

Titirca Ingrijiri Speciale

Provides expert, state-of-the-art insight into the currentprogress of viral and non-viral gene therapy Translational medicine has opened the gateway to the era ofpersonalized or precision medicine. No longer a one-size-fits-allapproach, the treatment of cancer is now based on an understandingof underlying biologic mechanisms and is increasingly beingtailored to the molecular specificity of a tumor. This book provides a comprehensive overview of the pertinentmolecular discoveries in the cancer field and explains how theseare being used for gene-based cancer therapies. Designed as avolume in the Translational Oncology book series, Cancer GeneTherapy by Viral and Non-viral Vectors deals with the practiceof gene-therapy, with reference to vectors for gene expression andgene transfer, as well as viral therapy. It covers the history andcurrent and future applications of gene transfer in cancer, andprovides expert insight on the progress of viral and non-viral genetherapy with regard to delivery system, vector design, potentialtherapeutic genes, and principles and regulations for cancer gene therapy. Presented in three parts, Cancer Gene Therapy by Viral andNon-viral Vectors covers: Delivery Systems • Translational Cancer Research: Gene Therapy by Viraland Non-viral Vectors • Retroviruses for Cancer Therapy • DNA Plasmids for Non-viral Gene Therapy ofCancer • Cancer Therapy with RNAi delivered by Non-viralMembrane/Core Nanoparticles Targeted Expression • Cancer Gene Therapy by Tissue-specific andCancer-targeting Promptors • MicroRNAs as Drugs and Drug Targets in CancerPrinciples of Clinical Trials in Gene Therapy • Regulatory issues for Manufacturers of Viral Vectorsand Vector-transduced Cells for Phase I/II Trials • US Regulations Governing Clinical Trials in GeneTherapy • Remaining Obstacles to the Success of Cancer GeneTherapy Focusing on speeding the process in clinical cancer care bybringing therapies as quickly as possible from bench to bedside,Cancer Gene Therapy by Viral and Non-viral Vectors is absolutely vital book for physicians, clinicians, researchers, andstudents involved in this area of medicine.

Since Dr. Brizendine wrote The Female Brain ten years ago, the response has been overwhelming. This New York Times bestseller has been translated into more than thirty languages, has sold nearly a million copies between editions, and has most recently inspired a romantic comedy starring Whitney Cummings and Sofia Vergara. And its profound scientific understanding of the nature and experience of the female brain continues to guide women as they pass through life stages, to help men better understand the girls and women in their lives, and to illuminate the delicate emotional machinery of a love relationship. Why are women more verbal than men? Why do women remember details of fights that men can't remember at all? Why do women tend to form deeper bonds with their female friends than men do with their male counterparts? These and other questions have stumped both sexes throughout the ages. Now, pioneering neuropsychiatrist Louann Brizendine, M.D., brings together the latest findings to show how the unique structure of the female brain determines how women think, what they value, how they communicate, and who they love. While doing research as a medical student at Yale and then as a resident and faculty member at Harvard, Louann Brizendine discovered that almost all of the clinical data in existence on neurology, psychology, and neurobiology focused exclusively on males. In response to the overwhelming need for information on the female mind, Brizendine established the first clinic in the country to study and treat women's brain function. In The Female Brain, Dr. Brizendine distills all her findings and the latest information from the scientific community in a highly accessible book that educates women about their unique brain/body/behavior. The result: women will come away from this book knowing that they have a lean, mean, communicating machine. Men will develop a serious case of brain envy.

"Functional neuroanatomy of the brain" gathers an immense material from different sources (books, papers, works of great neuroanatomists mentioned in the references etc.) and makes a precise and complete synthesis of the structure and functions of the brain, the most complex system in the universe. The book starts with the history of neuroscience, data and ideas referring to soul, mind and brain, the way they have been imagined and conceived by healers, witches and philosophers since old times. On the other hand the book aims at revealing some basic and recent data about mind and brain, making them accessible to students, doctors, psychologists, biologists and all those interested in this vast topic and research field - the brain - who are studying by themselves. The first volume of "Functional neuroanatomy of the brain" has eight chapters, as it follows: HISTORY OF THE BRAIN AND MIND, INTRODUCTION IN THE NERVOUS SYSTEM, MEDULLA OBLONGATA (OR BULB), PONS, MIDBRAIN, RETICULAR FORMATION, CEREBELLUM and DIENCEPHALON. The second part presents in nine chapters of detailed information: THE BASAL GANGLIA, LIMBIC LOBE AND LIMBIC SYSTEM, HIPPOCAMPAL FORMATION, AMYGDALA, OLFACTORY SYSTEM, GUSTATORY SYSTEM, FRONTAL LOBES, PARIETAL LOBE and TEMPORAL LOBES. At least the third part gathers essential information split in seven chapters: OCCIPITAL LOBE, WHITE MATTER OF CEREBRAL HEMISPHERE, CORPUS CALLOSUM, CEREBRAL CORTEX, VENTRICULAR SYSTEM AND MENINGES, CEREBRAL ASYMMETRY in nonhumans, THE NEURAL BASIS OF CONSCIOUSNESS. Even if this book is not written by a neuroanatomist, but it represents a textbook assembled by a genius of neurosurgery, with a huge professional experience, Academician Professor Doctor Leon Danaila, who describes himself some reasons of this special work: "As a neurosurgeon who has performed over 40 000 surgeries on the central and peripheral nervous system during my 50 years of continuous neurosurgical activity, I can comprehend the structural and functional complexity of the brain. In order not to disturb the highly functional areas of the central nervous system, I was forced to get familiar with the details of the brain map, which, taking into consideration my experience, varies from individual to individual, and I can say that each person, healthy or sick, is unique. I have been an assiduous reader of many books and papers in order to have a better documentation in this area, but I could not find any manual or book to contain relatively complete and up-to-date information on the anatomy and physiology of the brain. The existing neuroanatomy textbooks are not thorough enough, in my opinion, as they do not explain the morphological and neurophysiological complexity of white and grey matter. To keep up with the vast literature in this research field, and with the investigations of the brain as a whole has been for me a real challenge or better said an impossible task, an unreachable goal. The clinical information has been of great help in understanding the basic scientific concepts and the way in which the central nervous system, especially the brain, operates and interacts in the presence of various internal and external harmful factors, or in abnormal, pathological situations. Publishing this book concurs with an enormous explosion of knowledge about the morphology and physiology of the central nervous system and its vast reciprocal connections and plasticity. Consequently, I found it hard to keep up with the multitude of works published during the past ten years about functional neuroimaging, neuropharmacology, computational modulation, rehabilitation methods, theories of thinking, of memory, attention, frontal functions, language etc., as well as the structures and the immense number of neural connections and columns that build them. I keep the doors open to corrections, additions and novelty and, why not, to reinterpretation. It's me who will do it or maybe others will do it better than I did."

The Complete Collected Works of This Revolutionary Healing Art by the Originator of the System: Volume One

Fully updated to meet the demands of the 21st-century surgeon, Plastic Surgery provides you with all the most current knowledge and techniques across your entire field, allowing you to offer every patient the best possible outcome. Edited by Drs. Mathes and Hentz in its last edition, this six-volume plastic surgery reference now features new expert leadership, a new organization, new online features, and a vast collection of new information - delivering all the state-of-the-art know-how you need to overcome any challenge you may face. Renowned authorities provide evidence-based guidance to help you make the best clinical decisions, get the best results from each procedure, avoid complications, and exceed your patients' expectations. Consult this title on your favorite e-reader, conduct rapid searches, and adjust font sizes for optimal readability. Compatible with Kindle®, nook®, and other popular devices. Apply the very latest advances in every area of plastic surgery and ensure optimal outcomes with evidence-based advice from a diverse collection of world-leading authorities. Master the latest on stem cell therapy, tissue engineering, and inductive therapies • aesthetic surgical techniques and nonsurgical treatments • conjoined twin separation and other craniofacial surgery advances • microsurgical lymphatic reconstruction, super microsurgery, and sternal fixation • autologous lipofilling of the breast • nerve transfers in hand surgery, hand allotransplantation, and functional prosthetics • and much, much more. Easily find the answers you need with a new organization that features separate volumes covering Principles • Aesthetic • Craniofacial, Head and Neck Surgery • Lower Extremity, Trunk and Burns • Breast • Hand and Upper Extremity, plus a more templated, user-friendly, high-yield presentation. Visualize procedures more clearly through an abundance of completely redrawn full-color illustrations and new color clinical photographs. Access the complete, fully searchable contents of each volume online, download all the tables and figures, view 160 procedural videos, and take advantage of additional content and images at www.expertconsult.com!

"... this book was written from start to finish by one extremely dedicated and erudite individual. The author has done an excellent job of covering the many topics that fall under the umbrella of computational biology for vaccine design, demonstrating an admirable command of subject matter in fields as disparate as object-oriented databases and regulation of T cell response. Simply put, it has just the right breadth and depth, and it reads well. In fact, readability is one of its virtues—making the book enticing and useful, all at once..." Human Vaccines, 2010 "... This book has several strong points. Although there are many textbooks that deal with vaccinology, few attempts have been made to bring together descriptions of vaccines in history, basic bioinformatics, various computational solutions and challenges in vaccinology, detailed experimental methodologies, and cutting-edge technologies... This book may well serve as a first line of reference for all biologists and computer scientists..." Virology Journal, 2009 Vaccines have probably saved more lives and reduced suffering in a greater number of people than any other medical intervention in human history, succeeding in eradicating smallpox and significantly reducing the mortality and incidence of other diseases. However, with the emergence of diseases such as SARS and the threat of biological warfare, vaccination has once again become a topic of major interest in public health. Vaccinology now has at its disposal an array of post-genomic approaches of great power. None has a more persuasive potential impact than the application of computational informatics to vaccine discovery; the recent expansion in genome data and the parallel increase in cheap computing power have placed the bioinformatic exploration of pathogen genomes centre stage for vaccine researchers. This is the first book to address the area of bioinformatics as applied to rational vaccine design, discussing the ways in which bioinformatics can contribute to improved vaccine development by introducing the subject of harnessing the mathematical and computing power inherent in bioinformatics to the study of vaccinology putting it into a historical and societal context, and exploring the scope of its methods and applications. Bioinformatics for Vaccinology is a one-stop introduction to computational vaccinology. It will be of particular interest to bioinformaticians with an interest in immunology, as well as to immunologists, and other biologists who need to understand how advances in theoretical and computational immunobiology can transform their working practices.

A practical guide to preventing and treating the toxic assault on our bodies • Shows how the practices of periodic detox and “rational retox” can counteract the toxic nature of our modern lifestyles, diets, and environment • Provides ancient Chinese methods and remedies that help the body repair itself • Includes detoxification techniques, formulas, and exercises that work within 10 days Despite the wonders of modern medicine, the state of human health throughout the world is eroding at an alarming rate. The long-term accumulation of toxins and acid waste in our bodies—both from the chemically contaminated air we breathe and water we drink as well as the toxins we ingest in the form of low quality food, preservatives, and additives—damages our organs, corrodes our joints and arteries, enervates our nervous system, and inhibits our immune system. Chronic pain and fatigue, hypertension and heart failure, cancer, diabetes, arthritis, indigestion, insomnia, and even acne, are all caused by the long-term accumulation of toxins in our bodies. In The Tao of Detox Daniel Reid combines traditional Eastern practices and the latest of modern Western thinking to offer detoxification methods that can repair in as little as seven to ten days much of the long-term damage done. He provides breathing exercises, massage techniques, and soft exercises such as yoga and tai chi that help the body to heal itself. He also explains the importance of “rational retoxification,” which allows the careful reintroduction of less healthy substances, and offers ways to counteract those toxins we can’t—or don’t want to—avoid, including alcohol and tobacco. Reid explains that, just as we care for our cars

Detailed, full-color anatomical illustrations have drawn over a million readers to this popular anatomy series. Now Running Anatomy is the ideal resource for fitness runners and competitive runners hoping to improve performance by increasing muscular strength and optimizing the efficiency of the running motion, while minimizing the risk for injury. Anatomical illustrations highlight the muscles in action during effective running exercises and help readers assess and rehab running injuries like plantar fasciitis and ITB syndrome. Original.

Book tells of the discovery and development of a new mineral that cured many people of malaria in the jungle of S. America. Later more than 75,000 cases of malaria were treated successfully in Africa. At the same time more than 388 cases of AIDS were successfully treated, and clinical trials were run with 100% success in the country of Malawi. Since that time thousands of people have successfully used the solution that is described in the book. People have recovered from Hepatitis C, from diabetes, from cancer, TB, colds, flu, lupus, and many other diseases. More than 100,000 people in America have been treated with more than 11,000 bottles of the solution being sold each month as of March 2008. This miracle mineral solution creates an internal environment boosting the immune system so that disease borne pathogens cannot survive.

These volumes have long been essential reading for many practitioners of the healing arts, especially those who employ manual techniques or energy-balancing procedures.Polarity Therapy can be used in psychotherapy, chiropractic therapy, osteopathy, many types of massage, physical therapy, dance, yoga, and other forms of bodywork.Volume I includes the following major works by Dr. Stone and is reproduced from the original first editions: Energy: The Vital Polarity in the Healing Art, The Wireless Anatomy of Man, and Polarity Therapy.

Bioinformatics for Vaccinology

This book offers a much-needed introduction to the dynamics of the communication exchange between providers and patients in the health-care environment, explaining how health communication theory and research can help us better understand these complex interactions, and provide strategies for improving patient and provider communication.

You're about to discover the crucial information regarding LSD. It can be overwhelming if you are trying to find honest, factual information because of all the random opinions out there on the internet. You also have to be careful about the misinformation that is coming from online sources, especially those with financial incentives. This book serves to be an unbiased guide so that you can understand all of the important information before you invest money or time into trying "Acid." This book goes into the origins and history of Lysergic Acid Diethylamide, how LSD works, the similarities and differences when compared to other similar "drugs," the positive and negative effects of consuming Acid, as well as the legality and dangers involved. By investing in this book, you can get a grasp of the topic so that you can make a solid decision about what you put into your body, or even help other people in your life.

A fundamental and respected resource book in critical care, The ICU Book, Fourth Edition, continues to provide the current and practical guidance that have made it the best-selling text in critical care. The text addresses both the medical and surgical aspects of critical care, delivering the guidance needed to ensure sound, safe, and effective treatment for patients in intensive care?regardless of the specialty focus of the unit. This version does not include the updates and other functionality included in the tablet version that accompanies the print edition.

Why is the sea salty? How far away is space? Why can't I tickle myself? Why can't we live forever? Children ask the most interesting and challenging questions. But how are we supposed to answer them...? At last! Expert answers to those big questions children ask, with help from: Sir David Attenborough Heston Blumenthal Kate Humble Alain de Botton Philip Pullman Dr Richard Dawkins

Bear Grylls Dame Jacqueline Wilson Jarvis Cocker Dame Kelly Holmes Noam Chomsky Jessica Ennis Darren Brown Miranda Hart Tracey Emin Harry Hill A C Grayling Dr Christian Jessen and many more!

Dr. Agatha Thrash has spent her career helping people improve their wellbeing thanks to her practical and natural approach to health. A board specialist in pathology, Dr. Thrash has written numerous books about the benefits of charcoal, hydrotherapy, and other home remedies and natural therapies. "Nature's Healing Practices" is an extensive volume that contains a wealth of information drawn from Dr. Thrash's books and her and her associates' years of clinical experience. The book is divided into six sections: Conditions and Diseases, Home Emergencies, Natural Remedies, Herbal Remedies, Dietary Information, Supplemental Information. The first section-Conditions and Diseases-makes up the largest portion of the book and serves as a reference guide for a host of ailments from allergies, Alzheimer's diseases, cancer, and cataracts to headaches, skin diseases, thyroid issues, and women's conditions. Listed in alphabetical order, the various conditions feature case studies, background information, causes, and treatments, including herbal, hydrotherapy, exercise, and dietary suggestions. The rest of the sections provide valuable information how to treat bee stings and other minor home emergencies, how to administer hydrotherapy treatments, what herbs treat what ailments, and what foods to avoid and what foods to eat based on the condition you are battling.

This unique and unashamedly DIY book follows the runaway success of Banksy Locations and Tours Vol.1 by rounding up the rest of Banksy's UK graffiti from the last five years. It includes over 100 different locations and 200 color photographs of Banksy's street art; information, random facts, and idle chit-chat on each location; a full walking tour of his remaining work in Bristol, England; and snippets of graffiti by several other artists. Visit the locations in-person, or get your slippers on and settle back for an open-top bus ride though some of Banksy's best public work.

This expansive guide will equip you with complete, clinically oriented and up-to-date information on the neuroanatomy of the brain. The Cells of the Brain: A Review Book is an authoritative and extensive text and review that completely covers the structure of the entire neuroanatomy of the brain. In this up-to-date text, a comprehensive look into the molecular biology of the brain cells and how they function together. In this text, Dr. Leon Danaila explains in lucid language, the framework of the brain from the cellular level and gradually builds up to more complex concepts in a way the student or reader can follow along. In the first chapter, Dr. Danaila provides the nuts-and-bolts essential to understanding how the brain works, as well as selected mental illnesses and their probable causes. Here's a snippet of what's covered in this comprehensive guide: History and general characteristics of mammalian cells Cellular components and their functions Cells and neurons of the brain The molecular motors in the nervous system The oscillating brain and the neural fields The Ependymal and neuroglial cells ...and much more. Incredibly detailed and expansive, The Cells of the Brain: A Review Book has something in its pages for everyone, students and practitioners alike, no matter where you are on the knowledge spectrum in the field of neuroanatomy. Scroll up and click the button to buy now!

Did you know that blueberries can help you cope with the after-effects of trauma? That salami can cause depression, or that boosting Vitamin D intake can help treat anxiety? When it comes to diet, most people's concerns involve weight loss, fitness, cardiac health, and longevity. But what we eat affects more than our bodies; it also affects our brains. And recent studies have shown that diet can have a profound impact on mental health conditions ranging from ADHD to depression, anxiety, sleep disorders, OCD, dementia and beyond. Dr. Uma Naidoo is a board-certified psychiatrist, nutrition specialist, and professionally trained chef. In The Food-Mood Connection, she draws on cutting-edge research to explain the many ways in which food contributes to our mental health, and shows how a sound diet can help treat and prevent a wide range of psychological and cognitive health issues. Packed with fascinating science, actionable nutritional recommendations, and delicious, brain-healthy recipes, The Food-Mood Connection is the go-to guide to optimizing your mental health with food.

Pocket Emergency Medicine, Fourth Edition, provides accurate, actionable, and easily accessible information for clinicians on the front lines of emergency care. Designed to be used at the bedside, it's an outstanding go-to source for the essential information you need to care for patients in life-threatening situations. This volume in the popular Pocket Notebook series provides a concise and focused review of the entire field of emergency medicine — from history and physical exam to differential diagnosis testing to therapeutics to disposition — all in one easy-to-navigate looseleaf notebook.

The New York Times bestselling author of Eat to Live and Super Immunity and one of the country's leading experts on preventive medicine offers a scientifically proven, practical program to prevent and reverse diabetes—without drugs. At last, a breakthrough program to combat the rising diabetes epidemic and help millions of diabetics, as well as those suffering with high blood pressure and heart disease. Joel Fuhrman, M.D. Research director of the Nutritional Research Foundation, shows you how to live a long, healthy, and happy life—disease free. He offers a complete health transformation, starting with a diet with a high nutrient-per-calorie ratio that can be adapted for individual needs. Dr. Fuhrman makes clear that we don't have to “control” diabetes. Patients can choose to follow better nutritional guidelines that will control it for them, even before they have lost excess weight. The end result is a medical breakthrough—a comprehensive reversal of the disease.

Practical health and wellness strategies for real life from Lauren Imparato, creator of the I.AM.YOU. lifestyle brand and yoga studio. Rest to rage. Meditate to work. Cleanse to get dirty. Enough preaching about self-deprivation. No more striving for bodily purity. Who has the patience—or the time!—for strict dietary restrictions and hours of meditation? Let's get real. These tactics just don't work—at least not for long. But that doesn't mean health and happiness are unobtainable. Most often you just need an anxiety buster you can do while running down the street. Or a yoga pose you can do at your desk. Or a way to debloat what feels like an alien baby in your abdomen. Retox isn't about changing who you are or denying life's pleasures. It's about tailoring sensible, scientifically-based health practices to the life you already live. It's about working hard, playing harder, and renewing your balance and energy so you can do it all again. In Retox, health expert Lauren Imparato strips yoga down to its anatomical principles, offering practical tips for fast relief. Then, drawing from a variety of disciplines—from psychology to nutrition to Tibetan philosophy—she designs no-nonsense strategies and delicious recipes to combat the most common challenges of modern life: • Stress and anxiety • Low energy • Back pain and headaches • Hangovers • PMS • Sleep Deprivation • And much more...

Dr. Shinya again changes our view of what is possible in his groundbreaking new book, the Rejuvenation Enzyme. Here Dr. Shinya turns his visionary genius to solving the problem of aging cells. His conclusions will amaze you with their simplicity and insight as he shows you how you can create your own rejuvenation plan using techniques such as the Little Fast, detox massage, coffee enema and Kangen water. In The Rejuvenation Enzyme you will learn: How rejuvenation enzymes transform zombie cells into healthy cells. How you can restore energy by clearing ôgarbageô from your cells Why purple food improves your memory How drinking Kangen Water supports you health and energy Why turmeric may prevent Alzheimer's Disease

Dr. Hiromi Shinya, medical pioneer and inventor, developed the now standard technique of non-invasive colonoscopic surgery. In his more than 50 years of practice he was a professor of surgery at Albert Einstein College of Medicine and Head of the Endoscopic Center of Beth Israel Hospital in New York as well as an adviser for Maeda Hospital and Hanzonm

Gastrointestinal Clinic in Japan. He was also vice-chairman of the Japanese Medical Association in the USA. Book jacket.
