Confused by ActionScript? Want to get to grips with creating interactive graphics and animation in Flash quickly? Whether you are a new user or a professional illustrator, designer or animator experienced in other animation and effects packages, this highly visual, color book will be all you need to get you up and running with the latest powerful upgrade - Flash MX 2004. Birgitta Hosea uses tried and tested material based on her teaching, breaking down the software into its main components and providing lots of screenshots and simple step-by-step instructions. This encourages you to get the most out of the programme and fully develop your skills, whilst allowing those with particular needs to 'jump ahead'. The structure and style, influenced by her commercial and creative expertise, allows you either as a student or professional to dip in and out according to the needs of your specific projects, but also allows the exploration of the programmes capability when you have more time. It is a generalist, accessible, visual and a truly introductory guide, written from the perspective of a designer with a thorough coverage of the basic features of Flash MX 2004, without going too in-depth into coding with ActionScript. Birgitta Hosea is a motion graphics artist and Course Director of the London Animation Studio at Central Saint Martins College of Art and Design. Her experience ranges from designing idents and promotional materials to working as an Art Director on pop promos and short films.

This book is nothing less than a complete and comprehensive survey of the state-of-the-art of terrorism informatics. It covers the application of advanced methodologies and information fusion and analysis. It also lays out techniques to acquire, integrate, process, analyze, and manage the diversity of terrorism-related information for international and homeland security-related applications. The book details three major areas of terrorism research: prevention, detection, and established governmental responses to terrorism. It systematically examines the current and ongoing research, including recent case studies and application of terrorism informatics techniques. The coverage then presents the critical and relevant social/technical areas to terrorism research including social, privacy, data confidentiality, and legal challenges.

About the book ENGLISH MADE EASY introduces basic concepts of grammar in a format which inspires the reader to use linguistic arguments. The target audience for the book is school students; covering the introductory syntax level and going through to more advanced college level material. For this reason, the book starts from the beginning and tries to make as few pictures as possible about linguistic notions. A student pursuing an academic course can easily comprehend the next and grasp the ideas if he is equipped with a good knowledge of language; and fare better in the examination.

The University of Arizona Artificial Intelligence Lab (AI Lab) Dark Web project is a long-term scientific research program that aims to study and understand the international terrorism (Ihadtist) phenomena via a computational, data-centric approach. We aim to collect "ALL" web content generated by international terrorist groups, including web sites, forums, chat rooms, blogs, social networking sites, videos, virtual world, etc. We have developed various multilingual data mining, text mining, and web mining techniques to perform link analysis, content analysis, web metrics (technical sophistication) analysis, sentiment analysis, authorship analysis, and video analysis in our research. The approaches and methods developed in this project contribute to advancing the field of Intelligence and Security Informatics (ISI). Such advances will help stake holders to perform terrorism research and facilitate international security and peace. This monograph aims to provide an overview of the Dark Web landscape, suggest a systematic, computational approach to understanding the problems, and illustrate with selected techniques, methods, and case studies developed by the University of Arizona AI Lab Dark Web team members. This work aims to provide an interdisciplinary and understandable monograph about Dark Web research along three dimensions: methodological issues in Dark Web research; database and computational techniques to support information collection and data mining; and legal, social, privacy, and data confidentiality challenges and approaches. It will bring useful knowledge to scientists, security professionals, counterterrorism experts, and policy makers. The monograph can also serve as a reference material or textbook in graduate level courses related to information security, information policy, information assurance, information systems, terrorism, and public policy.

Portrait of a Dead Civilization

The University of Michigan Library Newsletter

This volume presents a review and evaluation of the palynological examination of Near and Eastern sediment cores covering the last 30,000 years, eith the aim of reconstructing the Late Quaternary vegetational history. The pollen evidence is supplemented by archaeobotanical data.As the vegetation of earlier times cannot be understood without knowledge of the modern vegetation in relation to environmental conditions, a synopsis of the topography, climate and (potential) natural vegetation is presented. Surface-sample studies inform us as a prerequisite for the interpretation of the fossil pollen spectra in terms of vegetations of the past.A major part of the book is devoted to the discussion of the regional vegetation histories, is presented. Palaeo-vegetation maps prepared for the Northwest Zagros Mountains, Southwestern Anatolia, Northwestern Anatolia and the Southern Levant illustrate the interpretation of the pollen data. The regional maps are of considerable use in the study of prehistoric settlement patterns. In addition, generalized palaeo-vegetation maps for the whole of the Near East, so far as covered by pollen cores, are presented.In a final chapter the interference of ancient man with the vegetation, as documented in the pollen record, is discussed. In spite of the evidence for large-scale forest clearances, most of the potential forest and woodland areas remained predominantly wooded probably until only a few centuries ago.The book is of interest to archaeologists, botanists, palynologists, climatologists, geomorphologists and geographers.

Web Site Design Made Easy teaches the basics of web design. While it does assume that students spend at least some time viewing web pages on the Internet and have basic computer skills, it assumes no other knowledge on their part. Not only will they learn to plan and create a working website, but they will discover many of the "tricks" that take a website from basic to cool and useful. Web design is a broad area that can encompass many things: coding knowledge, graphic design, copywriting, page layout, and more-even server software programming. One book cannot teach it all. This book mainly focuses on teaching HTML coding and formatting using CSS, utilizing both IBM Windows and Macintosh. Other areas are touched upon, but these basic skills will carry your student a long way toward their goal of website design. This book is a complete rewrite from previous editions. It has been updated to the latest versions HTML (version 4.01) and CSS (version 2.1). The lessons teach web design that is XHTML compliant, and students can learn how to make a purely XHTML web page. CSS, cascading style sheets, has been given an extremely thorough treatment with three chapters dedicated to the subject, along with it being referenced throughout the book.Dennis Gaskill, a.k.a. Boogie Jack, is one of the most popular web page designers on the web. Students will enjoy his humor and they will love his book! Boogie Jack has received thousands of testimonials from his monthlyAlmost a Newsletter subscribers, confirming what a great job he does instructing them to create web sites.

In this book, Aaron A. Burke explores the evolution of Amorite identity in the Near East from ca. 2500-1500 BC. He sets the emergence of a collective identity for the Amorites, one of the most famous groups in Ancient Near Eastern history, against the backdrop of both Akkadian imperial intervention and declining environmental conditions during this period. Tracing the migration of Amorite refugees from agropastoral communities into nearby regions, he shows how mercenarism in both Mesopotamia and Egypt played a central role in the acquisition of economic and political power between 2100 and 1900 BC. Burke also examines how the establishment of Amorite kingdoms throughout the Near East relied on traditional means of legitimation, and how trade, warfare, and the exchange of personnel contributed to the establishment of an Amorite koine. Offering a fresh approach to identity at different levels of social hierarchy over time and space, this volume contributes to broader questions related to identity for other ancient societies.

"This splendid work of scholarship . . . sums up with economy and power all that the written record so far deciphered has to tell about the ancient and complementary civilizations of Babylon and Assyria."**—Edward B. Garside, *New York Times Book Review Ancient Mesopotamia—the area now called Iraq—has received less attention than ancient Egypt and other long-extinct and more spectacular civilizations. But numerous small clay tablets buried in the desert soil for thousands of years make it possible for us to know more about the people of ancient Mesopotamia than any other land in the early Near East. Professor Oppenheim, who studied these tablets for more than thirty years, used his intimate knowledge of long-dead languages to put together a distinctively personal picture of the Mesopotamians of some three thousand years ago. Following Oppenheim's death, Erica Reiner used the author's outline to complete the revisions he had begun. "To any serious student of Mesopotamian civilization, this is one of the most valuable books ever written."—Leonard Cottrell, *Book Week "Leo Oppenheim has made a bold, brave, pioneering attempt to present a synthesis of the vast mass of philological and archaeological data that have accumulated over the past hundred years in the field of Assyriological research."—Samuel Noah Kramer, *Archaeology A. Leo Oppenheim, one of the most distinguished Assyriologists of our time, was editor in charge of the Assyrian Dictionary of the Oriental Institute and John A. Wilson Professor of Oriental Studies at the University of Chicago.*
