Baby Ruth, Milk Duds, Juicy Fruit, Cracker Jack, Milky Way, Tootsie Roll, Lemonheads--whatever your favorite candy may be, chances are it came from Chicago. For much of its history, the city churned out an astonishing one third of all candy produced in the United States. Some of the biggest names in the industry were based in Chicago: Curtiss, Brach, Tootsie Roll, Leaf, Wrigley, and Mars. Along with these giants were smaller, family-based companies with devoted followings, such as fundraising specialist World's Finest Chocolate and the Ferrara Pan Candy Company, maker of Red Hots

and Jaw Breakers. At its peak, the Chicago candy industry boasted more than 100 companies employing some 25,000 Chicagoans. This fascinating photographic history travels through more than 150 years of the candy trade and explores its role in the growth and development of the city. Packed with vintage images of stores, factories, and advertisements, this mouth-watering book reveals how Chicago candy makers created strong bonds between people and their favorite treats.

This book, which originally appeared as a special issue of TDR/The Drama Review, explores the myriad aesthetic, cultural, and experimental possibilities of radiophony and sound art. Taking the approach that there is no single entity that constitutes "radio," but rather a multitude of radios, the essays explore various aspects of its apparatus, practice, forms, and utopias. The approaches include historical, political, popular cultural, archeological,

Understanding the stars is the bedrock of modern astrophysics. Stars are the source of life. The chemical enrichment of our Milky Way and of the Universe with all elements heavier than lithium originates in the interiors of stars. Stars are the tracers of the dynamics of the Universe, gravitationally implying much more than meets the eye. Stars ionize the interstellar medium and re-ionized the early intergalactic medium. Understanding stellar structure and evolution is fundamental. While stellar structure and evolution are understood

in general terms, we lack important physical ingredients, despite extensive research during recent decades. Classical spectroscopy, photometry, astrometry and interferometry of stars have traditionally been used as observational constraints to deduce the internal stellar physics. Unfortunately, these types of observations only allow the tuning of the basic common physics laws under stellar conditions with relatively poor precision. The situation is even more worrisome for unknown aspects of the physics and dynamics in stars. These are usually dealt with by using parameterised descriptions of, e.g., the treatments of convection, rotation, angular momentum transport, the equation of state, atomic diffusion and settling of elements, magneto-hydrodynamical processes, a

Metabolic inhibitors and receptor antagonists are indispensable tools for the molecular life scientist. By blocking specific enzymes or receptor-mediated signal transduction cascades, they simplify the analysis of complex cellular processes especially when it is essential to demonstrate that a process of interest is functionally linked to a particular enzyme or receptor. From antibiotics to statins, modern medicine relies on the reliability and ease-of-use of enzyme- and receptor-directed inhibitors and antagonists. The Inhibitor

The Cauchy transform of a measure on the circle is a subject of both classical and current interest with a sizable literature. This book is a thorough, well-documented, and readable survey of this literature and includes full proofs of the main results of the subject. This book also covers more recent perturbation theory as covered by Clark, Poltoratski, and Aleksandrov and contains an indepth treatment of Clark measures.

Symplectic geometry is a central topic of current research in mathematics. Indeed, symplectic methods are key ingredients in the study of dynamical systems, differential equations, algebraic geometry, topology, mathematical physics and representations of Lie groups. This book is a

true introduction to symplectic geometry, assuming only a general background in analysis and familiarity with linear algebra. It starts with the basics of the geometry of symplectic vector spaces. Then, symplectic manifolds are defined and explored. In addition to the essential classic results, such as Darboux's theorem, more recent results and ideas are also included here, such as symplectic capacity and pseudoholomorphic

curves. These ideas have revolutionized the subject. The main examples of symplectic manifolds are given, including the cotangent bundle, Kahler manifolds, and coadjoint orbits. Further principal ideas are carefully examined, such as Hamiltonian vector fields, the Poisson bracket, and connections with contact manifolds. Berndt describes some of the close connections between symplectic geometry and mathematical physics in

the last two chapters of the book. In particular, the moment map is defined and explored, both mathematically and in its relation to physics. He also introduces symplectic reduction, which is an important tool for reducing the number of variables in a physical system and for constructing new symplectic manifolds from old. The final chapter is on quantization, which uses symplectic methods to take classical mechanics

to quantum mechanics. This section includes a discussion of the Heisenberg group and the Weil (or metaplectic) representation of the symplectic group. Several appendices provide background material on vector bundles, on cohomology, and on Lie groups and Lie algebras and their representations. Berndt's presentation of symplectic geometry is a clear and concise introduction to the major methods and applications

of the subject, and requires only a minimum of prerequisites. This book would be an excellent text for a graduate course or as a source for anyone who wishes to learn about symplectic geometry. As a result of prevailing monetary conditions since the global financial crisis, the world has witnessed unprecedented growth in global corporate credit markets. Yet, despite the trillions of dollars put to work in the debt capital markets,

corporate credit is still an unfamiliar concept to most investors compared to other asset classes, such as equities and commodities. Every red-top newspaper and 24-hour news service is happy to report the latest twitch in the Dow, FTSE or Stoxx indices but momentous moves in the iBoxx or iTraxx go unmentioned. And whereas many a talking head is happy to pose as an equity analyst, few feel comfortable venturing into the arcana

of credit. Yet the corporate credit market, as the authors of this new book show, is both materially larger than its equity peer and has shown more attractive risk/reward characteristics over the last 90-odd years. In Opening Credit, career credit professionals, Justin McGowan and Duncan Sankey, aim to redress this by drawing on their more than 50 years' collective experience in the field to elucidate a practitioner's

approach to corporate credit investment. Whilst explaining the basics of traditional credit analysis and affirming its value, McGowan and Sankey also caution against its shortcomings. They demonstrate the need both to penetrate the veil of accounting to get to the economic reality behind the annuals and interim numbers and to analyse the individuals that drive them - the key executives and board members. They employ a range of cogent and easy-

to-follow case studies to illustrate the value of their executive- and governance-led approach, which places management front and centre in understanding corporate credit. Opening Credit will appeal to all those seeking a better understanding of corporate credit, including analysts looking to develop their skills, fund managers (especially those with an eye to SRI), bankers, IFAs, financial journalists, academics and students

of finance.

Most people want out of North Korea. Wendy Simmons wanted in. In *My Holiday in North Korea: The Funniest/Worst Place on Earth*, Wendy shares a glimpse of North Korea as it's never been seen before. Even though it's the scariest place on Earth, somehow Wendy forgot to check her sense of humor at the border. But Wendy's initial amusement and bewilderment soon turned to frustration and growing paranoia. Before long, she learned the essential conundrum of tourism in North Korea: Travel is truly a love affair. But, just like love,

its a two-way street. And North Korea deprives you of all this. They want you to fall in love with the singular vision of the country theyre willing to show you and nothing more. Through poignant, laugh-out-loud essays and 92 never-before-published color photographs of North Korea, Wendy chronicles one of the strangest vacations ever. Along the way, she bares all while undergoing an inner journey as convoluted as the country itself. Is there any way to talk theologically about the Trinity and place? God's triunity? In *The Place of the Spirit*, Sarah Morice-Brubaker considers how anxieties about place have influenced Trinitarian theology - both what it is asked to do and the language in which it is expressed. When one is nervous about collapsing God into created horizons, she suggests, one is apt to come up with a model of Trinity that refuses place. Distance becomes a primary way of situating the divine persons in relations to each other. Conversely, theologians who wish to avoid a too-remote God likewise recruit Trinitarian language to suit that purpose. They, too, use

language that encourages the importance of place, expressing triunity in terms of coinherence and mutual indwelling. And yet, suggests Morice- Brubaker, the question has received full-on attention in other areas of ethics, philosophy, and systematic theology. The Place of the Spirit calls for Trinitarian thought to avail itself of those insights and offers some ways in which it may do so. The duration of large-scale violent civil conflict increases substantially if the society is composed of a few large ethnic groups, if there is extensive forest cover, and if the conflict has commenced since 1980.

None of these factors affect the initiation of conflict. And neither the duration nor the initiation of conflict is affected by initial inequality or political repression.

Mathematical physics has made enormous strides over the past few decades, with the emergence of many new disciplines and with revolutionary advances in old disciplines. One of the especially interesting features is the link between developments in mathematical physics and in pure mathematics. Many of the exciting advances in mathematics owe their origin to mathematical physics — superstring theory, for example, has

The beginning of a new millennium is an appropriate time to survey the present state of the field and look forward to likely advances in the future. Finny Philip inquires into Paul's initial thoughts on the Holy Spirit. Paul's conviction that he was called to be an apostle to the Gentiles and that God bestowed the Spirit upon the Gentiles apart from Torah obedience is the basis for any inquiry on this subject. Central to Philip's argument is Paul's conviction that God graciously endowed his Gentile converts with the gift of the Spirit, an understanding that is rooted primarily in his conversion experience and secondarily in his experience with and as a missionary of the Hellenistic community in Antioch. In examining the range of expectations of the Spirit that were present in both Hebrew scripture and in the wider Jewish literature, the author comes to the conclusion that such a concept is

Bookmark File PDF Wolfson Group Daniel Schatzman

rare, and that it is usually the covenant community to which the promise of the Spirit is given. Furthermore, Paul's own pre-Christian convictions about the Spirit, a result of his own self-perception as a Pharisee and persecutor of the church, display continuity between his thought patterns and those of Second Temple Judaism. Paul's Damascus experience was an experience of the Spirit. His experience of the glory of God in the face of Jesus Christ (2 Cor. 3:1-4:6) provided him with the belief that there was now a new relationship with God, which was possible through the sphere of the Spirit. In addition, Paul was influenced by the Hellenists, whose theological beliefs included the perception of the church as the eschatological temple in which the Spirit of God is the manifest presence

of God. It is in these notions that one may trace the origins of Paul's thoughts on the Holy Spirit.

and more. In two volumes, this book elucidates the crucial mechanisms that control the dynamics of phosphoinositide conversion. Starting out from phosphatidylinositol, a chain of lipid kinases collaborates to generate the oncogenic lipid phosphatidylinositol(3,4,5)-trisphosphate. For every phosphate group added, there are specific lipid kinases - and phosphatases to remove it. Additionally, phospholipases can cleave off the inositol head group and generate poly-phosphoinositols, which act as soluble signals in the cytosol. Volume I untangles the web of these enzymes and their products, and relates them to function in health and disease. Phosphoinositide 3-kinases and

3-phosphatases have received a special focus in volume I, and recent therapeutic developments in human disease are presented along with a historical perspective illustrating the impressive progress in the field.

The architecture in Shenandoah matters. It is climate adapted: large porches and windows allow for cross breezes and natural lighting. It is fanciful: there are arches, elaborate chimneys, clay tiles roofs, and textured coral rock. For many residents, it reminds them of places where they grew up, from old Cuba to the mid-west. It makes people happy. There is a newfound appreciation of all of the neighborhood conveniences that

Varied housing options, from apartments to single-family homes. Beautiful historic architecture. As Shenandoah becomes more popular, it is receiving more and more attention and investment. There are references to clothing throughout Paul's letters, and the metaphor constitutes a significant aspect of his theology.

The imagery appears several times in his letters: clothing with Christ (Gal 3:27; Rom 13:14), clothing with the new man (Col 3:9-10; Eph 4:22-24), and clothing with the resurrection body (1 Cor 15:49, 50-54; 2Cor 5:1-4). In order to understand the background to this use of the

clothing metaphor, Jung Hoon Kim examines similar imagery in the Old Testament, 1 and 2 Enoch, the Apocalypse of Moses, Philo, rabbinic literature, Joseph and Aseneth, the Hymn of the Pearl, and Apuleius's Metamorphoses. He also discusses the Roman custom of clothing and the baptismal praxis of the ancient church. Kim concludes that Paul's metaphor suggests the life and glory of the image of God, which were lost by Adam, have been restored by baptism in Christ, and
