behavior in general or specifically in transportation - whether from the point of view of the design of transit systems, urban and transport economics, public policy, operations research, or systems management and planning. The methods of discrete choice analysis and their applications in the modelling of transportation systems constitute a comparatively new field that has largely evolved over the past 15 years. Since its inception, however, the field has developed rapidly, and this is the first text and reference work to cover the material systematically, bringing together the scattered and often inaccessible results for graduate students and professionals. Discrete Choice Analysis presents these results in such a way that they are fully accessible to the range of students and professionals who are involved in modelling demand and consumer behavior in general or specifically in transportation - whether from the point of view of the design of transit systems, urban and transport economics, public policy, operations research, or systems management and planning. The introductory chapter presents the background of discrete choice analysis and context of transportation demand forecasting. Subsequent chapters cover,

among other topics, the theories of individual choice behavior, binary and multinomial choice models, aggregate forecasting techniques, estimation methods, tests used in the process of model development, sampling theory, the nested-logit model, and systems of models. Discrete Choice Analysis is ninth in the MIT Press Series in Transportation Studies, edited by Marvin Manheim.

As he persuasively argues, the mathematical concepts that arose and flourished in the ancient world enabled the creation of architectural masterpieces as well as the establishment of vast trade networks.

The contents of this book are focused on commonly encountered symptoms, with their differential diagnosis in a concise form, which will lead to a working diagnosis and investigations. The emphasis is on the axiom, 'common diseases present commonly, and its converse, uncommon diseases present uncommonly'. However, pointers to 'red flags', i.e. uncommon manifestations of common diseases should alert the physician of serious diseases not to be missed. No attempt has been made to discuss etiology or pathology of illness, or the complexities of practice management. The frequency with which a disease is encountered by physician will depend upon its prevalence in the region from which their patients are drawn and also their specialty; therefore, regional variations in the incidence of diseases or methodology, or guidelines for investigations and diagnosis are not discussed, which should be accessed from other relevant sources. The book assumes much basic knowledge and the information it contains must be supplemented by further reading. Cover a spectrum of symptoms with emphasis on practical features of diagnosis, based on recent evidence-based guidelines. The contents of the book are intended for medical students, internists, and house-officers during their daily office or hospital practice, and also to physicians to boost their diagnostic skills during their practice day, and preparation for 'rounds' and clinical teaching.
