Diabetes is one of the fastest growing diseases in the world; the American Diabetes Association reports that 1.7 million new diagnoses are made each year. After her own diagnosis, Gretchen Becker became a "patient-expert," educating herself on every aspect of type 2 diabetes and eventually compiling everything she had learned into this step-by-step guidebook for others. Now in its third edition, *The First Year: Type 2 Diabetes* takes you through everything you need to know and do in your first year with diabetes. In clear and accessible language, Becker covers a wide range of practical, medical and lifestyle issues, from coming to terms with your diagnosis to diet and exercise, testing routines, insurance issues, and the most up-to-date information on new medications and supplements.

This book is a slightly emanded version of a dissertation presented at the University of Hull in 1972. I realise only too well the deficiencies of style, presentation and material which this involves. The title implies a more final note than I had intended in my treatment of Porphyry. On reflexion, however, it seemed the most suited to convey the general purpose of my enquiries. A more rounded assessment of Porphyry can come only after some more basic work has been completed. An edition of his philosophical fragments, to which I am now turning my attention, is a prerequisite. Iowe, of course, a great deal to all those who have written on Neo Platonism. I am particularly indebted to Prof. Wily. Theirs under whose guidance I studied in Bern. Conversation with him always resulted in new directions of enquiry and I was constantly stimulated by his breadth of knowledge. I must also thank Prof. A. H. Armstrong who has constantly encouraged me and helped me to look more deeply into a number of problems. Welcome, too, was a detailed criticism of Part Two by Dr. R. T. Wallis. Their criticism and advice have not always been followed and the responsibility for the faults and weak nesses of this book rests on myself.

Mathematical and philosophical thought about continuity has changed considerably over the ages, from Aristotle's insistence that a continuum is a unified whole, to the dominant account today, that a continuum is composed of infinitely many points. This book explores the key ideas and debates concerning continuity over more than 2500 years.

We usually live our lives in vicious cycles. We hardly can get out of them or break loose from their control. Sometimes they are related to some place, time, person, or event. Other times they are related to an idea so deeply planted inside us that we can't come out of its cocoon. Maybe they are related to a connection that we can't be free from its restrictions. Finally, sometimes they are related to ourselves; body and soul. We invent those circles or they are imposed upon us. Then we live within their borders. We rejoice them first, and then we complain. Or, we complain from them first, and then we give up ourselves to them happily. We try to break loose a lot, although the constraint, unconsciously, makes up happy. Or, we often look for a constraint to protect us from what our souls were created and imprinted to love; the freedom. We struggle with ourselves, others, and life; although we mostly don't know what we really want. Moreover, we do not dare to look for what we want. This is why most of us live in ... vicious circles.

Thinking Through Utilitarianism: A Guide to Contemporary Arguments offers something new among texts elucidating the ethical theory known as Utilitarianism. Intended primarily for students ready to dig deeper into moral philosophy, it examines, in a dialectical and reader-friendly manner, a set of normative principles and a set of evaluative principles leading to what is perhaps the most defensible version of Utilitarianism. With the aim of laying its weaknesses bare, each principle is serially introduced, challenged, and then defended. The result is a battery of stress tests that shows with great clarity not only what is attractive about the theory, but also where its problems lie. It will fascinate any student ready for a serious investigation into what we ought to do and what is of value.

Diverse Islamic groups have triggered a «revival of Islam» in Central Asia in the last decades. As a result, there has been a general securitization of Islam by the governments: not only do they combat the terrorist Islamic Movement of Uzbekistan but also outlaw popular groups such as the Gülen movement. However, strong repression of religion might lead to radicalization. Kathrin Lenz-Raymann tests this hypothesis with an agent-based computer simulation and enriches her study with interviews with international experts, leaders of political Islam and representatives of folk Islam. She concludes that ensuring religious rights is essential for national security.

Janis Birkeland presents the innovative new paradigm of 'Positive Development' in which the built environment provides greater life quality, health, amenity and safety for all without sacrificing resources or money. With a different form of design, development itself can become a 'sustainability solution'. A cornerstone of this new paradigm is the eco-retrofitting of the vast urban fabric we already inhabit. The author presents a revolutionary new tool called SmartMode to achieve this end. This book challenges everyone working in or studying the areas of sustainable development, planning, architecture or the built environment to rethink their current ideas and practices.

David Bostock presents a critical appraisal of Bertrand Russell's philosophy from 1900 to 1924—a period that is considered to be the most important in his career. Russell developed his theory of logic from 1900 to 1910, and over those years wrote the famous work Principia Mathematica with A. N. Whitehead. Bostock explores Russell's development of 'logical atomism', which applies this logic to problems in the theory of knowledge and in metaphysics, and was central to his philosophical work from 1910 to 1924. This book is the first to focus on this important period of Russell's development, examining the three key areas of logic and mathematics, knowledge, and metaphysics, and demonstrating the enduring value of his work in these areas.

Circular analyses of philosophical, linguistic, or computational phenomena have been attacked on the assumption that they conflict with mathematical rigour. Barwise and Moss have undertaken to prove this assumption false. This volume is concerned with extending the modelling capabilities of set theory to provide a uniform treatment of circular phenomena. As a means of guiding the reader through the concrete examples of the theory, the authors have included many exercises and solutions: these exercises range in difficulty and ultimately stimulate the reader to come up with new results. Vicious Circles is intended for use by researchers who want to use hypersets; although some experience in mathematics is necessary, the book is accessible to people with widely differing backgrounds and interests.

The Jesus jigsaw When the thought first occurred to me that Jesus was a psychologist, I was excited, because it was like seeing a pattern in a jigsaw puzzle that had baffled me for most of my life. I had always been interested in the parables of Jesus. I gathered them together, noticed similarities; I read books about them; a couple of the parables became the guiding principles of my life. But no matter how much I looked there were still some that didn't make sense, and readers who have been Bible students will have hit the same problem. For instance, what would you make of an employer who throws his staff in jail, or another employer who gives some of his workers 12 hours' pay for one hour's work, or a father who throws a party for a son who has just blown the family fortune, or a king who has his managers tortured. These pieces don't fit. But if you love the parables, as I do, you come back to them from time to time. That's what I was a doing a few years ago. I was preparing to go back into the Methodist ministry, after a long break. Another part was updating my study of psychology. I had studied it as part of my original ministry training, but I wanted to study the main new version today, cognitive therapy. With this approach, if a client looks worried, the therapist says: "What are are you feeling right now?" And the client says, "I feel tense and stressed." And the therapist says, "What were you thinking about just before you started feeling stressed? And a pattern emerges of the things that get this client into trouble. These patterns are called "schemas". The penny drops Well, I was doing these two kinds of research when it occurred to me that there were characters in the parables who had bad schemas. And immediately some of my problem parables made sense! The people in these parables needed therapy. And I believe that's why Jesus was telling parables: to help people recognize their bad schemas and do something about them. Let's not exaggerate I don't want to overstate the case. These parallels between Jesus and psychology don't apply to everything he said: they mainly apply to his parables. And even the bit of psychology that Jesus did do was pretty hit and miss. He did it in public, so you couldn't really discuss your problem with him, and you might sit on the edge of a crowd of listeners for a couple of hours and your particular problem might not come up at all. Or you might be a hypochondriac and start trying medicine that doesn't really suit you at all. You might hear a parable about loving your neighbor, and you might think: my husband is beating me up but it's my duty to love him. And you would be dead wrong; you should be calling the police. It's like taking somebody else's medicine! So I'd advise readers not to be too keen to copy the parables! When in doubt, see a professional. Public education An important part of Jesus' psychology is that he did it in public, and that is one of my hopes in publishing this book, that people will read it, preachers will preach about it, and it will contribute to public understanding. Richard received his education on the East Coast: A Master's degree at the Fletcher School of Law and Diplomacy, and a Ph.D. in Economics at Rutgers University in New Brunswick, N.J. Both Richard and June were raised in the inner city of Newark, went to the same high school, and were married in 1954. June received a bachelor's degree from Portland State University and a Ph.D. from the University of Oregon, both in Sociology. This interconnection between the economic and sociological permeates their basic research focus which, overall, is directed toward an analysis of the dynamics of culture evolution. Richard's and June's current research interests relate to the interrelation between globalization and culture.
