These thirteen short stories were written between 1924 and 1928. Eleven were collected in The Woman Who Rode Away (1928), though 'The Man Who Loved Islands' appeared in the American edition only and the other two in The Lovely Lady (1933). An unpublished fragment 'A Pure Witch' is also included.

Eisenhower at Columbia

Bringing together critics of immigration and multiculturalism, this work argues that the policies of the immigration-receiving countries are leading to cultural and ethnic problems. It contains both original work as well as material first published in the American journal *The Social Contract*.

Jacobs recounts the hostility of campus liberal intellectuals who had increasingly resented Eisenhower's presidency and were offended by the New York Times's endorsement of Eisenhower over Adlai E. Stevenson for the 1952 presidential campaign. Jacobs views Eisenhower's years as university president as playing a significant role in preparing him for his White House years." "Jacobs' insights on Eisenhower's presidency at Columbia will be of interest to Eisenhower's biographers, college and university administrators, American studies students, and the general public curious about Eisenhower's public service as a civilian before he became U.S. president."--BOOK JACKET.

First International Conference on Cryptology in Malaysia, Kuala Lumpur, Malaysia, September 28-30, 2005, Proceedings

The Symposium on Magnetic Ultrathin Films, Multilayers and Surfaces, hosted by the European Materials Research Society, was held at the Palais de la Musique et des Congr é in Strasbourg, France on June 4-7, 1996. Its central theme was the relationship of magnetic properties and device performance to structure at the nano and micrometer length scale. Research on the magnetism of surfaces, ultrathin films and multilayers has increased dramatically during recent years. This development was triggered by the discovery of coupling between ferromagnetic layers across nonmagnetic spacer layers and of the giant magnetoresistance effect in systems of reduced dimension using various micro and nanofabrication techniques has become a subject of special interest. It is certainly the promising application potential of these effects in new magnetic recording device geometries which causes this intensive research, which is done both by companies and at universities and research institutes. A selection of invited and contributed papers presented at the Symposium and accepted for publication is contained in this volume. The contents of these proceedings are organized into seven sections. A. Nanowires, Nanoparticles, Nanostructuring B. Ultrathin Films and Surfaces, Characterization C. Giant Magnetoresistance D. Coupling, Tunneling E. Growth, Structure, Magnetism F. Growth, Structure, Magnetoresistance G. Coupling, Magnetic processes, Magneto-optics. The first four sections contain invited and oral contributed papers in the listed research domains, while the last three sections contain the contributions presented during three large poster sessions.

The Preventive Maintenance Monthly is an official publication of the Army, providing information for all soldiers assigned to combat and combat duties. The magazine covers issues concerning maintenance, maintenance procedures and supply problems.

Congressus Numerantium

Do you know the 12 months of the year? This illustrated nonfiction book tells young readers what makes June special, including when it is and what holidays it has. Charming illustrations and rhyming text make learning the months of the year a snap! Looking Glass Library is an imprint of Magic Wagon, a division of ABDO Group. Grades P-2.

Reflective Language Teaching: Practical Applications for TESOL Teachers is an extensively revised and updated second edition of the popular and accessible text Reflective Language Teaching: From Research to Practice originally published in 2008. This fully up-to-date second edition includes: - an expanded preface - updated case studies and new cases throughout that deal with new developments in language teaching and reflective practice - fully updated citations - three brand new chapters, on online reflective practice and teaching young learners, and a new final chapter on developing a 'culture of reflection' As in the first edition, this book outlines strategies for professional development through reflective practice in the language classroom.

Accessible and comprehensive, the book presupposes no prior knowledge of linguistics or language teaching, and each chapter includes reflective discussion questions to help the reader apply the strategies and procedures discussed.

Progress in Cryptology - Mycrypt 2005

Combinatorial research has proceeded vigorously in Russia over the last few decades, based on both translated Western sources and original Russian material. The present volume extends the extremal approach to the solution of a large class of problems, including some that were hitherto regarded as exclusively algorithmic, and broadens the choice of theoretical bases for modelling real phenomena in order to solve practical problems. Audience: Graduate students of mathematics and engineering interested in the thematics of extremal problems and in the field of combinatorics in general. Can be used both as a textbook and as a reference handbook.

This book constitutes the proceedings of the 10th International Conference on Latent Variable Analysis and Signal Separation, LVA/ICA 2012, held in Tel Aviv, Israel, in March 2012. The 20 revised full papers presented together with 42 revised poster papers, 1 keynote lecture, and 2 overview papers for the regular, as well as for the special session were carefully reviewed and selected from numerous submissions. Topics addressed are ranging from theoretical issues such as causality analysis and measures, through novel methods for employing the well-established concepts of sparsity and non-negativity for matrix and tensor factorization, down to a variety of related applications ranging from audio and biomedical signals to precipitation analysis.

The British Empire Year Book

This collection of original essays brilliantly interrogates the often ambivalent place of Africa in the imaginations, cultures and politics of its “New World” descendants. Combining literary analysis, history, biography, cultural studies, critical theory and politics, *Imagining Home* offers a fresh and creative approach to the history of Pan-Africanism and diasporic movements. A critical part of the book's educational and political institutions and structures of domination over Africa and the African diaspora. Class and gender are placed at center stage alongside race in the exploration of how the discourses and practices of Pan-Africanism have been shaped. Other issues raised include the myriad ways in which grassroots religious and cultural movements informed Pan-Africanist political organization. Caribbean intellectuals in the formation of Pan-African thought—including W.E.B. DuBois, C.L.R. James and Adelaide Casely Hayford; the historical, ideological and institutional connections between African-Americans and South Africans; and the problems and prospects of Pan-Africanism as an emancipatory strategy for black people throughout the Atlantic.

This book presents a comprehensive overview of current state-of-the-art clinical physiological imaging of brain tumors. It focuses on the clinical applications of various modalities as they relate to brain tumor imaging, including techniques such as blood oxygen level dependent functional magnetic resonance imaging, diffusion tensor imaging, magnetic source imaging/magnetoencephalography, magnetic resonance spectroscopic imaging, amide proton transfer imaging, high angular resolution diffusion imaging, and molecular imaging. Featuring contributions from renowned experts in functional imaging, this book examines the diagnosis and characterization of brain tumors, details the application of functional imaging to treatment planning and monitoring of therapeutic intervention, and explores functional imaging. Intended for neuro-oncologists, neurosurgeons, neuroradiologists, residents, and medical students, *Functional Imaging of Brain Tumors* is a unique resource that serves to advance patient care and research in this rapidly developing field.
