Praise for the Book: Beautifully written! The author has succeeded in relaying technical theatre information without being too technical and putting the reader to sleep. I read three sentences and instantly knew this book was for me and the way I teach. When I think back on the insufferable intro to tech theatre books I had to read, I feel cheated I didn't have this one as a student. I will be using this text in my class! -- Rob Napoli, Designer and Technical Director at Penn State University, Berks Campus This text has tempted me to return to teaching with a textbook for the first time in seven years. The language is both accessible and informal yet the text goes a long way in debunking some of the typical jargon that may alienate students just getting into the field, or trying it out for the first time. The illustrations (the text is full of them) coupled with the stories reinforce the fundamental information being conveyed. -- John Paul Devlin, Associate Professor of Theatre at Saint Michael's College What a great idea! "First courses in the world of theatrical design and production, like the art they introduce, come in a bewildering array of shapes, sizes, textures, and colors. Some students receive their introduction to this subject area in a general overview course that covers the design and production elements of scenery, costumes, lighting, and sound in a single semester. Other students may enjoy the luxury of an entire year in which to discuss the same material. Still others may take individual courses that specialize in the theory and craft of the separate areas that comprise the field of theatrical design and technical production. The course content is very flexible indeed. To create a text that will serve the needs of all these courses is a distinct challenge. I've tried to rise to that challenge by organizing the material in two ways. The chapters appear in a logical sequence, but each chapter is also an island of information that can stand alone. My hope is that this organization will enable each instructor to pick and choose the type and amount of material that is appropriate for his or her particular course. This type of organization also makes the text a useful reference for students to keep throughout their design and technical production careers"--
