

## *Titan Transmission Service*

This noir fantasy thriller from a debut author introduces the gritty town of Titanshade, where danger lurks around every corner. "Take a little Mickey Spillane, some Dashiell Hammet, a bit of Raymond Chandler, and mix it with Phillip K. Dick's *Blade Runner*; add a taste of CJ Box, and Craig Johnson, and you've got a masterpiece of a first novel." —W. Michael Gear, *New York Times* bestselling author

Carter's a homicide cop in Titanshade, an oil boomtown where 8-tracks are state of the art, disco rules the radio, and all the best sorcerers wear designer labels. It's also a metropolis teetering on the edge of disaster. As its oil reserves run dry, the city's future hangs on a possible investment from the reclusive amphibians known as Squibs. But now negotiations have been derailed by the horrific murder of a Squib diplomat. The pressure's never been higher to make a quick arrest, even as Carter's investigation leads him into conflict with the city's elite. Undermined by corrupt coworkers and falsified evidence, and with a suspect list that includes power-hungry politicians, oil magnates, and mad scientists, Carter must find the killer before the investigation turns into a witch-hunt and those closest to him pay the ultimate price on the filthy streets of Titanshade.

The thorough analyses presented in the book provide the reader with a good overview of the deregulation process in the respective industries. . . Competition Policy and Merger Analysis in Deregulated and Newly Competitive Industries is a valuable resource for researchers of law, economics, and political science. . . Volker Soyez, *European Competition Law Review*

This comprehensive book contains case studies on the evolution of competition policy, with an emphasis on merger

policy, for seven major US industries that have experienced substantial deregulation in the past forty years: electricity, natural gas, telecommunications, railroads, airlines, hospitals and banking. Also included is a comparison of the EU's experience in attempting to bring about competition in the energy, finance, and airline industries. The contributors to the volume, each a recognized expert on the industry examined, explore the positive and negative implications of the substitution of market-oriented processes for historic patterns of command and control regulation. The chapters reveal clear similarities in the economic, legal and public policy issues that have arisen following deregulation of these economic sectors. Together they provide a good basis to discern the consistency of the problems and the relative success of differing responses to these issues over a range of industries going through similar transformation. While taking a basically positive view of the movement away from direct regulation, the contributors identify a number of continuing problems with achieving workable competition in these industries. The thorough analyses presented here will be of great value to law, economics, and political science researchers interested in deregulation, economic consultants advising government agencies or private parties, attorneys who focus on deregulated industries, policy planners at the agencies overseeing these industries, and students in advanced seminars on economic regulation.

***The five-volume set LNCS 9155-9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications, ICCSA 2015, held in Banff, AB, Canada, in June 2015. The 232 revised full papers presented in 22 workshops and a general track were carefully***

reviewed and selected from 780 initial submissions for inclusion in this volume. They cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security. Titan is practically a planet in its own right, with a diameter similar to that of Mercury, methane rainstorms, organic soot and ethane seas. All of the most detailed knowledge on the moon's geology, volcanology, meteorology, marine sciences and chemistry are gathered together here to paint a factually accurate hypothetical future of early human colonization on this strange world. The views from Titan's Mayda Outpost are spectacular, but all is not well at the moon's remote science base. On the shore of a methane sea beneath glowering skies, atmospheric researcher Abigail Marco finds herself in the middle of murder, piracy and colleagues who seem to be seeing sea monsters and dead people from the past. On the Shores of Titan's Farthest Sea provides thrills, excitement and mystery – couched in the latest science – on one of the Solar System's most bizarre worlds, Saturn's huge moon Titan. "This riveting story, set against a plausibly well integrated interplanetary space, carries us along with its bright and interesting characters. We feel absolutely transported to a hauntingly beautiful and alien Titan through Carroll's masterful weaving of art and science." – Jani Radebaugh, Professor of Planetary Sciences, Titan

**dune expert, BYU "It's a fun read! Really makes Titan come alive, literally..." – Astrophysicist and author Ralph Lorenz "Michael Carroll's new novel "On the Shores of Titan's Farthest Sea" (Springer) is a gripping, good-vs-evil tale that sparkles with imagination. It's set on the shores of Kraken Mare, the vast methane sea found high in the northern latitudes of Saturn's moon, Titan, in a future when humanity has spread throughout the solar system. The villains are wicked, the heroes are scientists (Thanks, Mike!), the story is convincing, the dialogue snappy, and the scenery is right out of our catalog of findings on this cold, hazy and alien world. If you fancy skipping forward 250 years and checking out how humankind might be navigating the very geography and landforms we have uncovered in our years touring Saturn, this book is for you!" --Carolyn Porco, leader of the Cassini Imaging Science team and the Director of the Cassini Imaging Central Laboratory for Operations (CICLOPS) at the Space Science Institute in Boulder, Colorado**

***Independence comes at a high cost. When Malcolm Graves finds himself in the clutches of the Titanborn, his plan to take Kale Trass down hits a wall. With the only family he has left threatened, he's forced back into the service of another employer, only this time it's not a corporation giving the orders. The future of the solar system hangs in the balance as Malcolm becomes the personal Collector for the Children of Titan. The loss of a close friend has Kale rattled as the second stage in his plan to completely sever from Earth begins. Impossible missions, ruthless enemies, traitors in his midst--it will take everything in Kale's power to keep the fight going. Maybe enough to break him... if he doesn't break Sol first. Will Titan finally gain its independence? Or has all the death and destruction been for nothing?***
