is allergic to the neighbor's cat and cowers at the sight of mouse. But he also has a knack for arranging flowers and keeping Sarah company. And it's because of the elephant that Sarah meets her new next-door neighbor and makes her first real friend. It's because of the elephant that Sarah's mother starts spending more time with her. In fact, despite the destruction, just about everything good that happens is because of the elephant. It turns out that every home, and every nine-year-old girl, does need an elephant. A story about friendship, adventure, and never being afraid to be yourself, this hybrid graphic novel is the perfect introduction to chapter books for all the young animal-lovers in your life.

40 percent of the world's population, but until recently neither had played an influential role in the contemporary global economy. In the past two decades, China and India have liberalized internal economic policy, treatment of foreign investment, and trade, and have experienced economic growth at sustained high rates. From the point of view of the United States, however, the most important development in the Chinese and Indian economies in the long term may be the strides they are making in developing their own domestic innovation capacities. After a long period of underinvestment, both

countries have committed to growing their science and education systems to bolster research and further economic expansion. Some observers of the recent growth have said that both countries are surging in their efforts to spur innovation; others have emphasized the potential of one country over the other; and still others have suggested that both China and India have a long way to go before achieving innovation-driven growth. With such a range of views, The National Academies set out to describe developments in both countries, in relation to each other and the rest of the world, by organizing a conference

Yanzhong Huang examines China's and India's participation in three dimensions of global health governance (GHG): health-related foreign assistance, the development and implementation of global health rules, and the ideational foundations of their participation. Overall, both countries are increasingly active in participating in GHG, but they not only fail to shoulder significantly more responsibilities in GHG but

India Turns East tells the story of India's long and difficult journey to reclaim its status in a rapidly changing Asian environment increasingly shaped by the US-China rivalry and the uncertainties of US commitment to Asia's security. The Look East policy initially aimed at

reconnecting India with Asia's economic globalisation. As China became more assertive, Look East rapidly evolved into a comprehensive strategy with political and military dimensions. Frederic Grare argues that, despite this rapprochement, the congruence of Indian and US objectives regarding China is not absolute. The two countries share similar concerns, but differ in their tactics as well as their thoughts about the role China should play in the emerging regional architecture. Moreover, though bilateral US policies are usually perceived positively in New Delhi, paradoxically, the multilateral

China and India are the most extraordinary economic success stories of the developing world. Both nations' economies have grown dramatically over the past few decades, elevating them from two of the world's poorest countries into projected economic superpowers. As a result, the numbers of Chinese and Indians living in poverty have rapidly fallen and per capita

incomes in China and India have quadrupled and doubled, respectively. This book investigates the reasons for these staggering accomplishments and the lessons that can be applied both to other developing nations and to the problem of poverty that remains in these two countries. The contributors pay particular attention to agriculture and the rural economy, examining how initial conditions and investments and the prioritization and sequencing of different policies and strategies have led to successes, and how the agricultural and rural sectors connect to overall economic expansion. They also emphasize

the importance of anti-poverty programs and safety nets in helping poor people escape poverty. The book offers a set of policy and strategic options for future growth and poverty reduction. These include setting the right priorities for public spending, identifying trade and market reforms, building social safety nets for the poorest of the poor, and building accountable institutions that can provide public goods and services effectively. The book concludes by examining future challenges to China and India's economic development, such as the need to ensure growth that is sustainable,

story of Toka, Thika, and Iringa, the last three elephants at the zoo in Toronto, Ontario. Lonely for a larger herd, sick from the cold climate, and weak from standing for long days in a too-small concrete enclosure, the elephants desperately needed a change. The zoo and animal activists agreed that they should be moved to a healthier home, but the best option—the Performing Animal Welfare Society (PAWS) sanctuary in distant California—seemed like an impossible dream. In *Elephant Journey*, leading activist and award-winning author Rob Laidlaw unfolds the journey of how that impossible dream was realized. In clear, straightforward prose, he describes the elephants' experiences on the journey of three days and 4,100 kilometers that brought them to the sanctuary at last. This book provides a powerful diagnosis of why the global governance of science struggles in the face of emerging powers. Through unpacking critical events in China and India over the past twenty years, it demonstrates that the 'subversiveness' assumed in the two countries' rise in the life sciences reflects many of the regulatory challenges that are shared worldwide. It points to a decolonial imperative for science governance to be responsive and effective in a cosmopolitan world. By highlighting epistemic injustice within contemporary science, the book extends theories of decolonisation.

Elephant Calves

Elephants do not belong in trees. It's not natural. It makes other animals uncomfortable. This is the story of Larry, an elephant who wanted to live in a tree. This is a story about being the new kid and being a little bit different (okay, A LOT different). A story about acceptance and making friends. When Larry decides he wants to live in the big bushy tree in the middle of the wide-open field, the current residents, Bird, Squirrel and Monkey, are not very welcoming. They throw nuts
