biological physiology of living inhabitants and the physiology of the land, or trace a journey oriented not by the Euclidean space of GPS but by points of life. These speculative visualizations can constitute the foundation for a new kind of atlas.

Walking in the footsteps of giants, Daniel Hayward, is brought back into a conflict that threatens the whole of the Charted Systems, one that he had long since abandoned. When a simple job on the barren mining colony of Jotunhiem quickly becomes complicated, Daniel and the

crew of the Mazu are forced to deliver the goods to Neo-Shanxi, once the home of The Family. The origins of the war between the Loyalists and Separatists, that would consume the Chartered Systems, begins with a single man Dr Charles Jung, an optimistic scientific genius who made terraforming and colonisation possible. Old prejudices and paranoia cause a rift between the CERE and the Chinese colony of Delta Nine, leading the head of the Neo-Shanxi Assembly, Chairman Zhang, to seek independence from the CERE and to ensure the future of his people is left in the hands of his grandchildren, Alistair, Oscar and Wesley Jung. POST-TERRA FIMRA is a brutally savage and serenely beautiful depiction of a future not so unrecognisable from present day. With humanity in the early stages of colonising distant planets, the series explores the lives and relationships of those affected by the conflicts of political interest and the desolation of war. THE FAMILY: POST-TERRA FIRMA is a collection of books 1-5 in the POST-TERRA FIRMA series.

Though fictional, Terra Firma Angelicus is based on historical documentation, and attempts to reveal the activities of the spiritual beings in the invisible realm, who influence the affairs of mankind. The names I have chosen for these invisible characters are allegorical, derived from the Latin, Greek or Hebrew language a name that best depicts their expertise. You will meet two 21st century families in their personal struggles, who are also caught up in espionage, nation takeover schemes, and media propaganda attempting to implement a New World Order that will enslave all the toadies of the world, while systematically and strategically removing any semblance of the name of Jesus Christ and His Bible from the public consciousness. These global rulers know that Jesus Christ is the only enemy that must be defeated, before they can obtain total control of the mind of every human being. Graphically portrayed, you will see the daily involvement of the angelic and demonic entities of the invisible realm in the lives of all human beings on planet earth. Hopefully, this story will not simply acquaint you, but also educate you regarding the real power source of our everyday earthly life. Are you really in control of your own life or is someone else?

This unusual early work on 'Flat Earth Theory' was originally published in 1901. It comprises a comprehensive series of essays which use scripture, reason and fact to (attempt to) prove that the earth is not a planet. The text makes for an entertaining and informative read, providing a wonderful insight into the philosophy of a bygone age. Its chapters include discussions of: The Adamic Creation, The Nebular Hypothesis: Examination of three Alleged Proofs of the World's Globality, The Horizontality of Land and Water Proved, The Sun, according to the Scriptures, The Deluge-Biblical Account, The Great Deep a Proof that the Earth is not a Planet... and much, much more! Many old works such as this are increasingly hard-to-come-by and expensive, and it is with this in mind that this book is being republished now in an affordable, modern edition complete with a specially commissioned new introduction on the subject.

Description Derix Rall is an amnesiac who finds himself held with a group of fellow amnesiacs in a mysterious facility on a small moon at the edge of the galaxy. His escape and subsequent adventures along with the shifting kaleidoscope of perspectives he is subject to, lead him to doubt everything, including himself and the very ground of his reality. The ultimate nature of reality is a question that has puzzled philosophers for two and a half thousand years. It's an area that Philip K Dick and many other sci-fi authors have explored to great effect. It's also an area in which, I think, the best stories are set - do you remember The Prisoner series back in the sixties? Come with our hero on a journey that will expand your mind and have you questioning everything, even your own undeniable self. About the Author A breakdown at the age of twenty one while working for the GPO - no connection - has sent him into a spin that he has never truly recovered from. In the process of putting his ramshackle personality back together - with the aid of self-help books and the most outlandish bunch of beliefs this side of the andromeda galaxy, and counting - he has generated this book. The truth is no longer out there. It's snuck up behind you and is biting you on the ass. Are you ready to turn around and face it?

Neo-Shanxi has been under CERE occupation for the past year, rumours of heinous and criminal atrocities have emerged from the colony, orchestrated by S.E.L. who endeavour to maintain a tenuous notion of peace across the Chartered Systems by any means. Having regathered their strength on Maia, the Three Sons, Alistair, Oscar and Wesley Jung, are now prepared to liberate their home planet. The tragic outbreak of the war between the Loyalists and Separatists is the root of the brothers' emerging divisions, each venturing on their own paths of grief, vengeance and repudiation. As the conflict escalates, Alistair resorts to increasingly extreme ultimatums, while Wesley wrestles with the ideals and contradictions of the group that brought them so much suffering and pain. POST-TERRA FIMRA is a brutal and serenely beautiful depiction of a future not so unrecognisable from present day. With humanity in the early stages of colonising distant planets, the series explores the lives and relationships of those affected by the conflicts of political interest and the desolation of war. THREE SONS: POST-TERRA FIRMA is a collection of books 6-10 in the POST-TERRA FIRMA series.

The president of the United States and his chief of staff appear to undergo subtle changes in their normal traits and habits. A white house speech writer is surprised by his double in a Manhattan store and O'Malley suspects that a conspiracy to subjugate the country's political and military leadership through the introduction of high profile lookalikes is in progress. At first it is believed that a group of clones from a foreign country is responsible but the truth when finally revealed, shakes everyone to the core. O'Malley stumbles across Operation Terra Firma and finds himself in a fantastical world he once thought to be a figment of quantum theory. The FBI special agent finds himself in a life and death struggle against insurmountable odds to prevent a takeover of the world's most powerful military and the imposition of a new world order.
