This book was first published in 2004. National economic growth is fueled by the development of high technology clusters such as Silicon Valley. The contributors examine the founding of ten clusters that have been successful at an early stage of growth in information technology. Their key finding is that the economics of starting a cluster is very different from the positive feedback loop that sustains an established cluster. While 'nothing succeeds like success' in an established cluster, far more difficult, risky and unlikely are the initial conditions that give rise to successful clusters. The contributors find regularities in the start of the successful clusters studied, including Silicon Valley around 1964. These cases contain 'old economy' factors such as competencies, firm building capabilities, managerial skills, and connection to markets, more than the flamboyant 'new economy' factors that have been highlighted in prevailing years.

Some companies can't change in response to market disruptions. Those companies die. Other companies do respond...eventually. They survive, but they see their profits squeezed, their growth flattened. Then, there are the long-term winners: companies that create their own disruptions and thrive on change. In Create Marketplace Disruption, Adam Hartung shows how to become one of those rare companies, creating lasting growth and profits. This book reveals why so many companies behave in ways that are utterly incompatible with long-term success...and why even "good to great" companies are struggling for air. You'll discover how to reposition your organization away from the Flats and Swamps of traditional Defend and Extend Management and back into the Rapids of accelerated growth. Hartung demonstrates how to attack competitors' Lock-ins, make their Success Formulas obsolete, and create the White Space needed to invent your own new formulas for success. Create Marketplace Disruption shows how disrupting yourself is critical to reaping the benefits of market changes, and part of a process that executives and strategists can reproduce over and over again for improved results. How we got into this mess—and how to get out of it The myth of perpetuity and the dark side of success Reinventing success: no more Defend and Extend Creating your new Success Formulas and keeping them competitively advantaged

Why have some Asian countries succeeded more than others? Jason Dedrick and Kenneth L. Kraemer delve into these questions and emerge with an explanation of the rapid rise of the computer industry in the Asia-Pacific region. Asia's Computer Challenge makes a systematic comparison of the historical development of the computer industries of Japan, Hong Kong, Korea, Singapore, and Taiwan and concludes that neither a plan versus market, nor a country versus company dichotomy fully explains the diversity found among these countries. The authors identify a new force--the emergence of a global production network. Reaching beyond specific companies and countries, this book explores the strategic implications for the Asian-Pacific countries and the United states. Now East Asia is faced with a

challenge; they must make the move from low margin hardware business to high margin software and information businesses, while Americans must respond by maintaining leadership in standards, design, marketing, and business innovation.

How should you grow your organization? It's one of the most challenging questions an executive team faces—and the wrong answer can break your firm. The problem is most firms' growth strategies emphasize just one type of growth—some focus on organic growth, others on M&A. When these strategies falter, the common response is simply to try harder—but firms falling into this "implementation trap" usually end up losing out to a competitor whose approach is more inclusive. So where do you start? By asking the right questions, argue INSEAD's Laurence Capron and coauthor Will Mitchell, of the Rotman School of Management at the University of Toronto and the University's Fuqua School of Business. Drawing on decades of research and teaching, Capron and Mitchell find that a firm's aptitude for determining the best resource pathways for growth has a defining impact on its success. They've come up with a helpful framework, reflecting practices of a variety of successful global organizations, to determine which path is best for yours. The resource pathways framework is built around three strategic questions: • BUILD: Are your existing internal resources relevant for developing the new resources that you have targeted for growth? • BORROW: Could you obtain the targeted resources via an effective relationship with a resource partner? • BUY: Do you need broad and deep relationships with your resource provider? Written for large multinationals and emerging firms alike, Build, Borrow, or Buy will help solve a perennial question and will guide you through change while priming your organization for optimal growth.

He has also updated all technical aspects of the first edition, covering new device and attachment technologies, new inspection techniques including optical, infrared and x-ray, and vectorless methods for detecting surface-mount open-circuit board failures. Territories of Profit compares Dell Computer, the dominant computer manufacturer of the late twentieth century, and G. F. Swift, the leading meatpacking firm of the late nineteenth century, to reveal how communications revolutions in different periods enabled businesses to innovate their operations, reorganize the structure of the firm, and reshape the geography of profit-making. By depicting the parallel experiences of Dell and Swift, which both deployed revolutionary communications technologies in their business systems and transformed patterns of development through their innovative advances, the book challenges simplified representations of the contemporary economy as historically unprecedented. Territories of Profit also incorporates information from interview sources within Dell to portray the "Dell Model" in ways never before revealed in existing studies of the PC maker.
