

Where Do Babies Come From Ages 6 8 Learning About Sex Series

An engaging introduction for very young children to the basic facts of life in a way that is gentle, age-appropriate and accessible. Child psychologist Dr. Jillian Roberts created the Just Enough series to help parents and caregivers approach difficult subjects with little ones. These primers offer a gentle and accessible starting point for conversations about important topics. Research shows that children are learning about sex at an increasingly young age and often from undesirable sources. The Q&A format, with questions posed in the child's voice and answers starting simply and becoming gradually more in-depth, allows the adult to guide the conversation to a natural and satisfying conclusion. Additional questions at the back of the book allow for further discussion. **Where Do Babies Come From?** is the first book in the Just Enough series. Other topics in the series include death, cultural diversity and separation or divorce.

*A powerful look at the importance of a mother's presence in the first years of life **Featured in The Wall Street Journal, and seen on Good Morning America, Fox & Friends, and CBS New York** In this important and empowering book, veteran psychoanalyst Erica Komisar explains why a mother's emotional and physical presence in her child's life--especially during the first three years--gives the child a greater chance of growing up emotionally healthy, happy, secure, and resilient. In other words, when it comes to connecting with your baby or toddler, more is more. Compassionate and balanced, and focusing on the emotional health of children and moms alike, this book shows parents how to give their little ones the best chance for developing into healthy and loving adults. Based on more than two decades of clinical work, established psychoanalytic theory, and the most cutting-edge neurobiological research on caregiving, attachment, and brain development, *Being There* explains:*

- How to establish emotional connection with a newborn or young child--regardless of whether you're able to work part-time or stay home
- How to ease transitions to minimize stress for your baby or toddler
- How to select and train quality childcare
- What's true and false about widely held beliefs like "I'm not good with babies" and "I'll make up for it when he's older"
- How to recognize and combat feelings of postpartum depression or boredom
- Why three months of maternity leave is not long enough--and how parents can take control of their choices to provide for their family's emotional needs in the first three years

Being a new mom isn't easy. But with support, emotional awareness, and coping skills, it can be the most magical—and essential—work we'll ever do.

This book offers a psychoanalytic perspective on learning and teaching and on many of the issues which preoccupy those who work in educational institutions. It looks at the origins of learning in children's early relationships and at factors which help and hinder the educational process in later childhood and adolescence. Amongst the topics addressed in the book are the significance of play and playfulness, the impact of change, separation, times of transition, bereavement, bullying and racism. The author has aimed to set well-established psychoanalytic ideas about learning within the context of current educational practice and to look at the teachers experience alongside that of the students. This volume is a collection of papers, each of which is a version of a lecture previously given as part of the Tavistock course, "Emotional Factors in Learning and Teaching; counselling aspects in education". The course, which is for teachers and others working in educational settings, has been running for more than thirty years.

Why cracking the code of human conception took centuries of wild theories, misogynist blunders, and ludicrous mistakes Throughout most of human history, babies were surprises. People knew the basics: men and women had sex, and sometimes babies followed. But beyond that the origins of life were a colossal mystery. The Seeds of Life is the remarkable and rollicking story of how a series of blundering geniuses and brilliant amateurs struggled for two centuries to discover where, exactly, babies come from. Taking a page from investigative thrillers, acclaimed science writer Edward Dolnick looks to these early scientists as if they were detectives hot on the trail of a bedeviling and urgent mystery. These strange searchers included an Italian surgeon using shark teeth to prove that female reproductive organs were not 'failed' male genitalia, and a Catholic priest who designed ingenious miniature pants to prove that frogs required semen to fertilize their eggs. A witty and rousing history of science, The Seeds of Life presents our greatest scientists struggling-against their perceptions, their religious beliefs, and their deep-seated prejudices-to uncover how and where we come from.
