

Western Europe And North America Guided Key

This book provides information about how policies and practices regarding public financing abroad, focusing on North America and several Western European countries, can help Americans develop their own ideas about reform possibilities.

Based on new and existing research by a world-class scholar, this is the first book in twenty years to examine the dynamics of the entire American-Western European relationship since 1945. The relationship between the United States and Western Europe has always been crucial and recent events dictate that it is becoming ever more so. In this important new work, Geir Lundestad analyses the balance between the cooperation and conflict which has characterized this relationship in the post-war period. He examines talk of transatlantic drift, and the strain now apparent between the USA and the nation states of Western Europe. In the concluding section, Lundestad offers a topical view of the future of transatlantic interaction. Throughout the work Lundestad's much cited 'empire by invitation' thesis is both put into practice and extended in time and scope. This book is essential reading for anyone interested in one of the most important and enduring international relationships of the last sixty years.

Urban Restructuring in North America and Western
Europe

Does globalization menace our cities? Are cities able to exercise democratic rule and strategic choice when international competition increasingly limits the importance of place? Cities in the International Marketplace looks at the political responses of ten cities in North America and Western Europe as they grappled with the forces of global restructuring during the past thirty years. H. V. Savitch and Paul Kantor conclude that cities do have choices in city building and that they behave strategically in the international marketplace. Rather than treating cities through case studies, this book undertakes rigorous systematic comparison. In doing so it provides an innovative theory that explains how city governments bargain in the capital investment process to assert their influence. The authors examine the role of economic conditions and intergovernmental politics as well as local democratic institutions and cultural values. They also show why cities vary in their approaches to urban development. They portray how cities are constrained by the dynamics of the global economy but are not its prisoners. Further, they explain why some urban communities have more maneuverability than do others in the economic development game. Local governance, culture, and planning can combine with economic fortune and national urban policies to provide resources that expand or contract the scope for choice. This clearly written book analyzes the political economy of development in Detroit,

Houston, and New York in the United States; Toronto in Canada; Paris and Marseilles in France; Milan and Naples in Italy; and Glasgow and Liverpool in Great Britain.

In virtually all corners of the Western world, 1968 witnessed a highly unusual sequence of popular rebellions. In Italy, France, Spain, Vietnam, the United States, West Germany, Czechoslovakia, Mexico, and elsewhere, millions of individuals took matters into their own hands to counter imperialism, capitalism, autocracy, bureaucracy, and all forms of hierarchical thinking. Recent reinterpretations have sought to play down any real challenge to the socio-political status quo in these events, but Gerd-Rainer Horn's book offers a spirited counterblast. 1968, he argues, opened up the possibility that economic and political elites on both sides of the Iron Curtain could be toppled from their position of unnatural superiority to make way for a new society where everyday people could, for the first time, become masters of their own destiny. Furthermore, Horn contends, the moment of crisis and opportunity culminating in 1968 must be seen as part of a larger period of experimentation and revolt. The ten years between 1956 and 1966, characterised above all by the flourishing of iconoclastic cultural rebellions, can be regarded as a preparatory period which set the stage for the non-conformist cum political revolts of the subsequent 'red' decade (1966-1976). Horn's geographic centres of attention are Western Europe, including the first full examination of Mediterranean revolts, and North America. He placed particular emphasis on cultural nonconformity, the student movement, working class rebellions, the changing contours of the Left, and the meaning of participatory democracy. His book will make fascinating reading for anyone interested in this turbulent period and the fundamental changes that were wrought upon societies either side of the Atlantic.

World trends in freedom of expression and media development:
regional overview of Western Europe and North America

An up-to-date and comparative look at immigration in Europe, the United States, and Canada *Strangers No More* is the first book to compare immigrant integration across key Western countries. Focusing on low-status newcomers and their children, it examines how they are making their way in four critical European countries—France, Germany, Great Britain, and the Netherlands—and, across the Atlantic, in the United States and Canada. This systematic, data-rich comparison reveals their progress and the barriers they face in an array of institutions—from labor markets and neighborhoods to educational and political systems—and considers the controversial questions of religion, race, identity, and intermarriage. Richard Alba and Nancy Foner shed new light on questions at the heart of concerns about immigration. They analyze why immigrant religion is a more significant divide in Western Europe than in the United States, where race is a more severe obstacle. They look at why, despite fears in Europe about the rise of immigrant ghettos, residential segregation is much less of a problem for immigrant minorities there than in the United States. They explore why everywhere, growing economic inequality and the proliferation of precarious, low-wage jobs pose

dilemmas for the second generation. They also evaluate perspectives often proposed to explain the success of immigrant integration in certain countries, including nationally specific models, the political economy, and the histories of Canada and the United States as settler societies. *Strangers No More* delves into issues of pivotal importance for the present and future of Western societies, where immigrants and their children form ever-larger shares of the population.

"This brilliant book, by two of the most eminent scholars of immigration, compares the integration of immigrants on both sides of the Atlantic. Alba and Foner provide a cogent account of the history, sociology, economics, and politics of immigrant integration, and challenge many things we thought we knew about the subject. This is a tour de force."--Mary C. Waters, Harvard University

"Integration is not just about the desires of immigrants or availability of jobs--it is fundamentally about institutions and policies that shape incorporation. In this deft tour de force exploring six countries and multiple areas of life, *Strangers No More* reveals that simple narratives of integration break down in the face of complex institutional arrangements. A must-read for students and scholars alike."--Irene Bloemraad, University of California, Berkeley

"Although all developed nations have become countries of immigration, prior studies have

only analyzed immigrant assimilation on a country-by-country basis. Strangers No More undertakes the first comprehensive look at immigrant integration in six diverse nations. Revealing broad similarities and stark differences in the forces that shape immigrant outcomes, this book is essential reading for all students of international migration in the world today."--Douglas S. Massey, coauthor of *Climbing Mount Laurel* "In many societies throughout the world, immigrants and their descendants are growing to become the lion's share of the population. How have diverse immigrant groups and their subsequent generations fared in this transition? Alba and Foner offer no simple answers, but rather show complex relations of contextual factors, processes, and outcomes. Looking at six nations on both sides of the Atlantic, this comparative work is a masterly exploration."--Steven Vertovec, Max Planck Institute for the Study of Religious and Ethnic Diversity "With its unique scope, this excellent book is a must-read for anybody interested in immigration. It deals with two continents, various immigrant groups, and many fields of inclusion. There is no other book like it."--Jan Willem Duyvendak, University of Amsterdam "This accessible and ambitious book thoughtfully compares the experiences and outcomes for immigrants in six host countries--Canada, France, Germany, Britain, Netherlands, and the United States. Exploring how national and local policies impact the reception and

lives of immigrants, the authors demonstrate that no country has all the answers when it comes to immigration. This work fills a real gap in the literature and will have an impact."--Caroline B. Brettell, Southern Methodist University

Public and even scholarly debates usually focus on the integration problems of Muslim immigrants at the cost of overlooking the role of the growing number of migrant organizations in establishing a crucial link among immigrants themselves, as well as between them and their countries of origin and residence. This book aims to fill a gap in the vast literature on migration from Turkey by contributing the neglected aspect of civic and political participation of Turkish immigrants. It brings together a number of scholars who carried out extensive research on the associational culture of Turkish immigrants living in different countries in Europe and North America. In order to understand the diversity and dynamics within Turkish migrant communities living in these parts of the world yet maintaining transnational ties, this book offers

a comparative and interdisciplinary approach to migrant organizations in general and civic participation and political mobilization of Turkish immigrants in particular. This book was published as a special issue in Turkish Studies.

Originally published in 1994, International Developments in Assuring Quality in Higher Education describes a range of national and international developments which evaluate the quality of education provided by public and private tertiary institutions. The book is based on papers from a conference organized by the International Network of Quality Assurance Agencies in Higher Education, and held in Montreal in 1993. Regional perspectives from Africa, Asia and the Pacific, Latin America, North America and Western Europe are followed by an account of national quality assurance agencies in Chile, Denmark, Korea, New Zealand, South Africa, Quebec, Romania, Scotland and the USA. There are also chapters on the work of UNESCO and the World

Bank in promoting quality in higher education in industrialising nations. Together these papers supplement the account of international initiatives. This step is a step toward greater internationalization of mass communication research. Existing differences between the mass media of North American and Western European countries provide a basis for comparative analyses that illustrate how differences in national mass media systems can contribute towards intellectual understanding of communication behavior. The world of communication scholarship can be divided into two main schools, the empirical school and the critical school. This volume represents some of the leading scholars of each school and is dedicated to the intellectual merging of the schools by means of fostering an improved understanding of each other.

working hours in the United States and recognized the negative repercussions of this new aspect of labor market polarization. As European average working hours have declined over the past decades, scholars have turned little attention to the analysis of extreme working hours in European countries. First, the article documents diverging patterns of extreme working hours in Western Europe. Whereas the Scandinavian and French ratios of workers with extreme hours remained very low, most other countries in Western Europe exhibit significantly higher ratios of extreme workers after the beginning of the 1990s than in the previous two decades. Second, the article detects the development of two diverging trajectories in the advanced capitalist world: one with a strong and stable labor regulation along with a balanced working hour profile and one with gradual deregulation along with an increasing ratio of long work weeks. Finally, using a series of pooled cross-section OLS estimations, the article tests five specific hypotheses, motivated by theories of the welfare state and political economy theories of globalization. The results provide strong empirical evidence for the notion that patterns of extreme working hours are not inherent in post-industrial development. The article uses data from the author's extreme

become acute. This book attempts to provide such a perspective by investigating the major changes in geopolitics and world economy during the past 500 years. However compact, it enables us to understand the present unravelling of Communism and the growing challenge from Asia to Western Superiority. It is shown that in so many ways the problems of the contemporary world spring from the unprecedented era of western domination, which the non-western world is now trying to unlive.
