**Academia's Digital Voice: A Conversation on 21st Century Higher Education** provides critical information on an area that needs particular attention given the rapid introduction and immersion into digital technologies that took place during the pandemic, including quality assurance and assessment. Sections discuss the rapid changes called into question as student mobility, pedagogical readiness of academics, technological readiness of institutions, student readiness to adopt online learning, the value of higher education, the value of distance learning, and the changing role of administration and faculty were thrust upon institutions. The unprecedented speed of international lockdowns caused by the pandemic necessitated HEIs to make rapid changes in both teaching and assessment approaches. The quality of these and sacrosanctity of the academic voice has long been the central tenet of higher education. While history is replete with challenges to this, the current, rapid shift to online education may represent the greatest threat and opportunity so far. Focuses on the academic voice in HEI Presents an authentic message and mode for the new world we live in post COVID Includes a section on academic predictions for higher education institutions

**An ideal complement for any history course, A Short Guide to Writing About History** stresses thinking and writing like an historian. It also gives professors, teachers, and librarians a flexible text that can serve as the basis of a course in information literacy or research skills, a basic research guide for any information literacy course, or a supplemental text. This second edition has been reorganized for greater ease of use based on the information literacy models consulted. All chapters have been fully updated and now include extended coverage of the topics that appeared in the first edition; additionally, a new chapter on managing information has been added.*

*Essential reading for online instructors, updated to cover new and emerging issues and technologies The Online Teaching Survival Guide provides a robust overview of theory-based techniques for teaching online or technology-enhanced courses. Covering all aspects of online teaching, this book reviews the latest research in cognitive processing and related learning outcomes while retaining a focus on the practical. A simple framework of instructional strategies mapped across a four-phase timeline provides a concrete starting point for both new online teachers and experienced teachers designing or revamping an online course. Essential technologies are explored in their basic and expanded forms, and traditional pedagogy serves as the foundation for tips and practices customized for online learning. The tips cover course management, social presence, community building, integration of new technologies, discussion and questioning techniques, assessment, and debriefing, along with new coverage of intensive or accelerated courses, customizing learning strategies, developing expertise, advanced course design, and assessment techniques exclusive to this new second edition. The theory and techniques of successful online teaching can be significantly different from those used face-to-face. With more and more classes being offered online, this book provides a valuable resource for taking your course to the next level. Understand the technology used in online teaching Learn specialized pedagogical tips and practices Examine new research on cognition and learning Adopt a clear framework of instructional strategies The explosion of online learning has created a demand for great online teachers. Increasingly, faculty who normally teach face-to-face are being asked to cover online courses—yet comprehensive pedagogical resources are scarce. The learning curve is huge, and faculty need a practical approach to course design and management that can be quickly and easily implemented. The*

*Online Teaching Survival Guide* provides that essential resource, with a customizable framework and deeper exploration of effective online teaching.

Combining sound theory with rich hands-on activities, *Informed Choices: A Guide for Teachers of College Writing* is built on the premise that teaching writing is not about mastering a single best practice, but instead requires being responsive to a series of tradeoffs and paradoxes. Ideal for new TAs and experienced professors alike, it helps teachers navigate complex choices about course design, assessment, even professional growth—all within the context of trends in the field, institutional expectations, and their evolving pedagogical philosophies.

The eight essays in *Campus Conversations* provide some of the best scholarly work emerging from individual faculty learning communities in a statewide program called the Chancellor's Learning Scholar (CLS) program. The CLS program began in 2018 as an initiative designed to include large numbers of the University System of Georgia's (USG) about 12,000 fulltime teaching faculty in the USG's statewide student success efforts. The approximately 2,000 faculty who have participated in the first two years of the CLS program learned about the eight pedagogies of student success which can help engage students more deeply, thereby retaining them and deepening their learning. These pedagogies include small teaching (based on the Jim Lang book), inclusive pedagogy, Transparency in Learning and Teaching (TiLT), course design, high impact practices (HIPs), brain-based learning, academic mindset, and the Scholarship of Teaching and Learning (SoTL). As teaching and learning scholarship, each essay has its origin in the topic for which the learning community was formed. The collection demonstrates the range of topics and many of the ways in which USG faculty have explored and applied these pedagogies to their own institutional contexts and courses. The essays selected for inclusion in this volume also embody different responses to the outcomes of the program as set out at the inception of the program.

*Intersectional Automations* explores a range of situations where robotics, biotechnological enhancement, artificial intelligence (AI), and algorithmic culture collide with intersectional social justice issues such as race, class, gender, sexuality, ability, and citizenship. As robots, machine learning applications, and human augmentics are artifacts of human culture, they sometimes carry stereotypes, biases, exclusions, and other forms of privilege into their computational logics, platforms, and/or embodiments. The essays in this multidisciplinary collection consider how questions of equity and social justice impact our understanding of these developments, analyzing not only the artifacts themselves, but also the discourses and practices surrounding them, including societal understandings, design choices, law and policy approaches, and their uses and abuses.

The second edition of Rotenberg's popular guide to college teaching includes additional material on teaching in a digital environment, universal design, and teaching diverse students. As in the first edition, the book provides a hands-on, quick-start guide to the complexities of the college classroom for instructors in their first five years of teaching independently. The chapters survey the existing literature on how to effectively teach young adults, offering specific solutions to the most commonly faced classroom dilemmas. The author, a former department chair and award-winning instructor, encourages the new teacher to support their students as individual learners who are engaged in a program of study beyond their individual class. A focus on the choices made during the design of the course helps the instructor coordinate their class with a department or college curriculum. An extensive discussion of the relationship between classroom design and class size, as well as tips of assessment and grading, enable the new instructor to better handle the challenges of contemporary college classrooms.

"At long last, a discussion of plagiarism that doesn't stop at 'Don't do it or else,' but does full justice to the intellectual interest of the topic!" ---Gerald Graff, author of *Clueless in Academe* and 2008 President, Modern Language Association This collection is a timely intervention in national debates about what constitutes original or plagiarized writing in the digital age. Somewhat ironically, the Internet makes it both easier to copy and easier to detect copying. The essays in this volume explore the complex issues of originality, imitation, and plagiarism, particularly as they concern students, scholars, professional writers, and readers, while also addressing a range of related issues, including copyright conventions and the ownership of original work, the appropriate dissemination of innovative ideas, and the authority and role of the writer/author. Throughout these essays, the contributors grapple with their desire to encourage and maintain free access to copyrighted material for noncommercial purposes while also respecting the reasonable desires of authors to maintain control over their own work. Both novice and experienced teachers of writing will learn from the contributors' practical suggestions about how to fashion unique assignments, teach about proper attribution, and increase students' involvement in their own writing. This is an anthology for anyone interested in how scholars and students can navigate the sea of intellectual information that characterizes the digital/information age. "Eisner and Vicinus have put together an impressive cast of contributors who cut through the war on plagiarism to examine key specificities that often get blurred by the rhetoric of slogans. It will be required reading not only for those concerned with plagiarism, but for the many more who think about what it means to be an author, a student, a scientist, or anyone who negotiates and renegotiates the meaning of originality and imitation in collaborative and information-intensive settings." ---Mario Biagioli, Professor of the History of Science, Harvard University, and coeditor of *Scientific Authorship: Credit and Intellectual Property in Science* "This is an important collection that addresses issues of great significance to teachers, to students, and to scholars across several disciplines. . . .

These essays tackle their topics head-on in ways that are both accessible and provocative." ---Andrea Lunsford, Louise Hewlett Nixon Professor of English, Claude and Louise Rosenberg Jr. Fellow, and Director of the Program in Writing and Rhetoric at Stanford University and coauthor of *Singular Texts/Plural Authors: Perspectives on Collaborative Writing* digitalculturebooks is an imprint of the University of Michigan Press and the Scholarly Publishing Office of the University of Michigan Library dedicated to publishing innovative and accessible work exploring new media and their impact on society, culture, and scholarly communication. ### Simple and Practical Pedagogical Tips

Plagiarism is a serious problem in higher education, and one that the majority of university teachers have encountered. This book provides the skills and resources that university teachers and learning and development support staff need in order to tackle it. As a complex issue that requires thoughtful and sensitive handling, plagiarism simply cannot be addressed by warnings; detection software and punishment alone. Teaching to Avoid Plagiarism focuses on prevention rather than punishment and promotes a proactive, rather than reactive, approach to dealing with the issue. Topics covered in this book include: The causes of plagiarism How universities currently deal with plagiarism How teachers can support students in effective source use The role of technology Issues for second language writers and international students Drawing on her teaching experience as well as her academic research, Diane Pecorari offers a unique insight into this pervasive problem as well as practical advice on how to promote good source use to students and help them to avoid plagiarism. With a series of activities to help readers solidify their grasp of the approaches advised in the book, Teaching to Avoid Plagiarism is an essential guide for anyone in a student-facing role who wants to handle plagiarism more effectively. "Diane Pecorari's book provides practical examples and activities on handling plagiarism blended with research-based findings. It is useful for teachers wanting to improve their understanding and practices in managing plagiarism, but also student advisors and academic support skills staff who deal with issues of academic integrity. This book makes a unique contribution to the field of plagiarism management as its structure affords direct professional development opportunities. Assessment tasks, broad questions and activities are provided at the end of each chapter, encouraging readers to understand both policy and practice in their own institution to better manage plagiarism and source attribution." Dr Wendy Sutherland-Smith, School of Psychology, Faculty of Health, Deakin University, Australia "Teaching to Avoid Plagiarism successfully turns attention away from the detection and punishment of plagiarism and focuses instead on understanding and prevention through the promotion of good source use. Combining practical activities based on real-life examples with wide-ranging original research, this important book should be required reading, not only for staff development officers and lecturers, but more widely throughout the higher education community." Maggie Charles, Oxford University Language Centre "Diane Pecorari's insightful research and scholarship on plagiarism is used to excellent effect in this book which advocates a proactive rather than reactive approach to the difficulties faced by students in learning how to integrate their source texts. Thoughtful activities and discussion questions aimed at staff development are teamed with advice on ways to build in support within disciplinary writing which will help students master the necessary academic skills to avoid plagiarism. The emphasis, quite rightly, is also on helping students understand how plagiarism disrupts the ethical values of the academy, and is not just another hurdle placed in their way by academic insiders." Dr Ann Hewings, Director, Centre for Language and Communication, The Open University "As stated by Diane Pecorari in the first sentence of this excellent volume, 'plagiarism is a problem in our universities'. The volume demonstrates clearly how teachers and students can deal with this 'problem' by developing a better understanding of the phenomenon, on the one hand, and developing specific skills in dealing with it, on the other. Working from the principle that 'an ounce of prevention is worth a pound of cure', Diane Pecorari argues for a proactive approach to handling issues of plagiarism, with an emphasis on the need to train students how to deal appropriately with sources. As well as a clear exposition of the theoretical issues at stake, the book contains a wealth of practical activities and discussion questions which will allow readers to develop the sort of competence in dealing with plagiarism that is the goal of the volume." Professor John Flowerdew, City University of Hong Kong

A Guide to Administering Online Learning provides an overview of tasks to be accomplished in order to direct dynamic online initiatives. Experienced distance learning teachers and administrators share their insights regarding what must be done to administer effective online learning.

"What we know about teaching Teenagers", 2019 I would like to thank Dr. Richard NeSmith for helping me know more about what goes through teenagers' minds and grow into a better teacher. Dr. NeSmith's 28-plus years of teaching experience and careful study of biology, developmental and cognitive psychology make him one of the best experts in the field. His book explains the difficulties students have learning at school and reflects on how to overcome them, promoting a better understanding of the changes going on in teenagers' lives as well as an elementary understanding of what causes pain points in the brain of the adult-in-the-making. Above all, Dr. NeSmith reminds us that teenagers are individuals, with their personality, strengths, weaknesses, and their ways of showing love and concern. The book has been carefully researched and will make you aware of the cognitive-emotional interactions going on inside the mind of preadolescents to improve your teaching strategies. It is such a privilege to teach and take teenagers from childhood to adulthood. Whether you are a parent, a teacher, or a school administrator you will find in this book strategies to facilitate learning and encourage lifelong learning. =====

===== A research-based book addressing brain-based learning and how secondary age students best learn and how teachers can best teach to meet those needs. American public education is on life support like never before. Why? The shift from LEARNING to standardized testing, ticking boxes for administrators, and watering down curricula are some of the reasons. This synthesis of brain-based research emphasizes how students best learn. It is NOT a checklist, it is a strategy that empowered teachers can utilize to improve student learning. But, knowing how teens think enables teachers to know HOW TEENS best LEARN. --Dr. Richard NeSmith

The work of teachers is not just to teach. We are also responsible for the basic needs of students. Helping students eat and live, and also helping them find the tools they need to reflect on the present moment. This is exactly in keeping with Paulo Freire's insistence that critical pedagogy be focused on helping students read their world; but more and more, we must together reckon with that world. Teaching must be an act of imagination, hope, and possibility. Education must be a practice done with hearts as much as heads, with hands as much as books. Care has to be at the center of this work. For the past ten years, Hybrid Pedagogy has worked to help craft a theory of teaching and learning in and around digital spaces, not by imagining what that work might look like, but by doing, asking after, changing, and doing again. Since 2011, Hybrid Pedagogy has published over 400 articles from more than 200 authors focused in and around the emerging field of critical digital pedagogy. A selection of those articles are gathered here. This is the first peer-reviewed publication centered on the theory and practice of critical digital pedagogy. The collection represents a wide cross-section of both academic and non-academic culture and features articles by women, Black people, indigenous people, Chicax and Latinx writers, disabled people, queer people, and other underrepresented populations. The goal is to provide evidence for the extraordinary work being done by teachers, librarians, instructional designers, graduate students, technologists, and more - work which advances the study and the praxis of critical digital pedagogy.
