A dark, engrossing, blood-drenched tale of the familiar threats to female power—and one girl’s journey to regain it. Five starred reviews greeted this powerful story from Elana K. Arnold, author of the Printz Honor winner Damsel. You are alone in the woods, seen only by the unblinking yellow moon. Your hands are empty. You are nearly naked. And the wolf is angry. Since her grandmother became her caretaker when she was four years old, Bisou Martel has lived a quiet life in a little house in Seattle. She’s kept mostly to herself. She’s been good. But then comes the night of homecoming, when she finds herself running for her life over roots and between trees, a fury of claws and teeth behind her. A wolf attacks. Bisou fights back. A new moon rises. And with it, questions. About the blood in Bisou’s past, and on her hands as she stumbles home. About broken boys and vicious wolves. About girls lost in the woods—frightened, but not alone. This book presents first-year calculus roughly in the order

in which it was first discovered. The first two chapters show how the ancient calculations of practical problems led to infinite series, differential and integral calculus and to differential equations. The establishment of mathematical rigour for these subjects in the 19th century for one and several variables is treated in chapters III and IV. Many quotations are included to give the flavor of the history. The text is complemented by a large number of examples, calculations and mathematical pictures and will provide stimulating and enjoyable reading for students, teachers, as well as researchers.

Barry Joe McDonagh ("Joe Barry"), a native of Ireland, developed his anti-anxiety plan while studying at the University College of Dublin (UCD). His thoughts on anxiety and panic disorders were first published in 2001. Based on hard science and years of experience helping people who suffer from anxiety, Barry McDonagh has perfected the way to overcome anxiety and get people back to living life to the fullest. You will not only learn how to end your anxiety

Going beyond the message of Lean In and The Confidence Code, Gannett's Chief Content Officer contends that to achieve parity in the office, women don't have to change—men do—and in this inclusive and realistic handbook, offers solutions to help professionals solve gender gap issues and achieve parity at work.

Companies with more women in senior leadership perform better by virtually every financial measure, and women employees help boost creativity and can temper risky behavior—such as the financial gambles behind the 2008 economic collapse. Yet in the United States, ninety-five percent of Fortune 500 chief executives are men, and women hold only seventeen percent of seats on corporate boards. More men are reaching across the gender divide, genuinely trying to reinvent the culture and transform the way we work together. Despite these good intentions, fumbles, missteps, frustration, and misunderstanding continue to inflict real and lasting damage on women’s careers. What can the Enron scandal teach us about the way men and women communicate professionally? How does brain circuitry help explain men’s fear of women’s emotions at work? Why did Kimberly Clark blindly have an all-male team of executives in charge of their Kotex tampon line? In *That’s What She Said*, veteran media executive Joanne Lipman raises these intriguing questions and more to find workable solutions that individual managers, organizations, and policy makers can employ to make work more equitable and rewarding for all professionals. Filled with illuminating anecdotes, data from the most recent

relevant studies, and stories from Lipman’s own journey to the top of a male-dominated industry, That’s What She Said is a book about success that persuasively shows why empowering women as true equals is an essential goal for us all—and offers a roadmap for getting there.

A NEW YORK TIMES BESTSELLER A TikTok sensation, this rom-com about a young woman who agrees to fake date a colleague and bring him to her sister’s wedding has “everything you could want in a romance” (Helen Hoang, New York Times bestselling author). Catalina Martín desperately needs a date to her sister’s wedding. Especially since her little white lie about her American boyfriend has spiralled out of control. Now everyone she knows—including her ex and his fiancée—will be there and eager to meet him. She only has four weeks to find someone willing to cross the Atlantic and aid in her deception. New York to Spain is no short flight and her raucous family won’t be easy to fool. Enter Aaron Blackford—her tall, handsome, condescending colleague—who surprisingly offers to step in. She’d rather refuse; never has there been a more aggravating, blood-boiling, and insufferable man. But Catalina is desperate, and as the wedding draws nearer, Aaron looks like her

best option. And she begins to realize he might not be as terrible in the real world as he is at the office.

When a Christian boy disappears in a fictional Eastern European town in the 1920s, the local Jews are quickly accused of ritual murder. There is tension in the air and a pogrom threatens to erupt. Suddenly, an extraordinary man—Moshe the dreamer, a madman and mystic—steps forward and confesses to a crime he did not commit, in a vain attempt to save his people from certain death. The community gathers to hear his last words—a plea for silence—and everyone present takes an oath: whoever survives the impending tragedy must never speak of the town's last days and nights of terror. For fifty years the sole survivor keeps his oath—until he meets a man whose life depends on hearing the story, and one man's loyalty to the dead confronts head-on another's reason to go on living. One of Wiesel's strongest early novels, this timeless parable about the Jews and their enemies, about hate, family, friendship, and silence, is as powerful, haunting, and significant as it was when first published in 1973.

THE NEW YORK TIMES BESTSELLER! "I had the choice to come back ... or not. I chose to return when I realized that 'heaven' is a state, not a place" In this truly inspirational memoir, Anita Moorjani relates how, after fighting cancer for almost four years, her body began shutting down—overwhelmed by the malignant cells spreading throughout her system. As her organs failed, she entered into an extraordinary near-death experience where she realized her inherent worth . . . and the actual cause of her disease. Upon regaining consciousness, Anita found that her condition had improved so rapidly that she was released from the hospital within weeks—without a trace of cancer in her body! Within this enhanced e-book, Anita recounts—in words and on video—stories of her childhood in Hong Kong, her challenge to establish her career and find true love, as well as how she eventually ended up in that hospital bed where she defied all medical knowledge. In "Dying to Be Me," Anita Freely shares all she has learned about illness, healing, fear, "being love," and the true magnificence of each and every human being!

1895. New York. Gabriel Webster's pack is in trouble. His father's failing health and his mother's untimely death mean that the vultures are circling. It won't be long before his family's assets are stripped and his pack disbanded. When an offer of help arrives in the form of a marriage of convenience, he has little choice but to accept. The arrangement would be the perfect solution, if not for one thing. Gabriel is to marry Nathaniel Hayward, the Alpha who was badly injured in the accident that killed his brother ten years before--and the man Gabriel has been in love with for as long as he can remember. Trapped in a business arrangement masquerading as a marriage--in a strange, empty house with a damaged husband who barely tolerates him--isn't what Gabriel expected from life. But sometimes the last thing we want is the beginning of something more. And an ending can be the start of something beautiful....56k words A standalone story set in the Homestead universe.

This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions. Forced by her cruel father to wed his most despised enemy, the debauched Earl of Whitby, Lady Noelle Rivers is determined not to allow her spouse to win her love, much less her virtue. Precise approach with definitions, theorems, proofs, examples and exercises. Topics include partial differentiation, vectors, differential geometry, Stieltjes integral, infinite series, gamma function, Fourier series, Laplace transform, much more. Numerous graded exercises with selected answers.

The main purpose of this book is to provide a concise introduction to the methods and philosophy of constructing nonstandard finite difference schemes and illustrate how such techniques can be applied to several important problems. Chapter 1 gives an overview of the subject and summarizes previous work. Chapters 2 and 3 consider in detail the construction and numerical implementation of schemes for physical problems involving convection-

diffusion-reaction equations, that arise in groundwater pollution and scattering of electromagnetic waves using Maxwell's equations. Chapter 4 examines certain mathematical issues related to the nonstandard discretization of competitive and cooperative models for ecology. The application chapters illustrate well the power of nonstandard methods. In particular, for the same accuracy as obtained by standard techniques, larger step sizes can be used. This volume will satisfy the needs of scientists, engineers, and mathematicians who wish to know how to construct nonstandard schemes and see how these are applied to obtain numerical solutions of the differential equations which arise in the study of nonlinear dynamical systems modeling important physical phenomena.
