**Do you have less than 1.5 hours to understand the principles and best practices of developing a private equity investment strategy? Do you want to make informed decisions as a leader? This quick guide is for leaders who are pressed for time and need to know the contours of the right approach to make informed decisions, ask the right questions, understand how to analyze the problem and how to provide guidance and input to their teams. We lay out the business case to encourage target companies to agree to the deal and lead indicators for when a potential target acquisition should be approached. The investment thesis is a guide serving four stakeholders. First, it describes the thinking of the principals who are proposing the investment strategy. In other words, why do they believe this investment strategy will work, and how it will work. Second, it is used within the private equity firm to question the strategy. The more unique the strategy, relative to what competitors are pursuing, the more discussions are needed. Third, it becomes the critical document to raise investment funding and help investors understand the risk tolerance and risk appetite of the fund, as well as their potential exit timelines. Fourth, it is also often used to educate and encourage potential acquisition targets to agree to the deal. Over the past 10 years on StrategyTraining.com and FIRMSconsulting.com, you have seen us help numerous clients solve complex business problems: developing a big data strategy, a corporate strategy, a digital & IT strategy, a pandemic & disaster strategy, a luxury brands strategy, a turnaround & transformation strategy, and more—all based on the combined best practices of the author and the ex-McKinsey, BCG et al., partners who produce all the strategy training programs on StrategyTraining.com. An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom—bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Current urban planning systems are not equipped to deal with the major urban challenges of the twenty-first century, including effects of climate change, resource depletion and economic instability, plus continued rapid urbanization with its negative consequences such as poverty, slums and urban informality. These planning systems have also, to a large extent, failed to

meaningfully involve and accommodate the ways of life of communities and other stakeholders in the planning of urban areas, thus contributing to the problems of spatial marginalization and exclusion. It is clear that urban planning needs to be reconsidered and revitalized for a sustainable urban future. Planning Sustainable Cities reviews the major challenges currently facing cities and towns all over the world, the emergence and spread of modern urban planning and the effectiveness of current approaches. More importantly, it identifies innovative urban planning approaches and practices that are more responsive to current and future challenges of urbanization. The Global Report on Human Settlements is the most authoritative and up-to-date global assessment of human settlements conditions and trends. It is an essential reference for researchers, academics, public authorities and civil society organizations all over the world. Preceding issues of the report have addressed such topics as Cities in a Globalizing World, The Challenge of Slums, Financing Urban Shelter and Enhancing Urban Safety and Security.

*This edited book brings together an international cast of contributors to examine how academic literacy is learned and mastered in different tertiary education settings around the world. Bringing to the fore the value of qualitative enquiry through ethnographic methods, the authors illustrate in-depth descriptions of genre knowledge and academic literacy development in first and second language writing. All of the data presented in the chapters are original, as well as innovative in the field in terms of content and scope, and thought-provoking regarding theoretical, methodological and educational approaches. The contributions are also representative of both novice and advanced academic writing experiences, providing further insights into different stages of academic literacy development throughout the career-span of a researcher. Set against the backdrop of internationalisation trends in Higher Education and the pressure on multilingual academics to publish their research outcomes in English, this volume will be of use to academics and practitioners interested in the fields of Languages for Academic Purposes, Applied Linguistics, Literacy Skills, Genre Analysis and Acquisition and Language Education.*
