The Multidimensional Manager 24 Way S To Impact Your Bottom Line In 90 Days Paperback

How do political ideologies and urban landscapes intersect in the context of globalization? This volume illuminates the production of ideologies as both discursive and spatial phenomena in distinct contributions that ground their analysis in cities of the Global North and South. From Sydney to Singapore, Hong Kong to Hanoi, Las Vegas to Macau, conventional public spaces are in decline as sites of ideological dissent. Instead, we are witnessing the colonisation of urban space by market globalism (today's dominant global ideology) and securitised surveillance regimes. Against this backdrop, how should we interpret the proliferation of metaphors that claim to communicate the essence of global transformation? In what ways do space and language work together to normalise the truth claims of powerful ideological players? What kinds of social forces mobilise to contest the cooptation of language and space and to pose alternative local and global futures? This volume poses these questions against the collapse of old geographical scales and cartographic techniques for identifying the contours of civil society. The city acts as an entry point to a new spatial analytics of contemporary ideological forces. This book was published as a special issue of Globalizations. This book offers a broad perspective on the field of cognitive engineering and neuroergonomics, covering emerging practices and future trends toward the harmonious integration of human operators and computer systems. It presents novel theoretical findings on mental workload and stress, activity theory, human reliability, error and risk, and neuroergonomic measures alike, together with a wealth of cutting-edge applications. Further, the book describes key advances in our understanding of cognitive processes, including mechanisms of perception, memory, reasoning, and motor response, with a special emphasis on their role in interactions between humans and other elements of computer-based systems. Based on the AHFE 2018 affiliated conference on Neuroergonomics and Cognitive Engineering, held on July 21–25, 2018, in Orlando, Florida, USA, it provides readers with a comprehensive overview of the current challenges in cognitive computing and factors influencing human performance.

This book provides an accessible introduction and practical guidelines to apply asymmetric multidimensional scaling, cluster analysis, and related methods to asymmetric one-mode two-way and three-way asymmetric data. A major objective of this book is to present to applied researchers a set of methods and algorithms for graphical representation and clustering of asymmetric relationships. Data frequently concern measurements of asymmetric relationships between pairs of objects from a given set (e.g., subjects, variables, attributes,...), collected in one or more matrices. Examples abound in many different fields such as psychology, sociology, marketing research, and linguistics and more recently several applications have appeared in technological areas including cybernetics, air traffic control, robotics, and network analysis. The capabilities of the presented algorithms are illustrated by carefully chosen examples and supported by extensive data analyses. A review of the specialized statistical software available for the applications is also provided. This monograph is highly recommended to readers who need a complete and up-to-date reference on methods for asymmetric proximity data analysis.

In today's aggressive marketplace, listed companies can no longer rely on their numbers to do the talking. If companies can't communicate their achievements and strategy, mounting research evidence suggests, they will be overlooked, their cost of capital will increase and stock price will suffer. In Strategic Financial and Investor Communication: the stock price story Ian Westbrook, principal of Australia's leading independent financial communications firm, argues just this: stock price is more a story than a number. Moreover, the book will teach you how to tell your own story by guiding you through the fast-paced world of financial corporate communication with a professional's pragmatism as well as academic rigour. Whether you're a student or a professional of PR, investor relations or corporate communications, this much-needed guide will teach you how to tell a compelling story about your company that the stockbroker, fund manager and corporate media cannot ignore.

*This book brings together a variety of the best papers from an international research
symposium on organisational behaviour in healthcare. It includes contributions from
key names such as Sandra Dawson and Peter Spurgeon with a foreword by Rosemary
Stewart. Also including chapters from Australia, Canada and Europe, it is consciously
international in perspective and aims to relate the public sector agenda as a
comparator for developments in the US.*
*In this book Linda Holbeche offers an historical narrative on the changing landscape
of work since the 1980s and considers how definitions of organizational effectiveness
have changed over time. She considers the characteristics and effects of the neo-
liberal work culture of new capitalism, and how HRM practices have contributed to*

shaping this work culture. Influencing Organizational Effectiveness challenges mainstream thinking around business strategy, change and organizational effectiveness, and about the roles of HRM and management. While the overall tone of the book is critical, Holbeche argues that HRM can play an active role in giving voice to employees and advancing organizational effectiveness. Grounded in research, this book includes reflective questions, case studies and helpful guidelines to support HRM and organizational development professionals and master's-level students. It illustrates what 'better' might look like and how HRM can contribute to a new definition of effectiveness which is aligned to the needs of modern organizations.

There is no term that better describes the essential features of human society than complexity. On various levels, from the decision-making processes of individuals, through to the interactions between individuals leading to the spontaneous formation of groups and social hierarchies, up to the collective, herding processes that reshape whole societies, all these features share the property of irreducibility, i.e., they require a holistic, multi-level approach formed by researchers from different disciplines. This Special Issue aims to collect research studies that, by exploiting the latest advances in physics, economics, complex networks, and data science, make a step towards understanding these economic and social systems. The majority of submissions are devoted to financial market analysis and modeling, including the stock and cryptocurrency markets in the COVID-19 pandemic, systemic risk quantification and control, wealth condensation, the innovation-related performance of companies, and more. Looking more at societies, there are papers that deal with regional development, land speculation, and the-fake news-fighting strategies, the issues which are of central interest in contemporary society. On top of this, one of the contributions proposes a new, improved complexity measure.

This book provides an analysis of the highly politicized field of Roma inclusion and addresses the controversies surrounding the effectiveness of funding initiatives derived from European Cohesion Policy. It confronts the widely held notion that European financial transfers (Structural Funds) are highly suitable instruments to address the systemic causes of poverty and to facilitate changes towards substantive equality for

Europe's largest ethnic minority. Shedding critical light on the Structural Funds programme, it offers an innovative approach to thinking about the value of European funding schemes and efficacy of national Roma inclusion strategies. Multidisciplinary in approach, it draws on rich interview material and literature from fields including policy implementation, new public governance, equality studies, and political representation, Financing Roma Inclusion with European Structural Funds examines the implementation of European funding in Spain and Slovakia, two countries with contrasting policy outputs, and offers a nuanced picture of the way European Cohesion Policy interacts with intricacies of domestic policy-making. It thus sheds light on the key challenges facing Roma inclusion strategies in contemporary Europe and will be of interest for for scholars interested in European studies, equality policy, new public governance and minority studies.

A Systems-behavioral Approach with Case Studies

Beginning in 1948 with Paramount's Saigon and Universal's Rogue's Regiment, Hollywood has produced hundreds of features and made-for-television films about Vietnam and the ensuing conflict. With the exception of The Green Berets (1968), few were designed to rally Americans to the cause as earlier war movies had done. Many were not even combat films, instead dealing with such domestic issues as protests, veteran re-entry, MIAs and POWs. Arranged chronologically, this is a critical analysis of Vietnam War films from 1948 through 1993. Recurring themes are stressed along with the ways that movie America reflected the national reality, with essays blending plot synopses and critical commentary. The movies run the gamut of genres: dramas, action, adventure, horror, comedies and even one musical.

This book traces the history of private military companies, with a special focus on UK private forces. Christopher Kinsey examines the mercenary companies that filled the ranks of many European armies right up to the 1850s, the organizations that operated in Africa in the 1960s and early 1970s, the rise of legally established private military companies in the late 1970s and early 1980s, and today's private and important actors in international security and post-conflict reconstruction. He shows how and why the change from the mercenary organizations of the 1960s and 1970s came about, as the increasing newness of private military companies came to be recognised. It then examines how PMCs have been able to impact upon international security. Finally, Kinsey looks at the type of problems and advantages that can arise for organizations that decide to use private

military companies and how they can make an unique contribution to international security. Corporate Soldiers and International Security will be of great interest to all students of international politics, security studies and war studies.
