Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatowner's Practical and Technical Cruising Manual and Boatowner's Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

The instant New York Times bestseller, now available in paperback and featuring

a new afterword from the author—the insider's guide to the Facebook/Cambridge Analytica scandal, the inner workings of the tech world, and who really runs Silicon Valley “Incisive.... The most fun business book I have read this year.... Clearly there will be people who hate this book – which is probably one of the things that makes it such a great read.” – Andrew Ross Sorkin, New York Times

Imagine a chimpanzee rampaging through a datacenter powering everything from Google to Facebook. Infrastructure engineers use a software version of this “chaos monkey” to test online services’ robustness—their ability to survive random failure and correct mistakes before they actually occur. Tech entrepreneurs are society’s chaos monkeys. One of Silicon Valley’s most audacious chaos monkeys is Antonio García Martínez. After stints on Wall Street and as CEO of his own startup, García Martínez joined Facebook’s nascent advertising team. Forced out in the wake of an internal product war over the future of the company’s monetization strategy, García Martínez eventually landed at rival Twitter. In *Chaos Monkeys*, this gleeful contrarian unravels the chaotic evolution of social media and online marketing and reveals how it is invading our lives and shaping our future.

**Electrical Power Systems** provides comprehensive, foundational content for a wide range of topics in power system operation and control. With the growing importance of grid integration of renewables and the interest in smart grid technologies it is more important than ever to understand the fundamentals that underpin electrical power systems. The book includes a large number of worked examples, and questions with answers, and emphasizes design aspects of some key electrical components like cables and breakers. The book is designed to be used as reference, review, or self-study for practitioners and consultants, or for students from related engineering disciplines that need to learn more about electrical power systems. Provides comprehensive coverage of all areas of the electrical power system, useful as a one-stop resource Includes a large number of worked examples and objective questions (with answers) to help apply the material discussed in the book

Features foundational content that provides background and review for further study/analysis of more specialized areas of electric power engineering

Журнал «Капитан-Клуб» выходит с 1997 года. С тех пор он снискал популярность у профессиональных моряков и людей, увлечённых плаваниями на яхтах и катерах. Формат «Капитан-Клуба», многообразии публикуемых материалов не позволяют назвать его сугубо техническим или литературным изданием. Идея, которая некогда дала импульс к созданию журнала, – собрать вокруг него людей, влюбленных в море, корабли, путешествия. Сегодня в «Капитан-Клубе» можно найти информацию о соревнованиях, тестах новых яхт и катеров, об интересных плаваниях. Сотрудники журнала имеют богатый опыт работы в судостроении, увлекаются парусом и продолжают путешествовать, участвовать в различных регатах. Актуальность и качество публикаций «Капитан-Клуба» признают не только читатели, но и «коллеги по цеху». Читайте в номере: От киля до клотика Ахтунг! Яхтинг! Музей под открытым небом «Мнев КСН-1350». The coastal and archipelago areas in the Baltic Sea are popular destinations for a number of tourists. An important group of tourists is boaters, who visit the coastal areas during a short summer period. Boat owners are sometimes pictured as having a great interest for the nature and a willingness to do right. Pollution from pleasure boats such as discharges of oil and fuel, antifouling paints and cleaning agents have a negative impact on the coastal environment. Environmentally sound alternatives exist to some extent, but are not very common. Sustainable alternatives for boaters are lacking behind. One of the underlying purposes of this study was to understand how we can help boat owners change their behaviour and decrease the negative impact on the marine environment. The survey among boaters has been conducted in Finland, Sweden and Denmark with a web based survey ordered by the Keep Sweden

The RYA Yachtmaster examination is the gold-standard qualification for sail and power boaters the world over. This eBook is the RYA's official and definitive guide to the exam. It offers a unique insight into what you need to know, how the exam will be conducted, and the skills required. Whether you are going to take the exam, or are thinking of it and want to find out what you will face on the day, this is the book that you must have. Author James Stevens is the creator of the current RYA Yachtmaster scheme for sail and power boats. Formerly the RYA's Training Manager, he has over 30 years' experience examining, and there is nobody better to help you succeed.

In *How to Super Tune and Modify Holley Carburetors*, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor to perform its best for your performance application.

To extract maximum performance, an engine needs an efficient, well-designed, and properly tuned exhaust system.

In fact, the exhaust system's design, components, and materials have a large impact on the overall performance of the engine. Engine builders and car owners need to carefully consider the exhaust layout, select the parts, and fabricate the exhaust system that delivers the best performance for car and particular application. Master engine builder and award-winning writer Mike Mavrigian explains exhaust system principles, function, and components in clear and concise language. He then details how to design, fabricate, and fit exhaust systems to classic street cars as well as for special and racing applications. Air/exhaust-gas flow dynamics and exhaust system design are explained. Cam duration and overlap are also analyzed to determine how an engine breathes in air/fuel, as the exhaust must efficiently manage this burned mixture. Pipe bending is a science as well as art and you're shown how to effectively crush and mandrel bend exhaust pipe to fit your header/manifold and chassis combination. Header tube diameter and length is taken into account, as well as the most efficient catalytic

converters and resonators for achieving your performance goals. In addition, Mavrigian covers the special exhaust system requirements for supercharged and turbocharged systems. When building a high-performance engine, you need a high-performance exhaust system that's tuned and fitted to that engine so you can realize maximum performance. This comprehensive book is your guide to achieving ultimate exhaust system performance. It shows you how to fabricate a system for custom applications and to fit the correct prefabricated system to your car. No other book on the market is solely dedicated to fabricating and fitting an exhaust system in high-performance applications.
