“Ed Hess’s Hyper-Learning is uniquely practical and is the essential starting point for charting new ways of thinking, living, working, leading, and being fulfilled in our new world.” –Gary Roushead, Admiral, US Navy (retired) former Chief of Naval Operations
The Digital Age will raise the question of how we humans will stay relevant in the workplace. To stay relevant, we have to be able to excel cognitively, behaviorally, and emotionally in ways that technology can’t. Professor Ed Hess believes that requires us to become Hyper-Learners: continuously learning, unlearning, and relearning at the speed of change. To do that, we have to overcome our reflexive ways of being: seeking confirmation of what we believe, emotionally defending our beliefs and our ego, and seeking consensus of our mental models. Hyper-Learning requires a new way of being and a radical new way of working. In Part I of this how-to book, Hess takes a practical workbook approach and helps readers create their Hyper-Learning Mindset, choose and embrace their needed Hyper-Learning Behaviors, and adopt their daily Hyper-Learning Practices. In Part 2, Hess focuses on how to humanize the workplace to optimize Hyper-Learning. Featuring case studies of three business leaders and two public companies, this book shows how to harness the power of human emotions, choices, and behaviors to enable the highest levels of human cognitive, emotional, and behavioral performance—individually and organizationally.

El Hadji Sy is one of the most significant figures in African contemporary art. Since the late 1970s, the Senegalese artist and curator has helped shape the country’s thriving art scene through his innovative painting and performance art. But El Sy is also an internationally recognized activist, having founded the collectives Laboratoire Agit-Art and Teng, which aim to create contemporary art that engages with the country’s pressing social and political issues. The first comprehensive publication on El Sy, this book places the artist’s work in the context of activism in Senegal since the country gained independence from France in 1960. Included are critical essays by Hans Belting, Elvira Dyangani Ose, and Pablo Lafuente who explore post-independence aesthetics and the effect of postwar relations between Germany and Senegal. The critical essays are supplemented with copious illustrations from the artist’s archive—many never before

Shortlisted for the British Psychological Society Book Award for Popular Science Much of value has been written about sleep, but rest is different: it is how we unwind, calm our minds and recharge our bodies. The Art of Rest draws on ground-breaking research Claudia Hammond collaborated on! “The Rest Test”, the largest global survey into rest ever undertaken, completed by 18,000 people across 135 different countries. The survey revealed how people get rest and how it is directly linked to your sense of wellbeing. Counting down through the top ten activities which people find most restful, Hammond explains why rest matters, examines the science behind the results to establish what really works and offers a roadmap for a new, more restful and balanced life.

With extensive research and entertaining examples, Dr. Laurie Hollman, PhD, provides five simple steps to help parents better understand the context of children’s perplexing behavior and how to cultivate real change.

Micrographic reproduction of the 13 volume Oxford English dictionary published in 1933.

The fourteen essential conversations to have with your tween and early teenager to prepare them for the emotional, physical, and social challenges ahead, including scripts and advice to keep the communication going and stay connected during this critical developmental window. “This book is a gift to parents and teenagers alike.”—Lisa Damour, PhD, author of Untangled and Under Pressure Trying to convince a middle schooler to listen to you can be exasperating. Indeed, it can feel like the best option is not to talk! But keeping kids safe—and prepared for all the times when you can’t be the angel on their shoulder—is about having the right conversations at the right time. From a brain growth and emotional readiness perspective, there is no better time for this than their tween years, right up to when they enter high school. Distilling Michelle Icard’s decades of experience working with families, Fourteen Talks by Age Fourteen focuses on big, thorny topics such as friendship, sexuality, impulsivity, and technology, as well as unexpected conversations about creativity, hygiene, money, privilege, and contributing to the family. Icard outlines a simple, memorable, and family-tested formula for the best approach to these essential talks, the BRIEF Model: Begin peacefully, relate to your child, interview to collect information, Echo what you’re hearing, and give Feedback. With wit and compassion, she also helps you get over the most common hurdles in talking to teens, including: • What phrases invite connection and which irritate kids or scare them off • The best places, times, and situations in which to initiate talks • How to keep kids interested, open, and engaged in conversation • How to exit these chats in a way that keeps kids wanting more Like a Rosetta Stone for your tween’s confounding language, Fourteen Talks by Age Fourteen is an essential communication guide to helping your child through the emotional, physical, and social challenges ahead and, ultimately, toward teenage success.

In the past decades the “German-Jewish phenomenon” (Derrida) has increasingly attracted the attention of scholars from various fields: Jewish studies, intellectual history, philosophy, literary and cultural studies, critical theory. In all its complex dimensions, the post-enlightenment German-Jewish experience is overwhelmingly regarded as the most quintessential and charged meeting of Jews with the project of modernity. Perhaps for this reason, from the eighteenth century through to our own time it has been the object of intense reflection, of clashing interpretations and appropriations. In both micro and macro case-studies, this volume engages the multiple perspectives as advocated by manifold interested actors, and analyzes their uses, biases and ideological functions over time in different cultural, disciplinary and national contexts. This volume includes both historical treatments of differing German-Jewish understandings of their experience - their relations to their Judaism, general culture and to other Jews - and contemporary reflections and competing interpretations as to how to understand the overall experience of German Jewry.

WHAT ARE YOU DOING WITH YOUR LIFE?J. KRISHNAMURTII TEACHINGS FOR TEENS, edited by Dale Carlson. Teens learn to understand the self, the purpose of life, work, education, relationships. Through paying attention rather than accepting the authority of their conditioning, they can find out for themselves about love, sex, marriage, work, education, the meaning of life and how to change themselves and the world. The Dalai Lama calls Krishnamurti “One of the greatest thinkers of the age.”

This dissertation focuses on two fundamental sorting problems: string sorting and suffix sorting. The first part considers parallel string sorting on shared-memory multi-core machines, the second part external memory suffix sorting using the induced sorting principle, and the third part distributed external memory suffix sorting with a new distributed algorithmic big data framework named Thrill.

An empowering guide that will show you how to shed the myth of the “work-life balance” by merging the seven key components that make up your life to attain harmony and whole-life success “All of us have Seven Slices in our lives: our Family Slice, our Professional Slice, our Personal Slice, our Physical Slice, our Intellectual Slice, our Spiritual Slice, and our Spiritual Slice. These all need to be served in some fashion—and in serving them, they, in turn, serve us.” This relatively simple but profoundly critical concept is at the heart of the method executive coach David McNeff has used to transform the lives and careers of his clients. It begins with two important facts: 1) stress happens—you can’t avoid it; and 2) your existence is composed of far more than “work” and “life.” Too often, we divide our lives into those two general categories, but we’re all a lot more complex and our lives are richer than that. By being clear and mindful of all aspects of your life—the Seven Slices—you’ll be more likely to find inner harmony when stress impacts one of them. In The Work-Life Balance Myth, McNeff takes you on a deep dive into each of the Seven Slices, explaining the components of each Slice, signs that you may not be attending to each Slice in a healthy way, and hands-on methods for accessing an underserved Slice. The Work-Life Balance

Myth won’t make your life perfect—no one can do that, and you shouldn’t trust anyone who makes that promise. What this book will do is provide you with proven new ways of framing your life, seeing stress for what it is, and vastly improving your ability to navigate the emotional challenges that will inevitably arise in a way that serves your Seven Slices.

OPRAH’S BOOK CLUB PICK A NEW YORK TIMES BESTSELLER “A roadmap on the journey to truth and authenticity… [The Way of Integrity] is filled with aha moments and practical exercises that can guide us as we seek enlightenment.” –Oprah Winfrey Bestselling author, life coach, and sociologist Martha Beck explains why “integrity”-needed now more than ever in these tumultuous times—is the key to a meaningful and joyful life As Martha Beck says in her book, “Integrity is the cure for psychological suffering. Period.” In The Way of Integrity, Beck presents a four-stage process that anyone can use to find integrity, and with it, a sense of purpose, emotional healing, and a life free of mental suffering. Much of what plagues us—people pleasing, staying in stale relationships, negative habits—all point to what happens when we are out of touch with what truly makes us feel whole. Inspired by The Divine Comedy, Beck uses Dante’s classic hero’s journey as a framework to break down the process of attaining personal integrity into small, manageable steps. She shows how to read our internal signals that lead us towards our true path, and to recognize what we actually yearn for versus what our culture sells us. With techniques tested on hundreds of her clients, Beck brings her expertise as a social scientist, life coach and human being to help readers to uncover what integrity looks like in their own lives. She takes us on a spiritual adventure that not only will change the direction of our lives, but also bring us to a place of genuine happiness.

Living among other people, in their families and communities, children become aware from a very early age of questions related to justice, and they search for the meaning of the world. By fostering an understanding of human rights, shaping opinin and developing attitudes, human rights education strongly

supports this natural interest and learning process. This is what human rights education is about and this is what ‘Compassito manual on human rights education for children’ is for.‘Compassito’ is a starting point for educators, teachers and trainers who are ready to deal with human rights education with children of 7-13 years. The book covers the key concepts of human rights and children’s rights, and provides substantial theoretical background to 13 key human rights issues, such as democracy, citizenship, gender equality, environment, media, poverty, and violence.The 42 practical activities serve to engage and motivate children to recognise human rights issues in their own environment. They help children to develop critical thinking, responsibility and a sense of justice, and help them learn how to take action to contribute to the betterment of their school or community. The manual also gives practical tips on how it can be used in various formal and non-formal educational settings.

Manual on Human Rights Education for Children

How do people come up with truly original ideas? The answer is to think outside the box—way outside. For the past decade, Cyril Bouquet, Jean-Louis Barsoux, and Michael Wade, professors of innovation and strategy at IMD Business School, have studied inventors, scientists, doctors, entrepreneurs, and artists. These people, or “aliens,” as the authors call them, are able to make leaps of creativity, and use five patterns of thinking that distinguish them from the rest of us. These five patterns—Attention, Levitation, Imagination, Experimentation, and Navigation—lead to a fresh and flexible approach to problem-solving. Alien thinkers know how to free the imagination so it can detect hard-to-observe patterns. They practice deliberate ways to retreat from the world in order to have the big picture under a problem. And they approach ideas in systematic ways that reflect the constraints of reality. Though surprising and compelling stories, the authors show how readers can use this method to develop out-of-this-world ideas. ALIEN Thinking can help any of us find innovative solutions to the most difficult problems. With four realistic case studies...
