

works!

Perrault's Fairy Tales was originally written in 1697 by Charles Perrault. He was a French author and member of the Académie française. He laid the foundations for a new literary genre, the fairy tale, with his works derived from pre-existing folk tales. The Thirty Four Illustrations by Gustave Dore from the 'Volume Les Contes de Perrault Dessins' by Gustave Dore, 1867. The best known of his tales include Le Petit Chaperon rouge (Little Red Riding Hood), Cendrillon (Cinderella), Le Chat Botté (Puss in Boots) and La Barbe bleue (Bluebeard). Many of Perrault's stories were rewritten by the Brothers Grimm, continue to be printed and have been adapted to opera, ballet (such as Tchaikovsky's The Sleeping Beauty), theatre, and film (Disney). Perrault was an influential figure in the 17th century French literary scene, and was the leader of the Modern faction during the Quarrel of the Ancients and the Moderns.

Based on breakthrough new science in the field of hydration, Quench debunks many popular myths about "getting enough water" and offers a revolutionary five-day jump start plan that shows how better hydration can reduce or eliminate ailments like chronic headaches, weight gain, gut pain, and even autoimmune conditions. Chronic headaches, brain fog, fatigue, weight gain, insomnia, gut pain, autoimmune conditions. We may think these and other all-too-common modern maladies are due to gluten intake or too much sugar or too little exercise. But there is another missing piece to the health puzzle: Proper hydration. Yes, even in this era of Poland Spring many of us are dehydrated due to moisture-lacking diets, artificial environments, medications, and over-dependence on water as our only source of hydration. For this reason, that new diet or exercise plan may fail because our body doesn't have enough moisture to support it. Quench presents a wellness routine that can reverse all of that, based on breakthrough new science in the field of hydration. Readers will be surprised to learn that drinking too much water can flush out vital nutrients and electrolytes. Here is where "gal water" comes in: the water from plants (like cucumber, berries, aloe), which our bodies are designed to truly absorb right down to the cellular level. In fact, Ms. Bria's work as an anthropologist led her to the realization that desert people stay hydrated almost exclusively from what they eat, including gel plants like cactus. Based on groundbreaking science from the University of Washington's Pollack Water Lab and other research, Quench offers a five-day jump start plan: hydrating meal plans and the heart of the program, smoothies and elixirs using the most hydrating and nutrient-packed plants. Another unique feature of their approach is micro-movements -- small, simple movements you can make a few times a day that will move water through your fascia, the connective tissue responsible for hydrating our bodies. You will experience more energy, focus, and better digestion within five days . . . then move onto the lifetime plan for continued improvements, even elimination of symptoms.

A renowned dermatologist who was responsible for introducing alpha-hydroxy acids outlines a regimen of internal and external skin care designed to repair and improve the skin using easily accessible over-the-counter products. Reprint. 50,000 first printing.
