Power meters have become essential tools for competitive cyclists and triathletes. No training tool can unlock as much speed and endurance as a power meter--for those who understand how to interpret their data. A power meter displays and records exactly how much energy a cyclist expends, which lends unprecedented insight into that rider's abilities and fitness. With the proper baseline data, a cyclist can use a power meter to determine race strategy, pacing, and tactics. Training and Racing with a Power Meter makes it possible to exploit the incredible usefulness of the power meter by explaining how to profile strengths and weaknesses, measure fitness and fatigue, optimize workouts, time race readiness, and race using power. This new edition: Enables athletes to predict future performance and time peak form Introduces fatigue profiling, a new testing method to pinpoint weaknesses Includes two training plans to raise functional threshold power and time peaks for race day Offers 75 power-based workouts tuned for specific training goals This updated edition also includes new case studies, a full chapter on triathlon training and racing, and improved 2-color charts and tables throughout. *"One of the most interesting and useful books ever written on networking."--Adam Grant Social Chemistry will utterly transform the way you think about "networking." Understanding the contours of your social network can dramatically enhance personal relationships, work life, and even your global impact. Are you an Expansionist, a Broker, or a Convener? The answer matters more than you think. . . . Yale professor Marissa King shows how anyone can build more meaningful and productive relationships based on insights from neuroscience, psychology, and network analytics. Conventional wisdom says it's the size of your network that matters, but social science research has proven there is more to it. King explains that the quality and structure of our relationships has the greatest impact on our personal and professional lives. As she illustrates, there are three basic types of networks, so readers can see the role they are already playing: Expansionist, Broker, or Convener. This network decoder enables readers to own their network style and modify it for better alignment with their life plans and values. High-quality connections in your social network strongly predict cognitive functioning, emotional resilience, and satisfaction at work. A well-structured network is likely to boost the quality of your ideas, as well as your pay. Beyond the office, social connections are the lifeline of our health and happiness. The compiled results from dozens of previous studies found that our social relationships have an effect on our likelihood of dying prematurely--equivalent to obesity or smoking. Rich stories of Expansionists like Vernon Jordan, Brokers like Yo-Yo Ma, and Conveners like Anna Witour, as well as personal experiences from King's own world of connections, inform this warm, engaging, revelatory investigation into some of the most consequential decisions we can make about the trajectory of our lives.*

The story of the rise of modern navigation technology, from radio location to GPS--and the consequent decline of privacy What does it mean to never get lost? You Are Here examines the rise of our technologically aided era of navigational omniscience--or how we came to know exactly where we are at all times. In a sweeping history of the development of location technology in the past century, Bray shows how radio signals created to carry telegraph messages were transformed into invisible beacons to guide ships and how a set of rapidly-spinning wheels steered submarines beneath the polar icecap. But while most of these technologies were developed for and by the military, they are now ubiquitous in our everyday lives. Our phones are now smart enough to pinpoint our presence to within a few feet--and nosy enough to share that information with governments and corporations. Filled with tales of scientists and astronauts, inventors and entrepreneurs, You Are Here tells the story of how humankind ingeniously solved one of its oldest and toughest problems--only to herald a new era in which it's impossible to hide.

In June 2019, the Committee on the Judiciary initiated a bipartisan investigation into the state of competition online, spearheaded by the Subcommittee on Antitrust, Commercial and Administrative Law. As part of a top-to-bottom review of the market, the Subcommittee examined the dominance of Amazon, Apple, Facebook, and Google, and their business practices to determine how their poweraffects our economy and our democracy. Additionally, the Subcommittee performed a review of existing antitrust laws, competition policies, and current enforcement levels to assess whether they areadequate to address market power and anticompetitive conduct in digital markets. Over the course of our investigation, we collected extensive evidence from these companies aswell as from third parties--totaling nearly 1.3 million documents. We held seven hearings to review the effects of market power online--including on the free and diverse press, innovation, and privacy--and a final hearing to examine potential solutions to concerns identified during the investigation and to inform this Report's recommendations. A year after initiating the investigation, we received testimony from the Chief ExecutiveOfficers of the investigated companies: Jeff Bezos, Tim Cook, Mark Zuckerberg, and Sundar Pichai. For nearly six hours, we pressed for answers about their business practices, including about evidence concerning the extent to which they have exploited, entrenched, and expanded their power over digitalmarkets in anticompetitive and abusive ways. Their answers were often evasive and non-responsive, raising fresh questions about whether they believe they are beyond the reach of democratic oversight. Although these four corporations differ in important ways, studying their business practices hasrevealed common problems

Within this framework, cases are reviewed in summary form, accompanied by useful analysis and commentary. The 7th edition includes recent judgments from the European Court of Justice on the scope of object and effects based analysis (including Generics and Budapest Bank), as well as those on abuse of dominance. It examines developments in parallel trade, online sales restrictions, advertising bans, enforcement powers and procedure. Expanding its coverage of merger decisions, it explores non-collusive oligopoly (including CK Telecoms) and the treatment of innovation and data under the EU Merger Regulation. At over 90,000 words, this is the most comprehensive fan guide yet published to the 2012-2013 season of Doctor Who. After the first part of the season provided an emotional ending to the Doctor's travels with his friends Amy and Rory, Steven Moffat presented an innovative and intriguing new mystery, as the Doctor puzzled over the "woman twice dead" that is Clara Oswald, who had the most spectacular introduction(s) of any companion. This series was the most demanding yet for Moffat; no other Doctor Who showrunner had previously faced an assignment like writing a series finale, an anniversary story, and a combined Christmas Special/Doctor finale in quick succession. We are with Moffat every step of the way as he rises to this unique challenge. The format of this book is the same as our previous Doctor Who guides. Steven Cooper has written excellent detailed analyses of each episode, which Slant Magazine published online in their House Next Door blog soon after each episode was broadcast. In this way, Steven's reviews provide an invaluable record of how a long-standing fan reacted to each twist of the plot as it occurred. House Next Door published Steven's 2013 episode reviews in abridged form, he then expanded upon his analyses, so this book contains far more of his insights than those published online. Kevin Mahoney then follows Steven's analyses with his reviews, which he wrote from the perspective of having watched the entire series. This enabled him to gauge exactly how Steven Moffat had put this season together, and to assess the success of his various hoodwinks and sleights of hand. In this series, Steven Moffat was just as ambitious as ever - perhaps too ambitious at times, when the scripting became uneven or the production team was not able to realize an episode as well as they might have done. Despite this, there were several episodes that rank among the best of the show's achievements, which we applaud in this celebration of Doctor Who's 50th Anniversary.
