***This book illustrates
how MAPLE can be
used to supplement
a standard,
elementary text in
ordinary and partial
differential equation.***

MAPLE is used with several purposes in mind. The authors are firm believers in the teaching of mathematics as an experimental science where the student does numerous calculations and then synthesizes these experiments into a general

theory. Projects based on the concept of writing generic programs test a student's understanding of the theoretical material of the course. A student who can solve a general problem certainly can solve a specialized problem. The authors show

MAPLE has a built-in program for doing these problems.

While it is important for the student to learn MAPLE? in built programs, using these alone removes the student from the conceptual nature of differential equations. The goal of the book is to teach the students

*that it can be used
in an investigative*

way. The

investigative

present in the book*

*are done in desk
