Unfortunately, many fundamental Android security features have been little more than a black box to all but the most elite security professionals—until now.

In *Android Security Internals*, top Android security expert Nikolay Elenkov takes us under the hood of the Android security system. Elenkov describes Android security architecture from the bottom up, delving into the implementation of major security-related components and subsystems, like Binder

S20. By naming the new model S20, Samsung first of all broke the associative link of its products with the lineup of its main competitor - Apple iPhone. The company was constantly in the role of "catching up", releasing its flagship with a similar index with a delay of half a year. Let me remind you that the iPhone 11 was introduced back in September 2019 and the Galaxy S11 would again feel a bit late. In addition, in the new line, for the first time since the announcement of the Galaxy S6 Edge in 2015, Samsung has changed a key design element of its flagships, almost completely eliminating the curved

display edges. Samsung Galaxy S20 became the first smartphone in the S-line, which lost the 3.5 mm jack, but received support for eSIM (built-in SIM card). Also, for the first time in many years, the company changed the matrix of its cameras to a new sensor from Sony - the IMX555 model. And, of course, this is the first time a new display with a refresh rate of 120 Hz is used. I disagree with those who don't see much change in the Galaxy S20 over previous models. These differences exist and they are quite serious. Rather, the question is different - isn't the new model a "step forward and two steps back"?
