*Ensure that your WAN can handle the latest technologies with this must-have strategy guide. If a Wide Area Network (WAN) isn't set up properly, it won't be able to meet the needs of the applications being used in the Local Area Network (LAN). And with the emergence of new technologies such as VPNs, multi-service networks, and the mobility of corporate users, the costs involved with running a WAN have changed dramatically. Written by an expert on WAN design, this book provides a comprehensive strategy for choosing the best technologies available for your WAN. It includes analysis of business requirements for WANs, end-user and service provider requirements, and the capabilities and tradeoffs of the available technologies. The book also covers the realities and limitations of QoS, security, multi-service networks, virtual networks, VPNs, multi-homing, roaming, and mobility. This volume is aimed at those who are concerned about Chinese medicine - how it works, what its current state is and, most important, how to make full use of it. The audience therefore includes clinicians who want to serve their patients better and patients who are eager to supplement their own conventional treatment. The authors of the book belong to three different fields, modern medicine, Chinese medicine and pharmacology. They provide information from their areas of expertise and concern, attempting to make it comprehensive for users. The approach is macroscopic and philosophical; readers convinced of the philosophy are to seek specific assistance.*

In a series of entertaining essays, geoscientist Jelle Zeilinga de Boer describes how early settlers discovered and exploited Connecticut's natural resources. Their successes as well as failures form the very basis of the state's history: Chatham's gold played a role in the acquisition of its Charter, and Middletown's lead helped the colony gain its freedom during the Revolution. Fertile soils in the Central Valley fueled the state's development into an agricultural power house,

and iron ores discovered in the western highlands helped trigger its manufacturing eminence. The Statue of Liberty, a quintessential symbol of America, rests on Connecticut's Stony Creek granite. Geology not only shaped the state's physical landscape, but also provided an economic base and played a cultural role by inspiring folklore, paintings, and poems. Illuminated by 50 illustrations and 12 color plates, *Stories in Stone* describes the marvel of Connecticut's geologic diversity and also recounts the impact of past climates, earthquakes, and meteorites on the lives of the people who made Connecticut their home.

**The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge information. The book provides insights for advance research work in the area of image processing and biometrics.**

PROVEN STRATEGIES FOR APPLYING PROGRAM MANAGEMENT TECHNIQUES TO PUBLIC SECTOR PERFORMANCE

MANAGEMENT Government Program Management examines ongoing global reforms in public-sector program design and management and explains how to deliver public-sector programs in response to these reforms. A new, generic program management model--essential for government executives, program managers, and legislative leaders--is presented. The new model addresses various dysfunctional forces that are global in scale, that inhibit public programs from achieving their intended benefits and outcomes. This in-depth resource discusses reforms that fundamentally alter government agency structure, performance reporting and budgeting, composition, and roles and functions. The book also looks at targeted reforms affecting individual programs, covering concept, planning, design, delivery, cost control, and performance reporting. Best practices from both the public and private sectors are covered in this pioneering guide. Government Program Management Forces for change in government program management: impacts of the new public management theory Problems and issues in public program performance and benefits management Agency performance and program management developments in the United States Applying the standard for program management according to the Project Management Institute to public agencies and programs The program manager's office in the public sector Government workforce changes and implications for program management Public program leadership development Global models and benchmarks for program management: new public management concepts Models for future programs Case study: a digital health information system in the United States The special problem of networked and intergovernmental programs Recommendations for changing public program management structure, systems, and processes in the United States beginning with the president The crisis of unsustainability is, above all else, a crisis of governance. The transition to a more sustainable world will inevitably require radical changes in the actions of all governments, and it will call for significant changes to the lifestyles of individuals everywhere. Bringing together some of the world's most highly regarded experts on governance and sustainable development, this book examines these necessary processes and their consequences across a range of sectors, regions and other important areas of concern. It reveals that the governance of sustainable development is politically contested, and that it will continue to test existing governance systems to their limits. As an assessment of existing policy practices, it will be of great interest to all those who are preparing themselves - or their organisations - for the sustainability transition.

Here is a rhetorical treatment of Karl Barth's early theology. Although scholars have long noted the rhetorical power of Barth's work, considered volcanic and explosive, this book uses rhetoric to illuminate the peculiar nature of his prose. It displays a Barth whose prose is radically different and inseparable from his theological arguments. The author connects Barth's early theology to the Expressionism of the Weimar Republic and develops an original theory of figures of speech, relying on the philosophies of Paul Ricoeur and Hayden White, to delve more deeply into particular configurations of Barth's writings. Nietzsche's hyperbole and Kierkegaard's irony are examined as rhetorical precedents of Barth's style. The closing chapter surveys Barth's later, realistic theology and then suggests ways in which his earlier tropes, especially the figure of the self and self-negation, can serve to enable theology to speak today.

***We live in a society as dominated by food preference as by sexual preference, as obsessed with eating too much as with eating too little. In this accessible, cross-disciplinary text, David Goodman and Michael Redclift look at the development of the modern food system, integrating different bodies of knowledge and debate concerning food, agriculture, the environment and the household. They link changes in our diet and concern with the environment to many of the problems afflicting developing countries: food shortages, poor nutrition and wholesale environmental destruction.***

***A true adventure story and the go-to guide for "picking" American treasures from anyone's backyard, straight from the stars of History's American Pickers In these pages, professional treasure hunters Mike Wolfe and Frank Fritz chronicle their road trips across the American countryside in search of "rusty gold" to buy and sell among the picking world's one-of-a-kind characters. Whether you are a fan of the show or just like finding hidden riches, you will love seeing what Wolfe and Fritz dig up and enjoy meeting the devoted collectors, extreme stockpilers, and elite dealers who they encounter along the way.***

*Wolfe and Fritz do not deal in fine antiques. Their secondhand treasures are of the down-and-dirty and sometimes even bizarre variety, from old bicycles and vintage tools, to sun-bleached cars and handmade furniture, retired carnival games and unusual taxidermy. Assisted by Danielle Colby, who helps out at Antique Archaeology, Wolfe and Fritz buy on the cheap and then sell to dealers, art directors, interior designers, or anyone looking for a little bit of authentic Americana. The three now share their secrets to finding hidden gems, offering helpful hints that will show what average Americans can do to find the treasures that await them. From American Pickers Guide to Picking: Junk is Beautiful When we knock on a door, 90 percent of the time the things we find are junk. But we don't care about the odds; a picker never turns down an opportunity, no matter where it is. We've picked pickup trucks. We've picked flat beds. We've picked dumpsters. We even picked a Mercury Sable. We're looking for the unusual, the impossible, the funky, the different, the bizarre-things we have never seen before. And we'll go anywhere we have to go to find it. No location is off-limits to a hard-core picker. And there's plenty of things to be found at antique stores, thrift and consignment shops, flea markets, estate sales, and swap meets, and a lot of the tips in this book apply to finding treasures at these joints. But that's not really the kind of picking we do anymore. We look outside the box to find our junk—a word we use almost like a term of endearment: to us: junk is beautiful.*

Winner of the André Simon Food Book Award 2020 "Caroline Eden is an extraordinarily creative and gifted writer. Red Sands captures the sights, tastes and feel of Central Asia so well that when reading this book I was sometimes convinced I was there in person. A wonderful book from start to finish." Peter Frankopan, author of The Silk Roads\ "Caroline Eden, whose book Black Sea was showered with awards, is on the road again, this time travelling through the heart of Asia. It's not your usual cookbook, it's more a travel book with recipes, the recipes acting as postcards which she sends as she meets new characters, most of them involved with food... Eden travels quietly and lets you in on every encounter and every bite. A moving... as well as a fascinating read." Diana Henry, Telegraph "Red Sands follows in the footsteps of Caroline Eden's previous volume Black Sea. Both are pleasures to read, triangulating journalism, literary writing, and cookbookery. The recipes are part of the reporting, and Eden describes them as edible snapshots." Devra First, Boston Globe Red Sands, the follow-up to Caroline Eden's multi-award-winning Black Sea, is a reimagining of traditional travel writing using food as the jumping-off point to explore Central Asia. In a quest to better understand this vast heartland of Asia, Caroline navigates a course from the shores of the Caspian Sea to the sun-ripened orchards of the Fergana Valley. A book filled with human stories, forgotten histories and tales of adventure, Caroline is a reliable guide using food as her passport to enter lives, cities and landscapes rarely written about. Lit up by emblematic recipes, Red Sands is an utterly unique book, bringing in universal themes that relate to us all: hope, hunger, longing, love and the joys of eating well on the road.

Learning to argue and persuade in a highly competitive environment is only one aspect of life on a high-school debate team. Teenage debaters also participate in a distinct cultural world—complete with its own jargon and status system—in which they must negotiate complicated relationships with teammates, competitors, coaches, and parents as well as classmates outside the debating circuit. In Gifted Tongues,

Gary Alan Fine offers a rich description of this world as a testing ground for both intellectual and emotional development, while seeking to understand adolescents as social actors. Considering the benefits and drawbacks of the debating experience, he also recommends ways of reshaping programs so that more high schools can use them to boost academic performance and foster specific skills in citizenship. Fine analyzes the training of debaters in rapid-fire speech, rules of logical argumentation, and the strategic use of evidence, and how this training instills the core values of such American institutions as law and politics. Debates, however, sometimes veer quickly from fine displays of logic to acts of immaturity--a reflection of the tensions experienced by young people learning to think as adults. Fine contributes to our understanding of teenage years by encouraging us not to view them as a distinct stage of development but rather a time in which young people draw from a toolkit of both childlike and adult behaviors. A well-designed debate program, he concludes, nurtures the intellect while providing a setting in which teens learn to make better behavioral choices, ones that will shape relationships in their personal, professional, and civic lives.
