The Archaeology of Movement discusses movement in the past, including the relationships between mobility and place, moving bodies and material culture, and the challenges of studying past movement.

Drawing on a wide range of examples and different archaeological practices, The Archaeology of Movement provides an introduction for those interested in thinking about past movement beyond the 'fact of mobility'.

Almost since the beginning of the modern discipline of archaeology, movement has played a role in helping to

shape our understanding of the past. However, the issue of movement is complicated, and where it sits in relation to other indicators of the past is problematic. Until now it has received less serious scrutiny than it merits. This book seeks to address this lacuna by placing movement at the centre of our investigations into the archaeological record. The Archaeology of Movement is an excellent introduction for archaeologists, anthropologists, cultural geographers, and students interested in the ways movement has shaped our understanding of history and

the archaeological record. Over the past three decades, “landscape” has become an umbrella term to describe many different strands of archaeology. From the processualist study of settlement patterns to the phenomenologist’s experience of the natural world, from human impact on past environments to the environment’s impact on human thought, action, and interaction, the term has been used. In this volume, for the first time, over 80 archaeologists from three continents attempt a comprehensive definition of the ideas and practices of landscape archaeology,

covering the theoretical and the practical, the research and conservation, and encasing the term in a global framework. As a basic reference volume for landscape archaeology, this volume will be the benchmark for decades to come. All royalties on this Handbook are donated to the World Archaeological Congress. This book provides a short, readable introduction to historical archaeology, which focuses on modern history in all its fascinating regional, cultural, and ethnic diversity. Accessibly covering key methods and concepts, including

fundamental theories and principles, the history of the field, and basic definitions, Historical Archaeology also includes a practical look at career prospects for interested readers. Orser discusses central topics of archaeological research such as time and space, survey and excavation methods, and analytical techniques, encouraging readers to consider the possible meanings of artifacts. Drawing on the author's extensive experience as an historical archaeologist, the book's perspective ranges from the local to the global in order to

demonstrate the real importance of this subject to our understanding of the world in which we live today. The third edition of this popular textbook has been significantly revised and expanded to reflect recent developments and discoveries in this exciting area of study. Each chapter includes updated case studies which demonstrate the research conducted by professional historical archaeologists. With its engaging approach to the subject, Historical Archaeology continues to be an ideal resource for readers who wish to be introduced to this rapidly

winning historical archaeologist Laurie Wilkie takes her two loves and merges them into a brief, lively introductory textbook that is sure to actively engage students. She shows how her analysis of trinkets tossed from parade floats can illustrate major themes taught in introductory archaeology classes—from methods to economy, social identity to political power—introduced in a concrete, entertaining way. The strength of Wilkie ' s book is in showing how different theoretical models used by archaeologists lead to different research questions and different answers. The textbook covers all the major themes expected of brief introductory texts but is one that students will want to read. An accessible and wide-ranging

Forgotten Africa introduces the general reader and beginning student to Africa's past, emphasizing those aspects only known or best known from archaeological and related evidence. It covers four million years of history across the continent, examining important aspects of Africa's momentous human story. Graham Connah is concerned to raise public awareness, both inside and outside Africa, to this frequently overlooked and often forgotten subject. Forgotten Africa examines: * human origins, * the material culture of hunter

to Islamic culture from its earliest manifestations to the present This introduction to the archaeology of the Islamic world traces the history of the discipline from its earliest manifestations through to the present and evaluates the contribution made by archaeology to the understanding of key aspects of Islamic culture. The author argues that it is essential for the results of archaeological research to be more fully integrated into the wider historical study of the Islamic world. Covering traditional fixtures of archaeology, such as methods and prehistory, the new edition opens up the greater conversation of feminist archaeology and the current state of archaeology, discussing issues of sexual harassment and abuse, inclusion, and the lack of diverse voices in the field. The third edition highlights recent archaeological developments and the social and political contexts of archaeology, including the Dakota Access Pipeline (DAPL), Camp Delta (Guantanamo Bay), and Indigenous residential schools. The authors also manage to

integrate some playful topics, such as the archaeology of children ' s graffiti and the domestication of dogs, while delving further into contemporary issues like climate change. The ultimate goal is to encourage students to examine the world that surrounds them with new eyes using archaeological methodologies. The third edition incorporates more color images than in previous editions and is accompanied by an updated instructor ' s manual, test bank, and PowerPoint slides. In this volume, Douglas B. Bamforth offers an archaeological overview of the

Great Plains, the vast, open grassland bordered by forests and mountain ranges situated in the heart of North America.

Synthesizing a century of scholarship and new archaeological evidence, he focuses on changes in resource use, continental trade connections, social formations, and warfare over a period of 15,000 years. Bamforth investigates how foragers harvested the grasslands more intensively over time, ultimately turning to maize farming, and examines the persistence of industrial mobile bison hunters in much of the region as farmers

lived in communities ranging from hamlets to towns with thousands of occupants. He also explores how social groups formed and changed, migrations of peoples in and out of the Plains, and the conflicts that occurred over time and space. Significantly, Bamforth's volume demonstrates how archaeology can be used as the basis for telling long-term, problem-oriented human history. Developed with three educational levels in mind, The Archaeology Book takes you on an exciting exploration of history and ancient cultures. You'll learn both the techniques of the

An Introduction

***National Geographic Explorer and
TED Prize-winner Dr. Sarah Parcak
welcomes you to the exciting new
world of space archaeology, a
growing field that is sparking
extraordinary discoveries from
ancient civilizations across the
globe. In Archaeology from Space,
Sarah Parcak shows the evolution,

discoveries, revealing why space archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. And she shows us that if we heed the lessons of the past, we can shape a vibrant future. Includes Illustrations
Archaeological Theory in the New Millennium provides an account of

the changing world of archaeological theory and a challenge to more traditional narratives of archaeological thought. It charts the emergence of the new emphasis on relations as well as engaging with other current theoretical trends and the thinkers archaeologists regularly employ. Bringing together different strands of global archaeological theory and placing them in dialogue, the book explores the similarities and differences between different contemporary trends in theory while also highlighting potential strengths and weaknesses of different approaches. Written in a way to maximise its accessibility, in direct contrast to many of the sources on which it draws, Archaeological Theory in the New

Millennium is an essential guide to cutting-edge theory for students and for professionals wishing to reacquaint themselves with this field.

Peter Drewett's comprehensive survey explores every stage of the dig process, from the core work of discovery and excavation to the final product: the published archaeological report. Main topics covered are: how an archaeological site is formed finding and recording archaeological sites planning excavations, digging the site and recording the results post-fieldwork planning, processing and finds analysis interpreting the evidence publishing the report. Illustrated with 100 photographs and line drawings, and using numerous case studies, Field Archaeology is
