This book is a story of a great adventure arising from a business where adventures could be least expected. Although it's hero, the late Tomas Bata, kept his eyes focused sharply on the ground (in the shoe business—he has to) his mind was soaring high in dreams of a mission to make all mankind well shod. How he did it and what his motives and accomplishments were is presented in this biography of the man and his time with considerable detail and first hand knowledge. We see a man, who having run away from home at the age of fourteen to start his own business, was continuously impatient with both time and environment visualizing the opportunities which, although at hand, were never noticed by his competitors during his life. He was man who could visualize such opportunities even in the most difficult situations as indicated from his attitude toward the Great Depression of 1929: "Half of mankind is barefoot and only a fraction of the world's population is well shod," he said at the time of world-wide unemployment. "Look how little we've done so far and how much work is waiting for all shoemakers every-where in the world." And when the difficulties continued, he growled into their faces in 1930: "I would rather work for nothing than do nothing. Only when you work, can you keep hoping to find a way." Shoemaker, salesman and organizer of many industries, Tomas Bata was a man among men, changing the simple folk in and around his birthplace into modern industrial workers and managers of business and salesmen resembling a now almost extinct type of man who, in their pursuit of their business, have discovered in former centuries new territories and lifted up the standard of life and living everywhere. Necessity made him a politician to obtain the right to rebuild a whole city, a teacher pioneering new methods of education, a builder who combined building of factories and houses with a businessman type of social service. However, he was first and always an entrepreneur extraordinary. As such, he attacked every problem with gusto of a prize fighter, and the zeal of a missionary, transferring an ideal into ideas—and these again into plans and actions. Ideal? What ideal and ideas? Some of them can be discerned from the pages of this book, others in the fierce loyalty and performance of the men whom he brought up to spread his message of entrepreneurship to the four corners of the world. In some ways, and perhaps indirectly, a reader could take this book as a challenge. If its hero succeeded in turning a simple business into a real adventure of service and a powerful way of life, why not you? Today's world needs men of Tomas Bata's caliber as much as his world needed them several decades ago, and perhaps nowadays even more. It is this type of man who provides the answers to the crucial questions of our time, i.e., whether our society, enjoying the good things of life, will survive as a home of free men. This, in the author's concept, is a final message arising from the biography of this extraordinary man, Tomas Bata: "He only earns his freedom and existence who daily conquers them anew."

How do the rich get rich? An updated edition of the "remarkable" New York Times bestseller, based on two decades of research (The Washington Post). Most of the truly wealthy in the United States don't live in Beverly Hills or on Park Avenue. They live next door. America's wealthy seldom get that way through an inheritance or an advanced degree. They bargain-shop for used cars, raise

children who don't realize how rich their families are, and reject a lifestyle of flashy exhibitionism and competitive spending. In fact, the glamorous people many of us think of as "rich" are actually a tiny minority of America's truly wealthy citizens—and behave quite differently than the majority. At the time of its first publication, The Millionaire Next Door was a groundbreaking

examination of America's rich—exposing for the first time the seven common qualities that appear over and over among this exclusive demographic. This edition includes a new foreword by Dr. Thomas J. Stanley—updating the original content in the context of the financial crash and the twenty-first century. "Their surprising results reveal fundamental qualities of this group that are

diametrically opposed to today's earn-and-consume culture." —Library Journal

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies.Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were

installed in Maritime Administration's three region schools.It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook.This newly updated manual, the fourth revision, in keeping with

Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation.Robert J. BlackwellAssistant Secretary for Maritime Affairs

Over recent years there has been major investment in research infrastructure to harness the potential of routinely collected health data. In 2013, The Farr Institute for Health Informatics Research was established in the UK, undertaking health informatics research to enhance patient and public health by the analysis of data from multiple sources and unleashing the value of vast sources of clinical, biological, population and environmental data for public benefit. The Medical Informatics Europe (MIE) conference is already established as a key event in the calendar of the European Federation of Medical Informatics (EFMI); The Farr Institute has been establishing a conference series. For 2017, the decision was made to combine the power and established reputational excellence of EFMI with the emerging and innovative research of The Farr Institute community to create 'Informatics for Health 2017', a joint conference that creates a scientific forum allowing these two communities to share knowledge, insights and experience, advance cross-disciplinary thinking, and stimulate creativity.This book presents the 116 full papers presented at that conference, held in Manchester, UK in April 2017. The papers are grouped under five headings: connected and digital health; health data science; human, organisational, and social aspects; knowledge management; and quality, safety, and patient outcomes, and the book will be of interest to all those whose work involves the analysis and use of data to support more effective delivery of healthcare.

Julian "Tusker" Tusk, an American archaeologist, is excavating a shipwreck half a world from home when a research boat catches fire and sinks, killing an old friend. The tragedy sets in motion a dangerous quest for truth that pulls Tusker into a sinister plot spanning 75 years, from World War II Ceylon to modern day Sri Lanka. Along the way, he matches wits with a psychopathic mercenary, discovers a long lost ship with an explosive secret, and falls for a beautiful marine biologist who is at least as strong as he is. In the end, Tusker finds that the truth may lie at the bottom of the sea, with only one way back to the surface.Depth Charge is an old school thriller in the tradition of Fleming, Maclean, and Cussler, with an eye for detail, cunning villains, and narrow escapes. The story is full of wartime secrets, the intersection of religion and politics, and the arcane world of deep technical diving. It takes readers from the smoky halls of 1940s London to the volatile, seductive heat of Sri Lanka and sixty fathoms under the Indian Ocean. Try not to hold your breath.

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing ...and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.
