The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care

The scope of practice for Certified Nurse-Midwives (CNMs) and Advanced Practice Registered Nurses (APRNs) has expanded to encompass the performance of obstetrical ultrasounds in a variety of settings, including obstetric triage. The focus of this Doctor of Nursing Practice (DNP) project evaluated the impact of implementation of evidenced-based guidelines on the utilization of first-trimester ultrasound by CNMs and APRNs in an obstetric triage unit. The project took place over a six-month period of time and data collection included three consecutive months of retrospective data prior to implementation of guidelines followed by three consecutive months post-implementation of guidelines. A two-

sample test of proportions using Stata 17 (StataCorp, College Station, TX) was performed. The rate of first ultrasounds performed pre-implementation of evidence-based practice guidelines was 8.92% and post-implementation was 8.03%. This difference was not statically significant with $p= 0.108$ and $z=1.240$. There was not a statistically significant difference in the rate of first-trimester ultrasounds being performed by CNMs and APRNs pre-implementation versus post-implementation of evidence-based practice guidelines. However, best practices were identified and included improved consistency and accuracy in ultrasound documentation, utilization of first-trimester ultrasounds based on clinical indications, and adoption of the evidenced based protocol by the institution as part of assessing ongoing quality of care. First-trimester ultrasounds within obstetric triage are now being
