Fuels and New Propellants is a compendium of papers presented at a conference on Fuel and New Propellants by the Federazione Associazioni Scientifiche e Tecniche, sponsored by the Consiglio Nazionale Delle Ricerche, held at Milan, Italy in June 1963. The book presents the researches made on the scientific, technical, and industrial applications of new and improved fuels and propellants. The collection contains papers that deal with residual fuels and the marine diesel engine; the characteristics of processes for the production of high octane fuels; liquid and solid propellants for space rockets; and technical problems in the production of solid and liquid propellants. Petrochemists, chemists, and researchers in the field of fuels and propellants will find this text interesting and insightful.

*MODERN DIESEL TECHNOLOGY: LIGHT DUTY DIESELS provides a thorough introduction to the light-duty diesel engine, now the power plant of choice in pickup trucks and automobiles to optimize fuel efficiency and longevity. While the major emphasis is on highway usage, best-selling author Sean Bennett also covers small stationary and mobile off-highway diesels. Using a modularized structure, Bennett helps the reader achieve a conceptual grounding in diesel engine technology. After exploring the tools required to achieve hands-on technical competency, the text explores major engine subsystems and fuel management systems used over the past decade, including the common rail fuel systems that manage almost all current light duty diesel engines. In addition, this text covers engine management systems, computer controls, multiplexing electronics, diesel emissions and the means used to control them. All generations of CAN-bus technology are examined, including the latest automotive CAN-C multiplexing and the basics of network bus troubleshooting. ASE A-9 certification learning objectives are addressed in detail. A popular feature in Antique Automobile magazine, Steven Rossi's columns open up the world of old cars, transporting readers to earlier times from the age of horseless carriages through the evolution of cars and car culture. This compilation from a decade's writings draws on a lifetime of knowledge and experience amassed in the antique auto hobby, the enthusiast community and the automotive industry to explore topics large and small. The selected essays, edited and with photographs provided by award-winning Antique Automobile editor West Peterson, include informative treatments of historical subjects and technical matters, whimsical observations, important brand and model analyses, profiles of compelling personalities and an abundance of fascinating excursions down side roads of the automotive map. For the curious, think of this collection as a crash course in automotive history. For those already immersed in the old car universe, it offers fresh insights and an authoritative perspective on topics of lasting interest.
