This book is an illustrated guide to assistive technologies and devices (AT/AD). It chronicles the use of AT/AD - technology used by individuals with disabilities to perform functions that might otherwise be difficult or impossible. In general, AT can include mobility devices such as walkers and wheelchairs, as well as hardware, software, and peripherals that assist people with disabilities in accessing computers or other information technologies. Advanced AT has coincided with the advent of personal electronic devices that could be customized for use, such as computers and smart phones. For people with disabilities, AT includes simple gadgets for the home and office, electronic gadgets and complex computer systems for the workplace, mobility

A diagnosis of Parkinson's disease is as disorienting as it is devastating. The Complete Guide for People With Parkinson's Disease and

*Their Loved Ones helps make sense of what comes next and what can be done, not just for those suffering from the disease but for their family and friends as well. A trained nurse and primary caregiver for her mother, who was diagnosed with Parkinson's disease in 1991, Lianna Marie draws upon over twenty years of education, research, and direct experience. Written in straightforward and easily accessible language, this essential guide aims to help patients better understand their role in their treatment so that they may continue to lead happy and hopeful lives. Topics covered include nutrition and exercise, alternative and complementary therapies, medication and treatment, and what caregivers can do to help. Written by an international expert on Parkinson's who has confronted the disease firsthand, *The Complete Guide* serves as the go-to book for comprehensive, easy-to-understand information for all Parkinson's patients and their loved ones.*

*An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.*
