The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Completely revised and updated, this broad yet comprehensive edition contains twenty-nine chapters on nursing issues and clinical practice. Topics cover practice and process, documentation, legal issues, health promotion, physical assessment, I.V. therapy, surgical care, and more. "The International Council of Nurses commissioned her to write an essay entitled Basic Principles of Nursing Care (Geneva, 1960) for the use of nurses who had neither access to technology nor the medical care required to establish disease diagnoses. The ICN publication is available in 29 languages and is in current use throughout the world. Noting the absence of an organized literature upon which to base clinical studies, she embarked on a project to annotate nursing literature. The four volume Nursing Studies Index was completed in 1972 and was hailed as her most important contribution to nursing science. Miss Henderson started her most important writing project at the age of 75 when she began the sixth edition of the Principles and Practice of Nursing text. Over the next five years, she led Gladys Nite and seventeen contributors to synthesize the professional literature she had just completed indexing. With the wisdom gleaned from over fifty years in the nursing profession and the opportunity to review the writings of all principle authors who wrote in English, she fashioned a work that both thoroughly criticized health care and offered nurses an opportunity to correct the shortcomings. The book operates on two levels; individual and global. She argued that health care will be reformed by the individual nurses who will enable their patients to be independent in health care matters when patients are both educated and encouraged to care for themselves. She took this philosophy to new heights by eliminating medical jargon from the text and declaring it is a reference for those who want to guard their own or their family's health or take care of a sick relative or friend."--AAHN.

This book gathers state-of-the-art research in computational engineering and bioengineering to facilitate knowledge exchange between various scientific communities. Computational engineering (CE) is a relatively new discipline that addresses the development and application of computational models and simulations often coupled with high-performance computing to solve complex physical problems arising in engineering analysis and design in the context of natural phenomena. Bioengineering (BE) is an important aspect of computational biology, which aims to develop and use efficient algorithms, data structures, and visualization and communication tools to model biological systems. Today, engineering approaches are essential for biologists, enabling them to analyse complex physiological processes, as well as for the pharmaceutical industry to support drug discovery and development programmes.

Manual of Nursing Procedures and Practice will guide nurses in a variety of settings to provide expertise and efficient patient care. It will also be an iconic resource in coaching and mentoring the novice and practicing nurses to build their competence and confidence.

Health and medicine cannot be understood without considering the role of nurses, both as professionals and as working women. In India, unlike other countries, nurses have suffered an exceptional degree of neglect at the hands of state, a situation that has been detrimental to the quality of both rural and urban health care. Charting the history of the development of nursing in India over 100 years, Indian Sisters examines the reasons why nurses have so consistently been sidelined and excluded from health care governance and policymaking. The book challenges the routine suggestion that nursing's poor status is mainly attributable to socio-cultural factors, such as caste, limitations on female mobility and social taboos. It argues instead that many of its problems are due to an under-achieved relationship between a patriarchal state on the one hand, and weak professional nursing organisations shaped by their colonial roots on the other. It also explores how the recent phenomenon of large-scale emigration of nurses to the West (leading to better pay, working conditions and career prospects) has transformed the profession, lifting its status dramatically. At the same time, it raises questions about the implications of emigration for the fate of health care system in India. An important contribution to the growing academic genre of nursing history, the book is essential reading for scholars and students of health care, the history of medicine, gender and women's studies, sociology, and migration studies. It will also be useful to policymakers and health professionals.
