This volume illustrates the functional properties of NAb. Authors from pioneering groups report in their chapters on the tissue homeostatic, tissue regenerating and regulatory properties of NAb and NAb in pooled human IgG. Scientists interested in the regulation and modulation of components of the immune system found a whole variety of NAb to cytokines with regulatory and protective functions and NAb that modulate, e.g., dendritic cells, regulatory T cells, B cells and granulocytes. Considering the large plasma pools and initial difficulties in preparing IVIG that does not induce adverse effects upon infusion into recipients, this volume ends with a historical chapter on how pooled human plasma was fractionated and the IgG component pretreated for a safe intravenous application.

Both writing and rereading journal entries allow the journal keeper to document thinking; to track changes and review observations; and to examine assumptions and so gain fresh perspectives and insights over past events. The authors present the background to help readers make an informed decision about the value of journals and to determine whether journals will fit appropriately with their teaching objectives or help manage their personal and professional lives. *CRITICAL THINKING IN THE MEDICAL-SURGICAL SETTING* helps students, through the use of case studies, bridge the gap between knowledge and clinical practice. Each case tests the students' content knowledge and helps them practice thinking critically before they face the realities of the workplace. This valuable book is organized into eleven units each focusing on specific body system disorders. Cases are drawn from actual clinical experiences and written by nurses who are experts in a specific area.
