A History of Gold Dredging in Idaho tells the story of a revolution in placer mining—and its subsequent impact on the state of Idaho—from its inception in the early 1880s until its demise in the early 1960s. Idaho was the nation's fourth-leading producer of dredged gold after 1910 and therefore provides an excellent lens through which to observe the practice and history of gold dredging. Author Clark Spence focuses on the two most important types of dredges in the state—the bucket-line dredge and the dragline dredge—and describes their financing, operation, problems, and effect on the state and environment. These dredges made it possible to work ground

As these huge machines floated along, they dumped debris that harmed the streams and destroyed wildlife habitat, eventually prompting state regulations and federal restoration of some of the state's crippled waterways. Providing a record of Idaho's dredging history for the first time, this book is a significant contribution to the knowledge and understanding of Western mining, its technology, and its overall development as a major industry of the twentieth century.

Before the advent of the great mineral revolution in the latter half of the 19th century, South Africa was a sleepy colonial backwater whose unpromising landscape was seemingly devoid of any economic potential. Yet lying just beneath the dusty surface of the land lay the richest treasure trove of gold, diamonds, platinum, coal and a host of other metals and minerals that has ever been discovered in one country. It was the discovery and exploitation of first

Here, Chad Montrie examines the twentieth-century movement to outlaw surface mining in Appalachia, tracing popular opposition to the industry from its inception through the growth of a militant movement that engaged in acts of civil disobedience and industrial sabotage. Both comprehensive and comparative, *To Save the Land and People* chronicles the story of surface mining opposition in the whole region, from Pennsylvania to Alabama. Though many accounts of environmental activism focus on middle-class suburbanites and emphasize national events, the campaign to abolish strip mining was primarily a movement of farmers and working people, originating at the local and state levels. Hundreds of towns in Arizona owed their longevity or in many cases their ephemeral existence based upon the productivity of the local mines. Extensive mapping of the territory was undertaken, not specifically for settlement but for mineral discoveries and for ensuring the ease of extraction from the ground to the market. Mining captivated the Native Americans, Spanish, Mexicans and later the great influx of American miners and pioneers who arrived in Arizona after the Gadsden Purchase of 1854.

local natives used rocks to pound copper free from the earth, shaping it into goods traded across the continent. It was not long before European settlers followed up on the natives' work, and when industry came to Copper Country, mines sprung up, quickly dominating the economy and lives of the Upper Peninsula's residents. Copper was not the only mineral harvested from the earth. Iron mines spread out as well, becoming profitable if less known than their copper cousins. Even less well known but just as integral to the Peninsula's history, gold and silver prospectors prowled the land, looking for metals whose value had started and ended empires.

Mining, especially copper mining, left a deep mark in the Upper Peninsula by affecting the region's growth, landscape, culture, and economic structure. Where once a booming industry churned out tons of copper, feeding the nation's need for the ever utilitarian metal, there now lay empty shafts and a few mines, still scraping metals from the earth. Though the heyday of mining in the state has long passed, its mark on the region, the state, and the nation itself remains, and it all started long before the first men of Europe set foot in the Americas. Iron mining continues, though the industry is now a pale shadow of its former self. Though not as extensive

or well known as copper mining, the iron mines also played an important role in the region, and they also supported much of the region's silver and gold prospecting and mining. Though no great gold or silver mines came as a result of the exploring conducted by the many prospectors, the constant efforts to pull the precious metals from the region demonstrate the grit, determination, and sheer gumption of those who traveled north to stake their claims and build new lives. The miners and workers faced their hard times like many others, but, by and large, the history of the mines, as well as the companies that ran them and the miners who
